Klinkmann Automation

Value-Add Distributor
A ROCKWELL AUTOMATION PARTNER

SIMATIC - ROCKWELL LOGIX CONVERSIONS

Our Technical Services – Vast Experience Secures the Best Solutions

Our team has a long history of working with both Siemens (S5, S7, S7-TIA) and Rockwell Logix platforms. We know the possibilities of the Siemens (Step 5, Step 7, TIA, WinCC) and the Rockwell development environments (RSLogix 500, Studio 5000, FactoryTalk View).

Klinkmann provides designing services supporting the Siemens and Rockwell systems for several Finnish and global machine building and manufacturing companies.

Example of our conversion service:

We familiarize ourselves with the functionality of the customer's controlled devices and the Simatic program codes, and agree the scope of the work with the customer.

✓ We do conversions of the Simatic application codes to Rockwell environment.

✓ We document the Rockwell program structures.

✓ We test the converted Rockwell software together with the customer. If needed, we can also take care of deploying the customer project at the manufacturing site.

✓ We train the customer to use Rockwell's development and application environments.
