- **Terminal blocks for electrical boards**

  Terminal blocks for electrical panels, polyamide screw-clamp and spring-clamp terminal blocks, control terminal boards, high-current terminal boards, mobile terminal blocks, distribution terminal boards, 12-pole polyamide terminal boards

- **Electronic products for electrical boards**

  power supplies, analog modules, relay modules, signal converters

- **Connection systems for photovoltaic plants**

  Connectors, tools, cables, brackets for mounting of photovoltaic panels, string boxes, control units, monitoring systems, surge protection devices, diodes, fuse-holders

- **Industrial marking systems**

  printing systems, tags and accessories for wire and terminal block identification, tags for contactors and buttons, modular strips for distribution panels, panel identification tags, labels and signboards

Cabur 1952 2014

Shortly after its foundation, back in 1952, Cabur became a leading manufacturer of electrical panel terminal blocks, by focusing on installers' needs and providing leading edge technical solutions that, in some cases, would become popular in the industry.
In particular, in our product design and manufacturing, we have pioneered a quality focus on raw materials, functionality, reliability over time, and respect for the environment. That is the reason why Cabur was granted Class 1E (Equipment for Nuclear Power Generating Stations) qualification as early as in 1985 and, in addition, the ISO 9001 (Quality) and ISO 14001 (Environment) certifications, as well as Notification of production in compliance with the ATEX Directive and the Certification Scheme IEC Ex for "Ex e" installations on the most important terminal block lines.

UNI EN-ISO 14001

UNI EN-ISO 9001

The headquarter

In 2006 Cabur invested in an advanced 15.000 sqm production site in Altare (SV). By doubling the production surface and increasing the staff with the recruitment of new people enabled the company to to rationalise the production processes, logistics, and sales, and increase their efficiency.
Cabur develops and produces a wide range of products for the electric and electronic industry, based on its own projects, which are well known for their reliability even in extrem deployment conditions and are produced to satisfy the various and complex needs of installator and end users.

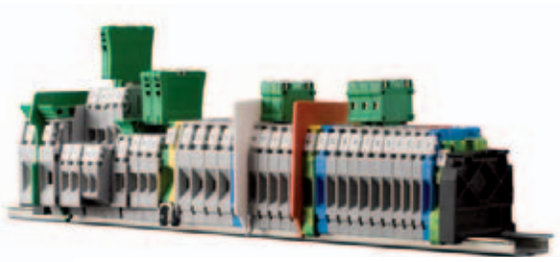
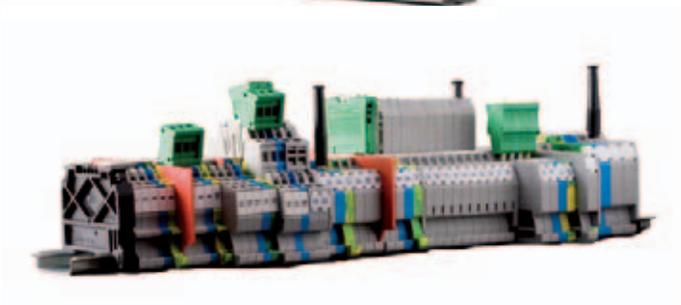
Product range



With over 60 years of experience, Cabur develops and produces, by its own designs, a wide range of products for the electrical industry, providing the best in working conditions, in terms of operability and reliability.

Current production of:

- **Terminal blocks for electrical boards**
- **Electronic products for electrical boards**
- **Installation products**
- **Connection systems for photovoltaic equipments**
- **Industrial marking systems**

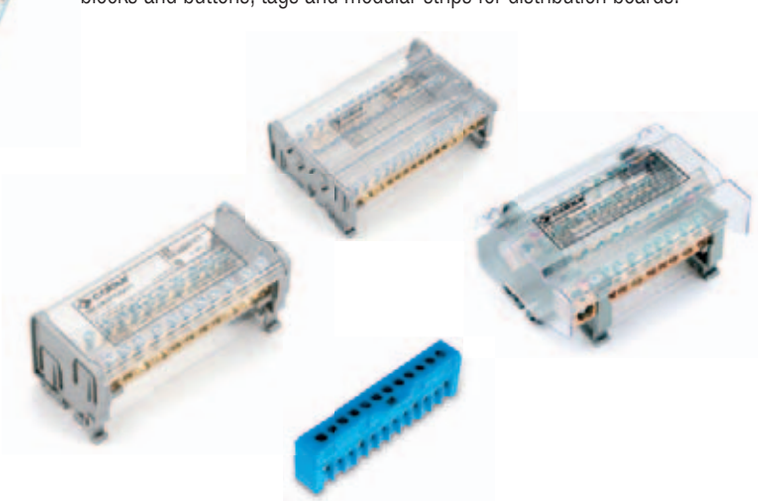


Fully meets users' varied and complex installation needs.
Our varied and diversified production represents the optimal synthesis of Cabur's long experience as partner of Italy's most important Industries and Research Laboratories, combined with foreign activities and collaboration, always with the aim of pinpointing and meeting users' installation needs.

In particular as a result of a specific planning decision, products in our "standard" series are designed to meet the fundamental requirements of the most severe installation conditions and environments, thus avoiding to produce special product series for specific applications. This kind of planning has determined a clear qualitative improvement in the entire production, as well as a more streamlined and simplified product management, first of all to the advantage of the Distribution, which can guarantee to final Clients the most efficient service.

In addition to terminal blocks, Cabur product offering features a full range of electronic products for electric panels for plant and machine automation and process control. These products are designed for an easy deploy and for easy material management, thanks to the use of innovative and leading-edge technology.

The **line of products for industrial marking completes** the range with innovative printing solutions, labels for wires, terminal blocks and buttons, tags and modular strips for distribution boards.



Highest ...mass produced quality

We guarantee top performance of our contacts and maximum flexibility of connection solutions.
A full range of standard products for automation panels is available at all major Wholesalers. Full support is provided by Cabur sales force both in Italy and in over 30 countries abroad, as well as by our Engineers, in order to provide our clients with the best installation solutions.

The new www.cabur.eu web site

On our web site, our customers and industry operators can always get up-to-date information on new products and sales offers.
The data sheets of all Cabur products, including the items in this catalogue, are available online in electronic format, with a completely renewed data base structure, that can be consulted by its index or queried with an advanced research engine.

Moreover, on our web site you can:
- ask our specialists for technical information and application advice
- contact our sales staff and ask them for estimates
- download manuals and other technical literature
- get access to quality and compliance certificates
- look at our latest sales literature
- ask for free catalogues and brochures
- … and much more.

By this newsletter, Cabur communicates also via e-mail its main innovations and commercial activities to all those who apply for it through the registration form.
In conclusion, Cabur web site (**www.cabur.eu**) is the ideal tool to get real time information and contacts with our company...

ISO 9001 CSQ Certification

Until recently, Cabur "Quality" was simply recognised through the appreciation of its customers. This has allowed the company to become a leader in Italy in the design, production and distribution of "terminal blocks for electrical panels" and, more recently, to extend its products offering to the segment of "electronic products" with recognised reliability levels in both Italian and foreign markets.
Obviously, this cannot be the result of improvisation, but of a constant organisation process begun back in 1985 with the definition and implementation of a Quality Assurance Programme based on ANSI N 45.2 (referred to the particularly severe nuclear environment) that has involved the entire structure of the Company and has made each function and worker responsible for quality standards. Since 1995, CSQ (international institute for the certification of business quality systems) has certified the Quality system designed and adopted by Cabur. The Quality system refers to the most complete and severe standard amongst UNI EN ISO 9000 series defining the requirements for Total Quality in Companies, that is ISO 9001, including the activities of Product Design, Development, Manufacturing and Customer Service.
After the issue of the new Edition of the Standard (ISO 9001:2008), the whole Quality System has been revised and renewed to be fully compliant with the new regulations.

CSQ
CERTIFICAZIONE DEI SISTEMI QUALITÀ DELLE AZIENDE

UNI EN-ISO 9001

**THE QUALITY OF OUR PRODUCTS IS JUDGED BY OUR CUSTOMERS.
OUR QUALITY ASSURANCE SYSTEM IS CERTIFIED BY CSQ.**

ISO 14001 CSQ Certification

In its continuous improvement process, CABUR has adopted an environmental management system since 2001, obtaining the international CSQ UNI EN 14001 recognition.
This goal represents a guarantee given of the respect Cabur has for the surrounding environment as well as a demonstration of the adoption of environmental safeguard rules and, additionally, a pledge for constant ecological improvement.
This kind of Certification is still quite uncommon in Italy; Cabur has nevertheless been able to achieve and add it to its corporate philosophy, which is always aimed at the anticipation, rather than to the passive adaptation, of those needs that are becoming more and more urgent and global. Environment is undoubtedly one of these issues and, anticipating many other companies, not only in Italy, Cabur firmly decided to adopt a system that monitors and prevents environmental risk, inherent to every stage of its manufacturing process. Operational procedures and other paper documentation were unified and harmonised with the running Quality Assurance System and the manual, becoming of both Quality and Environmental Management, is now a complete reference point. The Quality Assurance and Environmental Management Department is at your complete disposal to provide any further information and/or clarification on the entire Quality / Environment System and Customer Service. Cabur can provide you with a copy of both CSQ and EQNET certificates, or with a copy of the Quality and Environmental Management manual.

UNI EN-ISO 14001

The 2002/95/CE Directive

Directive 2011/65/CE, known as RoHS 2, sets limits to the use of specific dangerous materials, listed in Annex II of the Directive, in electric and electronic devices.

The Directive applies exclusively to devices included in the following categories, as listed in attachment 1, i.e.:

1. Large appliances
2. Small appliances
3. IT and telecommunication appliances
4. Consumers' appliances
5. Lighting appliances
6. Electric and electronic tools.
7. Toys and devices for hobbies and sports
8. Medical devices
9. Monitors and control instruments, including industrial monitoring and control instruments
10. Vending machines

Cabur Products' compliance to RoHS Directive

Products like terminal blocks and connectors are not considered electric or electronic appliances; nevertheless, in consideration of the needs of those Customers deploying these products into appliances and devices which are subject to the Directive, Cabur has decided to review its production to make it RoHS compliant.

From 2006, with the introduction of the former 2002/95/CE Directive, we have been disposing of non-compliant items, completely eliminating – wherever possible – the dangerous material and substances listed in Annex II from components in our production, with a Zero Tolerance mindset. Those materials remain in limited quantity, well below the limits set by the Directive, only in those components that cannot be efficiently and effectively produced with available alternative technological solutions.

Further information and updates are always available on www.cabur.eu.

Our staff is available for further details both on our products and on the application of the RoHS Directive.

CE Marking

All products in this catalogue meet all EU applicable standards when the catalogue was printed. Therefore, all required CE markings are placed on the products and on all product related documents.

Do not hesitate to contact our staff for any further information and/or explanations on Reference Standards. Cabur Customer Service can provide you with certificates of compliance to Reference Standards, type approvals, and CE markings.

Product Quality Assurance Notification according to ATEX 94/9/EC Directive and the Certification Scheme IEC Ex

The procedure for renewal of the Product Quality Assurance Notification, granted to our Company, in 2001, as a manufacturer of equipment intended for use in potentially explosive atmospheres (increased safety measures) and according to the requirements given by **"ATEX" Directive 94/9/EC**, has been completed with a positive outcome. It was renewed in 2008.
In 2007, activities relating to the part of the System were also judged to be perfectly suitable to meeting the requirements established by Certification Scheme IEC Ex, with the issue by the O.N. of the QAR (Quality Assessment Report) No. IT/CES/QAR07.0004/00, according to Certification Scheme IEC Ex. This recognition is of global importance.
The Product Quality Assurance Notification has been the most demanding stage in the process of Ex e Certificates conversion, which have been issued on the basis of the requirements given by elder European Directives, into updated documents.
The Notification procedure has included a first stage, characterised by the documentation analysis (Quality/Environment Manual + ATEX Quality Plan + Operational procedures), following which a preliminary visit took place (carried out at the Notifying Body premises).
Once the first step was successfully completed, the second (namely the Company Notification) took part and was carried out with the Certification visit.

ATEX Product Quality Assurance Notification

The relevant Notification number, granted by the Notifying Body is the following:

CESI 02 ATEX 028 Q

Our Quality and Environmental Management System today is consequently perfectly updated in order to fulfil also **ATEX** and **IEC Ex** Directive. As in the occasion of the Environmental Management Certification, the ATEX Notification represents a significant goal achieved in the **continual improvement** path.

Terminal blocks approved in conformity to ATEX 94/9/CE Directive

"increased safety" **(Ex e)** terminal blocks are manufactured according to IEC EN 60079-0 / IEC EN 60079-7 / IEC EN 61241-0 Stds. and bear, on the insulating body, the name of the product and the electrical characteristics.

ATEX Marking:
0722 Ⓔx **I M2 / II 2 G D**

0722	= number of the Notifying Body (CESI) for the ATEX surveillance
I M2	= group **I** (mines), category **M2**
II 2 G D	= group **II** (surface), category **2 G** (gas) **D** (dust)
Ex e	= type of protection
V	= rated voltage

The marking CE indicates the Conformity to UE 2006/95/CE Directive (Low Voltage).

IEC Ex Marking:

Ex e	= safer protection mode
II	= group **II** (surface)

Terminal blocks must be installed in Ex e enclosures; the enclosure / terminal blocks assembly must be subjected to separate certification.

The currents allowed for each terminal block, when used in potentially explosive environments (Ex e), are listed in the separated Certificate, granted to the assembly formed by terminal blocks + enclosure.

Rail assembly composition in potentially explosive (Ex e) environments

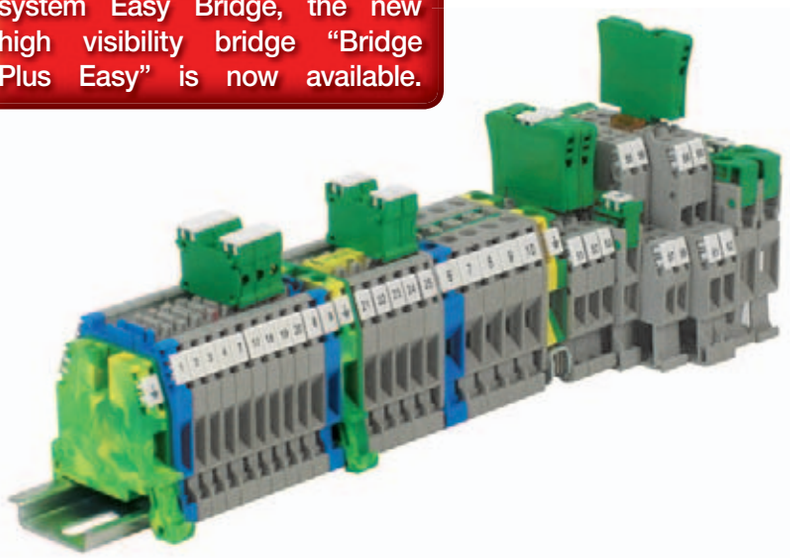
Each terminal block can be connected to contiguous elements by means of fixed cross-connections which are made unloosening by means of an elastic washer located under the head of the screw.
For fixed cross-connections it is necessary to keep well separated the different phases, by interposing a coloured partition, having a thickness of 1.5 mm, between adjoining cross connections and between cross connections and adjoining terminal blocks.
The multiple cross connection, by means of the commoning bar, can be connected to different terminal blocks, provided that they are adjoining one to another.

CBC Series

with UL94V-0 polyamide insulating body

- UL94V-0
- reduced overall dimension
- patented “Easy bridge” system: double possibility to insert PTC multi-pole cross-connections, without the need of insulating protection
- mounting onto PR/3 type rails, according to IEC 60715 Std., “TH/35” type
- available in grey RAL 7042
- **CESI 08 ATEX 061 U** Ex e ⟨Ex⟩ certificate
  I M2 / II 2 G D
  operating temperature range: –40 ÷ +80 °C
- **CoC IEC Ex N. CES 09.0002U** Ex e II

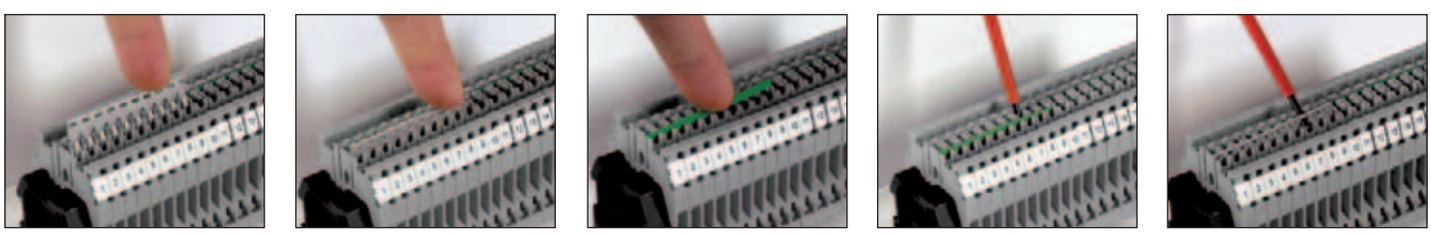
In addition to the traditional system Easy Bridge, the new high visibility bridge “Bridge Plus Easy” is now available.



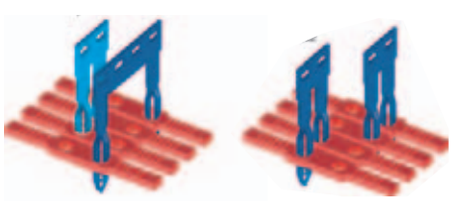
The design accuracy allows that terminal blocks having different cross-sections can nevertheless guarantee visual uniformity once the rail assembly is made.

Easy Bridge System

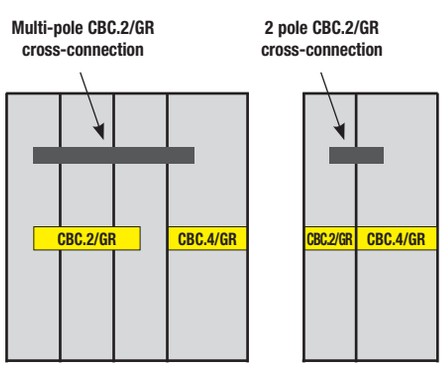
The cross-connection can be supplied in “standard” sizes, for 2-3-5-10 poles, or alternatively in lengths of 250 mm.



1 2 3 4 5



The “Easy Bridge” connection system guarantees the most diversified transversal connecting possibilities, even staggered.



The jumpers can be used to connect in parallel terminal blocks having equal cross-section and the first of the adjoining group of terminal blocks of different size.

1-2 After having cut the bar according to the number of poles, insert the cross-connection, in the appropriate groove of the terminal block. At this point, by using the blade of a screwdriver, push down the cross-connection until it reaches its blocking point. The cross connection will be fully insulated and intrinsically IPXXB protected.

3-4 After having mounted the cross-connection, the connected poles can be outlined and detected by placing the PTC/SP green strip. This strip is supplied in a standard length of 100 mm and it can be easy cut to the appropriate length with the aid of a cutter.

5 To remove the cross-connection, it is sufficient to remove the PTC/SP strip: insert the blade of the screwdriver in the jumper slot, then lift it up and finally extract it.

Terna LV 27/1

KEMA - KEUR The Netherlands

CESI ATEX Ex e Italy

Enel Distribuzione DV 27/1

R.I.NA. Italy

The CBD Series consists of eight sizes, featuring:
- reduced overall dimension
- high connecting capacity
- superior effective current carrying capacity, with respect to the prescribed reference values
- very low contact resistance of the resulting connection
- materials of excellent quality and, consequently, maximum reliability throughout time
- very practical usage

Cabur has always designated every product through a type reference, consisting of letters (usually 3) and a number, with an interposing full-stop.
With this number the **rated cross-section** of the terminal block itself has always been defined; this value, as the reference Standard states *"…is a value of connectable conductor cross-section, stated by the manufacturer, and to which certain thermal, mechanical and electrical requirements are referred"*.
Nevertheless, the application field of the terminal block is much wider and is defined by its **connecting capacity**, in other words the range of conductor sizes, both rigid and flexible, minimum and maximum, that a terminal block can connect, fully respecting all the parameters given by the reference standards.

In the following table, in fact, the "usual" type reference of every terminal block has been integrated with the addition, after the existing digits which retain the indication of the rated cross-section, of another numerical value (written in smaller characters, in red and separated by the digits indicating the rated cross-section by a /). This second group of digits represents, in mm^2, the **maximum size of the flexible conductor that can effectively be connected to the terminal block**. If rigid conductors (solid or stranded) are to be connected, reference must be always made to the indications given by the relevant technical characteristics of each product and under "connecting capacity"; in most cases in fact the size of the maximum rigid conductor is even greater.
By stating the wide connecting capacity feature, with the occasion some sizes among the CBD Series have been reconsidered; firmly maintaining the eight rated cross-sections, the existing types CBD.25 and CBD.35 have been reviewed and, after the actions and the verifications which have taken place, re-evaluated as **CBD.35** e **CBD.50**; the latter rated cross-section up to this point, has never considered within Cabur product range, but has nevertheless wide use.

Type	Rated cross section (mm^2)	Flexible conductor (mm^2)		Rigid conductor (mm^2)		Gauge	Max. current (A)
		min.	max.	min.	max.		
CBD.2/4	2,5	0,5	4	0,5	4	A3	29

CBD.6/10	6	0,5	10	0,5	10	A5	58
CBD.10/16	10	0,5	16	0,5	16	B6	77
CBD.16/25	16	0,5	25	0,5	25	B7	104
CBD.35/35	35	0,5	35	0,5	50	B8	147
CBD.50/50	50	1,5	50	1,0	70	B9	180
CBD.70/95	70	1,5	95	1,0	95	B11	250

type of connection:
by means of screws, on both sides, indirect and anti-loosening. The tightening screws are accessible only with an adequate screwdriver and the particular shape of the screws makes it impossible to lose them. The tightening process by means of screws ensures the best mechanical performance and efficiency of the current flow. It is suitable for the connection, with or without preparation of conductors of all cross-sections. The tightening and un-tightening operations are extremely simple and they can be carried out with tools, such as screwdrivers, which are always at hand. Its is however important to use an appropriately sized screwdriver in order to avoid the damaging either of the screw itself or the insulating body.

conducting body:
of the tube type **entirely of a copper and zinc alloy and treated with nickel-plating**; the characteristics of the material used and the manufacturing methods are such as to avoid the phenomenon of "seasoning cracking".

tightening reliability:
special orthogonal grooves on the bottom of the conducting body and on the lower surface of the pressure plates, ensure under all conditions the perfect electrical contact with the conductors and an efficient mechanical clamp. The grip is made particularly effective by the spring function of the pressure plate, which in a certain way and under the pushing action of the screws, tends to flex; in this way a reaction to the head of the screw itself, is exerted, resisting unscrewing, even under dynamic stress (vibrations).

ease of insertion:
insertion of the conductor into the terminal block is made easy by:
- sloping entrance planes on the insulating body
- the rounded edges of the pressure plate
- an appropriately sized entrance hole, with reference to the diameter of the maximum permitted conductor. The depth into which the conductor can be inserted is limited by a partition in the insulating body.

other functions:
besides their main as feed-through function, CBD terminal blocks are designed in such a way as to carry out other functions. In fact, by means of a prearranged threaded hole on the upper side of the conducting body it is possible:
- to create a cross-connection (either permanent or switchable) between two adjoining terminal blocks
- to create a multiple common bar connection between several adjoining terminal blocks
- to insert a socket for a test plug
- to insert a composable test plug for multiple signal shunting.

marking: all CBD terminal blocks can be marked on both sides by using CNU/8, SNZ or CSC marking tags (the latter system allows the composition of alphanumeric marking up to a maximum of 6 characters (an ADR/6 adapter though is required if more than 4 characters are to be inserted on each side).

mounting: CBD series polyamide terminal blocks are designed to be mounted on two types of rail, **"G32"** or **"TH/35"** (acc. to the IEC 60715), with obvious advantages towards supply, management and use in general of the product.

GPM Series high current terminal blocks

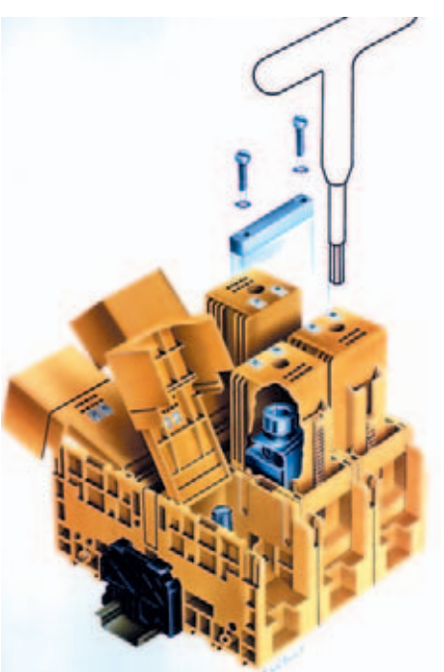
with UL94V-0 polyamide insulating body

- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., “G32” and “TH/35” types
- panel mount version available
- possibility to perform cross-connections
- available in /BB (bar-bar), /BC (bar-cable), /CC (cable-cable) versions
- available in beige RAL 1001 colour

tightening reliability: the reliability of the connection (cable-lugs or bars) is guaranteed by screw and nut clamping, with one flat and one spring washer, having the function of counteracting the effects of high dynamic stress. In the versions designed for the connection of conductors without special preparation, the reliability of the connection is assured by the special wrapping shape of the pressure plate. The spring reaction to the pressing force of the conductor works as a block under the head of the tightening screw, avoiding unloosening, even in presence of vibrations.
The conducting bar is also manufactured with an equivalent concave housing as to increase the clamping effectiveness on the conductors. In addition, the contact surfaces of both the pressure plate and the concave housing of the conducting busbar are provided, on their whole length, with cross grooving which improves the connection characteristics. The mechanical retention of the conductors guarantees low resistance of the resulting electrical contact.
warning protection: all the versions are contained in particularly articulated insulating bodies which guarantee an **IPXXB** degree of protection, without the need of any further accessory. Every insulating body, made in thermoplastic material, is manufactured in two specular half-shells which fit into each other by means of centring pins. In addition on the lower and internal part of the terminal block, eight embedding tabs give added safety to the terminal block itself. The side walls of the half-shells are stiffened and box like; this not only improves the aesthetic aspect of these large terminal blocks, but also guarantees improved stability and linearity to the entire installation. The different versions, obviously, have different but always innovative and original solutions to the problem of guaranteeing the IPXXB protection degree. In fact in appropriate seats inside the side walls of the half-shells the following may be inserted:

- **protection for the “bar” versions:** this protection, which in normal installation conditions is in a longitudinal position in respect to the axis of the terminal block, can be easily rotated with the simple aid of a screwdriver (as mentioned in the safety regulations). In this way, access can be guaranteed into the connection unit and for all the cable lugs or bars for tightening and loosening operations,
- **protection for the “cable” versions:** in this case the protection is fixed and has a click insertion. It is orthogonal to the axis of the terminal block and it protects the wire clamping collar, the pressure plate and the tightening screw.

This type of protection is provided with a “sliding gate” device, which is vertical to the terminal block protection and in line with the conductors insertion hole; it allows, with manual action with the best safety conditions, to close partially or totally the hole itself and to protect the live parts, when using conductors having a cross-section much lower than the rated one or when wiring the terminal block only on one side.



mounting: due to their large dimensions and as they bear high strain caused by the stress generated by the conductors, a new rail mounting system has been researched into and designed for them. These terminal blocks can be mounted on different types of rails (conf. to IEC 607155). The dismounting from the rail of the terminal block can take place with the aid of a simple screwdriver, inserted in the vent-hole of the mounting system itself (yellow part). If the rails themselves are to be installed on a straight wall, the size of GPM terminal blocks make the use of flat rail supports indispensable so that the terminals can be adequately distanced from the surface. For each terminal block, a /FIX version for the direct panel-mount is available.
marking: identification on both sides can be made on all the terminal blocks of GPM series, despite the size, with either CNU/8 type (2 elements) or CSC (up to 5 elements) marking tags. It is not necessary to use one or the other type: they can be used together.
cross-connection: with this series of products it is also possible to create a cross connection between two or three adjoining terminal blocks by using the appropriate jumper. The pre-cut diaphragm on the side wall of the insulating body must be removed before the insertion of this accessory. Even when the cross-connection is in place, the assembled terminal board provided with these accessories guarantees an IPXXB protection degree, without the need of any further cover.

GPM Series high current terminal blocks

with UL94V-0 polyamide insulating body

- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., "G32" and "TH/35" types
- panel-mount version available - M6 screw (screw with groove for screwdriver and washer recommended)
- possibility to perform parallel cross-connections
- available in beige RAL 1001 colour

GPM Series high current terminal blocks

with UL94V-0 polyamide insulating body

- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., "G32" and "TH/35" types
- panel-mount version available - M6 screw (screw with groove for screwdriver and washer recommended)
- possibility to perform parallel cross-connections
- available in beige RAL 1001 colour

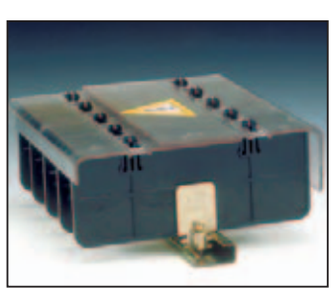
protection: ACB terminal blocks can be protected against direct and/or accidental contact by means of proper **PRT** type covers of different sizes: small, medium or big in self-extinguishing transparent material. These covers are supplied in standard length of 200 mm (corresponding to the total width of 4 adjoining blocks) and must be inserted on **SPS** supports), also in self-extinguishing material. PRT covers allow the protection of one side of the terminal block; the complete protection of the terminal board is obtained by two covers, which overlap.

PRT/P+SPS/1
- for ACB.70/BB and ACB.120/BB

PRT/M+SPS/5
- for ACB.70 and ACB.120 with clamping collar mounted

PRT/P+SPS/3
- for ACB.185/BB

PRT/M+SPS/7
- for ACB.185 with clamping collar mounted



PRT/G type must be used when the conductors come from the back of the board or, otherwise, when one or more connection points, not used, must be nevertheless protected.

MBL Series stud-type terminal blocks

with UL94V-0 polyamide insulating body

- stud connection, for cable lugs
- to be mounted onto PR/DIN type rails according to IEC 60715 Std., “G32” type

Stud terminal blocks suitable for the connection of bars or cable lugs, 30 mm max. width, to be mounted on PR/DIN type rails. **DUS/1** and **DUS/3** type barriers are provided to ensure the correct insulation distance between the different phases.

Whenever a safety cover is needed, the insulation function is guaranteed by the **SPS/5** support of the cover itself.

For the installation on limited longitudinal space where high density wiring is needed together with reliable insulation, special feed-through two/three level terminal blocks are available. The three level terminal blocks are suitable for circuits which are to be used and connected with specific equipment, as for example proximity sensors. In fact with the combined use of TLS.2 and TLD.2 terminal block, both the feeding and the signal carrying conductors of the proximity sensors can be economically and efficiently connected.
Particularly in the **TLS.2** terminal block, the intermediate and lower levels can be used to feed the sensors in d.c.; the feeding is distributed on the adjoining elements of the terminal board by means of a special **LOCK** connection system.

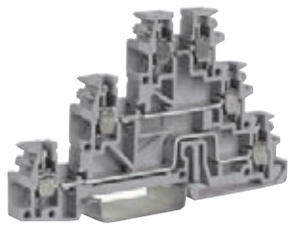
The above mentioned conducting bodies have a fork, pointed towards the exterior of the terminal block, which connects to the homologous element of the adjoining terminal block. The tightening of the resulting electrical contact is by means of a screw, already inserted in the threaded hole of the conducting bodies.
The LOCK system, above described, allows the connection of positive and negative poles, without the use of any other parallel cross connection. The conductors carrying the return signal from the sensor is connected to the upper feed-through level; the insertion, in the appropriate grooving of **PRP/5** coloured covers avoids any possible contact with the live parts, and allows an immediate identification of the polarity (Red for +, Blue for –).
TLD.2 terminal block is perfectly compatible with the **TLS.2** for the connection of proximity sensors, as it has the same electrical and mechanical characteristics. Two of six tightening units can be connected to the sensor feeding cables and distribute the power supply to the other sensors.
The cross-connection between the intermediate and lower levels of these terminal blocks to the contiguous ones of the TLS.2 can be performed by means of the two screws provided in the fork type conducting bodies of the TLS.2 – the first of the series – free from whatever connection; between the TLD.2 and TLS.2 terminal blocks a TLD/PI intermediate end section must be interposed, to ensure electric insulation of the TLD.2 terminal block conducting parts, which otherwise would be uncovered.
TLD.2 terminal block can also be used for other connecting applications, in other types of circuits.

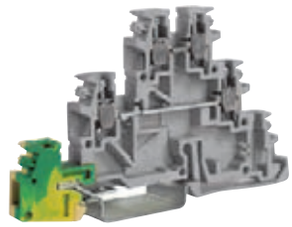
On two levels

with UL94V-0 polyamide insulating body

- 3 feed-through levels
- 3 levels + earth connection
- to be mounted onto TH 35-7,5 and TH 35-15 type rails - according to IEC 60715 Std.
- available in grey RAL 7042 and beige RAL 1001 colours

with earth connection on lower level





with earth connection on lower level and feed-through on intermediate and upper levels

Fuse-holders

with UL94V-0 polyamide insulating body

- for ø 5 x 20 mm fuses, with possibility to detect the fuse blow-out status, by means of a LED micro-circuit (CIL…)
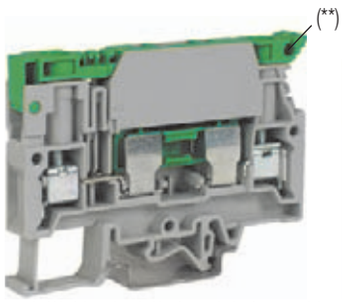
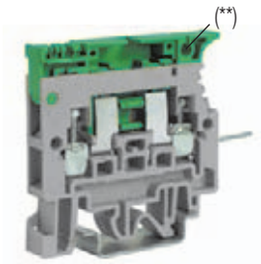
- standard versions available in grey RAL 7042 and beige RAL 1001 colours (where indicated)
- for ø 6.3 x 32 mm fuses
- with solder lug
- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., "G32" and "TH/35" types

Please, see page 136 (table) to determine the insulation voltage of the different PTC connection diagrams

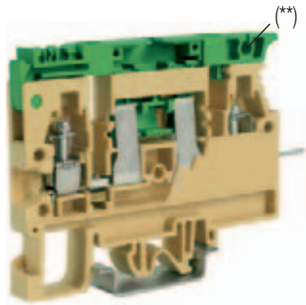
*The **/GR** tag indicates the grey colour version.*



The terminal block is equipped with a lever suited to house a ø 6.3 x 32 mm - 500 V fuse (not supplied)



4 x 0,8 mm solder lug



4 x 0,8 mm solder lug

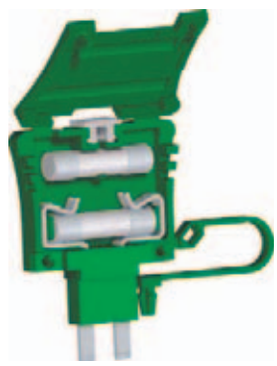
The cartridge can contain a spare fuse, instead of the LED signalling circuit.



APPROVALS

Approvals referred to the terminal blocks, on which the cartridge is mounted – see table

ACCESSORIES		Type	Cat. No.
Marking tag	printed or blank	**CNU/8/51**	NU0851
Tinned brass conductor	Ø 5 x 20 mm	**CO/5**	VL103
Cartridge / insert with 1 A diode		**SFR/I1A** (with 1 A diode)	SF992
Cartridge / insert with 3 A diode		**SFR/I3A** (with 3 A diode)	SF993

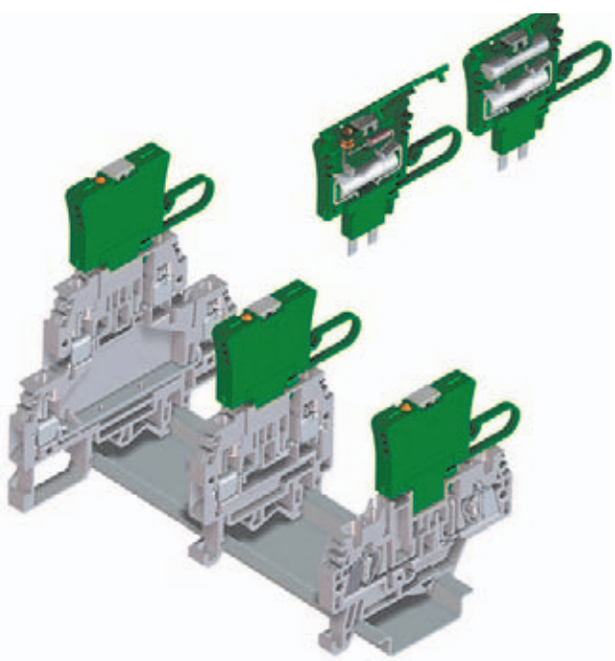
VERSIONI PREDISPOSTE		Type	Cat. No.
With non-polarized LED microcircuit	12 Vdc / Vac	**CPF/5L12**	CPF512
With non-polarized LED microcircuit	24 Vdc / Vac	**CPF/5L24**	CPF524
With non-polarized LED microcircuit	48 Vdc / Vac	**CPF/5L48**	CPF548
With non-polarized LED microcircuit	115 Vdc / Vac	**CPF/5L115**	CPF511
With non-polarized LED microcircuit	230 Vdc / Vac	**CPF/5L230**	CPF523
With 1 A diode (1N4001 ÷ 1N4007 types)		**CPF/5D1A**	CPF501
With 3 A diode (BY255 type)		**CPF/5D3A**	CPF503
With resistor 1200 Ω (1 W ± 5%)		**CPF/5R**	CPR05

Note:

(a) with fuse ø 5 x 20 mm, 250 V, Imax = 6,3 A – with brass pin Imax = 10 A

(b) total value, when the cartridge is mounted on terminals, considering as well the mounting rail:

Terminal block	Height on rail ⊐⊏ TH/35 7,5 (mm)	Height on rail ⊐⊏ TH/35 15 (mm)	Height on rail ⊏⊐ G32 (mm)
HMFA.2	57	75	-
MPFA.4	75	83	79
DSFA.4	96	104	100



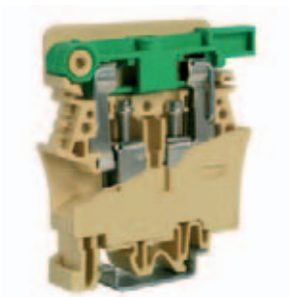
View of the different choices for mounting the cartridge respectively on terminals DSFA.4, MPFA.4 or HMFA.2.

When the cartridge is mounted on HMFA 2 terminals, adjoining one another, a terminal strip must be envisaged between one terminal and the next, because of the pitch differential between terminal and cartridge.

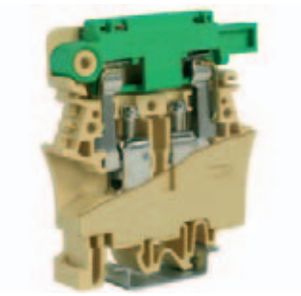
Fuse-holders

with UL94V-0 polyamide insulating body

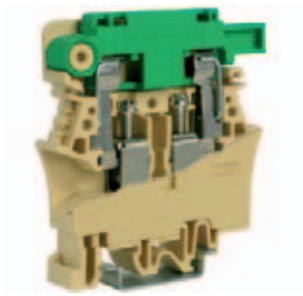
- for ø 6.3 x 32 mm fuses
- for ø 6.3 x 32 mm fuses, with possibility to detect the fuse blow-out status, by means of a LED micro-circuit (CIL…)
- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., G32 and "TH/35" types
- available in beige RAL 1001 colour



The terminal block is equipped with a lever suited to house a ø 6.3 x 32 mm - 500 V fuse (not supplied).



The terminal block is equipped with a lever suited to house a ø 6.3 x 32 mm - 500 V fuse and a non-polarised LED microcircuit. The interruption of the fuse determines the ignition of the LED. The terminal block can be supplied with the CIL circuit already mounted for the insertion of a non polarised LED circuit.



The terminal block is equipped with a lever suited to house a ø 6.3 x 32 mm - 500 V fuse and a neon lamp with incorporated resistance (our type LSN ø 6 x 26 mm - 380 V max) The interruption of the fuse determines the ignition of the lamp.

(*) value referred to the insulation characteristics of the terminal block
(**) for simultaneous disconnection of adjoining terminal blocks

Fuse-holders with LED circuit

with UL94V-0 polyamide insulating body

- for ø 5 x 20 mm fuses, with possibility to detect the fuse blow-out status, by means of a LED microcircuit (CIL…))
- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., "G32" and "TH/35" types
- with non-polarised LED microcircuits (CIL) to operate under a.c and/or d.c. and to detect the fuse blow-out status
- available in beige RAL 1001 colour

(*) value referred to the insulation characteristics of the terminal

The terminal block is equipped with a lever suited for the housing of our **F5** type - ø 5 x 20 mm **fuse.**

Non-polarized LED microcircuits (CILs) are inserted in an appropriate housing of the lever.

The interruption of the fuse determines the ignition of the LED.

Various versions, according to different voltages, are available.

F5 ø 5 x 20 mm fuse
(250 V - 5 A max)

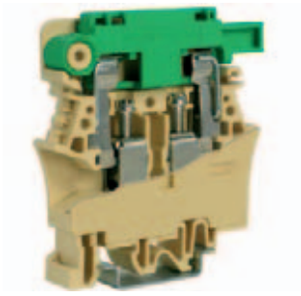
(**) The terminal blocks are equipped with a hole suited for the sealing of the lever or for the insertion of a rod for the simultaneous opening of the lever of adjoining terminal blocks.



The terminal blocks are provided with a lever suited to house an **F5** type ø 5 x 20 mm **fuse** for terminal block type SFO.4 and ø 6.3 x 32 mm fuse for terminal block type FPL.10. The non-polarised printed **microcuircuits** are inserted in an appropriate housing in the lever. The blow-out status of the fuse ignites the LED. Various versions for different voltages are available.

Disconnect

with UL94V-0 polyamide insulating body

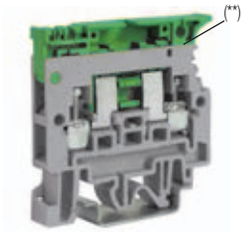
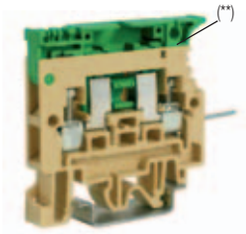
- disconnect by means of a brass cylinder to be inserted in the lever
- disconnect with special connections
- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., "G32" and "TH/35" types
- available in grey RAL 7042 and beige RAL 1001 colours





(**) Both terminal blocks are equipped with a hole suited for the sealing of the lever or for the insertion of a rod for the simultaneous opening of the lever of adjoining terminal blocks

1 screw and 1 4 x 0.8 mm solder connection

Ø 5 x 20 mm CO/5 conducting element
- in tin plated brass to be inserted in the lever

Terminal blocks for test and measurement circuits

with UL94V-0 polyamide insulating body

• universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., “G32” and “TH/35” types

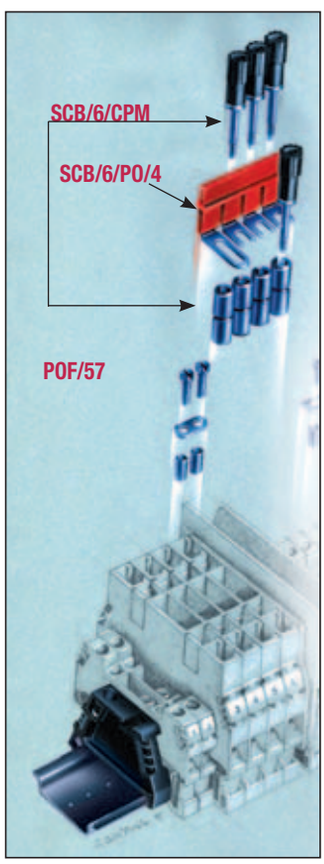
In SCB.6 type terminal block, the use of special cross-connections, formed by

SCB/6/PO/2 (between 2 adjoining terminal blocks) 

or **SCB/6/PO/4** (between 4 adjoining terminal blocks) 

and by the relevant **SCB/6/CPM** shunting screws 

allow the simultaneous earth connection of the current transformers connected to the terminal blocks themselves, guaranteeing the correct operational sequence. In fact such cross connections, in opened position, avoid the translation on the slide links, already connected in an accident prevention position from the outside; they do not require the insertion of further partitions to separate them from other adjoining cross-connections or terminal blocks, due to the special shape of the insulating body of the terminal block itself.

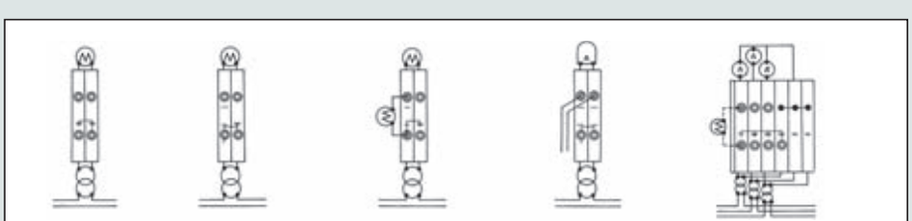


SCB.6 type terminal blocks have also the possibility to house, upstream and downstream the disconnection, sockets for test plugs, suitable for the withdraw of signals.

In particular the shunts can take place:

- on **SCB/CPM** shunting screws of the short-circuit plates
- on **PSD/P** socket to be screwed directly into the conducting body of the terminal block, in order to perform the shunting function.

The slide-link is formed by two guides, held together by a screw inserted in a glass-shape collar, which allows the elastic blocking and the anti-loosening of the slide-link and is provided with a red protective colouring for the easy positioning of the screwdriver during the disconnection and the easy spotting of the slide-link itself.

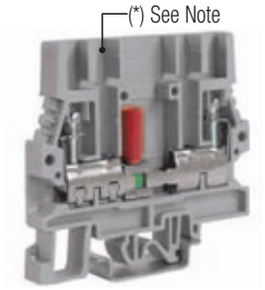


Normal operation | **CT short-circuit** | **Test on measuring instrument** | **Protection instrument test** | **Three phase CT test**

Terminal blocks for test and measurement circuits

with UL94V-0 polyamide insulating body

- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., "G32" and "TH/35" types
- available in grey RAL 7042 and beige RAL 1001 colours



(*) For the simple cross-connection between adjoining terminal blocks the multiple common bar shall be used together with cross-connection screw and sleeves. The interposing barrier located in the insulating body of the terminal block shall be removed with the aid of a cutter

Disconnect test terminal block that allows longitudinal and transversal disconnection. Configuration provided with **test plug socket** downstream and upstream the slide link, conforming to ENEL LV27/3 specification

Disconnect test terminal block that allows longitudinal and transversal disconnection. Configuration provided with **test plug socket** upstream and **a short circuit sleeve downstream the slide link** (for short circuit plates type SCB/6/PO/2 or SCB/6/PO/4, supplied separately), conforming to ENEL LV27/2 specification

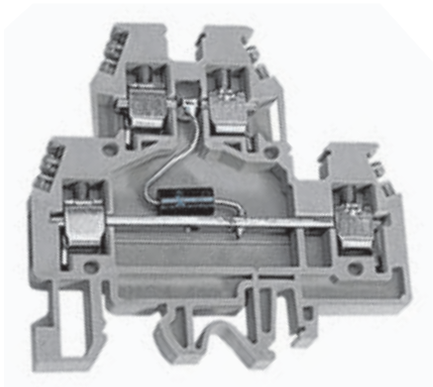
With electronic components

with UL94V-0 polyamide insulating body



- with cross-connection possibility
- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std.
- 2-level terminal block with bi-directional suppresser diode
- protection against overvoltage, transistor, pulse jamming
- class D protection according to standard DIN VDE 0675. 1989
- overvoltage category <1.5 KV, I (acc. to DIN VDE 0110.1)
- available in grey RAL 7042 and beige RAL 1001 colours

DAS 4/D...type terminal blocks, with suppresser diodes inserted as in **diagram 3**, restrict voltage peaks due to surges, electrostatic discharges and inductive load switching and enable the equipment to pass the tests on immunity to the electromagnetic interference defined by the EN 61000-4-2 (electrostatic discharge), EN 61000-4-4 (fast transient/burst) and EN 61000-4-5 (surge test) standards.
The suppresser diodes have a response time (< 1 ns) which is much lower than that of the varistors (approximately 25 ns) and a lower and more accurate response voltage, although compared to varistors they withstand lower discharge currents.
The high precision of the trip voltage and the high speed make them suitable for protecting I/O signal inputs of industrial PLC's, DCS's and PCs against discharge current and voltage interference below 500 A pulse 8/20 ms. This type of interference is usually caused by the normal operation of the actual systems due to switching of high inductive loads, dispersed currents, faults etc.
The range of models available provides a choice between rated voltages suitable for protecting signals with standard voltages of 5 V dc, 12 V dc, 24 V dc and 60 V dc.
The **DAS 4/D...**, connected as shown in **diagram 4**, provides effective protection against differential mode interference for inputs and outputs of industrial PLCs, DCSs and PCs, signal conditioners and sensors, and also for stabilised continuous voltage power supply units of electronic equipment in general.
The **DAS 4/D...**, does not have a signal wiring direction to observe and the positive and negative polarity connection can be carried out at both the upper and lower level.

Differential mode interference (diagram 5): generates a strong difference in potential between the two positive and negative signal conductors of the pair or power supply unit and, being applied directly to the input/output circuits of the equipment, always causes a fault in the same.

Differential mode interference (diagram 6): generates a strong difference in potential between the two conductors of a signal or power supply unit and the reference earth. It is less destructive than differential mode interference.

Caution: the installation of devices for protection against power surges with varistors, diodes and other components between signal and/or power supply conductors and the protection earth reduces the isolation voltage to approximately the value V of breakdown of the discharger used. To carry out isolation tests on the equipment disconnect the dischargers (standard CEI EN60950).

Note for wiring: wiring of the power surge protection devices greatly influences their actual efficacy and we recommend following the instructions below:
– the protection device must be placed as close as possible to the equipment to be protected;
– the connection wires must be as short and straight as possible, interwoven with each other and with the largest possible cross section;
– the earth conductors between common mode dischargers and the equipotential busbar must be as short as possible and with the largest possible cross section and their path must not be parallel to other conductors. The earth of the protected equipment must be connected to the same earth of its discharger and from there to the general protection earthing.

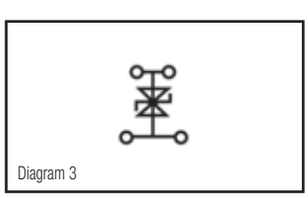

Diagram 3

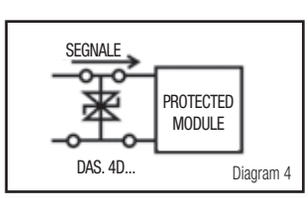

Diagram 4

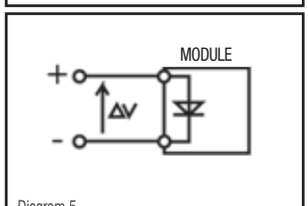

Diagram 5

Differential mode interference.
The potential difference is applied between positive and negative poles of the power supply signal.

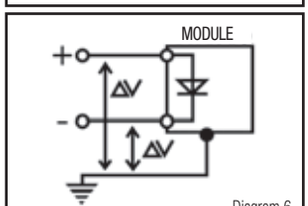

Diagram 6

Common mode interference.
The potential difference is applied between the poles of the signal/power supply unit and the earth.

With electronic components

with UL94V-0 polyamide insulating body

- for overlapped circuits with varistor
- cross-connection possibility on lower level
- protection against overvoltage, transistor, pulse jamming
- class D protection according to DIN VDE 0675
- overvoltage category <2.5 KV, II (acc. to DIN VDE 0110.1)
- available in grey RAL 7042 and beige RAL 1001 colours

DAS.4V... type terminal blocks with, varistor inserted as in **diagram 1**, restrict voltage peaks due to surges, indirect atmospheric discharges and inductive load switching and enable the equipment to pass the tests on immunity to the electromagnetic interference defined by the standards EN 61000-4-2 (electrostatic discharge), EN 61000-4-4 (fast transient/burst) and EN 61000-4-5 (surge test).

The varistors have a response time (20-25 ns) which is longer than that of the suppresser diodes (< 1 ns) and a higher response voltage, although they withstand much higher discharge currents. The high discharge current makes them suitable for uses with strong transients, with currents up to 4500 A pulse 8/20 ms.

The range of models available provides a choice between rated voltages suitable for protecting both signals and power supply units with standard voltages of 24 V dc and 48 V dc or for power supply voltages of 120 V ac and 230 V ac.

The **DAS.4V...**, connected as shown in diagram 2, provides effective protection against differential mode interference for inputs and outputs of industrial PLC's, DCS's and PC's, signal conditioners and sensors, and also for power supply units of electronic equipment in general.

The **DAS.4V...** does not have a signal wiring direction to observe and the positive and negative polarity connection is carried out at both the upper and lower level.

TECHNICAL CHARACTERISTICS	
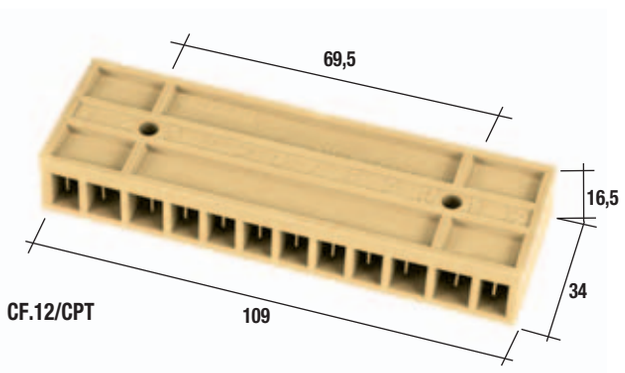
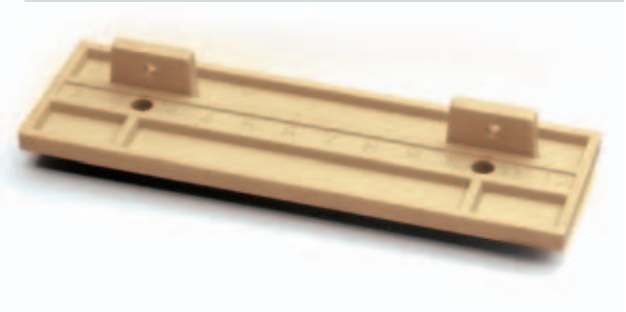
rated cross-section	2,5 mm²
rated current (conf. to IEC 60947-7-1)	20 A
rated voltage (conf. to IEC 60947-7-1)	500 V
rated impulse withstand voltage / pollution degree	6 KV / 3

ACCESSORIES	
Upper end section	of beige polyamide **CF/PT**
Upper end section	of blue polyamide **CF/PT (Ex)i**
Upper special end section	of polyamide **CF/PTM**
Insulating bushing	of beige polyamide **CF/BI**
M4 threaded tension rods	of zinc-plated steel **CF/TR**
Nut (bolt)	of polyamide **CF/DD**



CF/PTM (Cat. No. CF301)
Special end section to be mounted in grooving



CF.12/1+1 terminal boards can be mounted independently or overlapped. In both cases the single terminal board or the one placed on top of the assembly shall be closed using a CF/PT end section (4 mm thickness). The fixing to the panel can take place by means of:

- screws of adequate length **(distance between the holes 69.5 mm)**
- M4 **threaded tension rods**

To ensure maximum insulation from earth and a correct mounting of the overlapped terminal boards it is necessary to insert special **CF/BI bushings** in the relevant holes on the insulating bodies. No bushings are required between the terminal board and the end section as this element is already appropriately shaped.

The above mentioned end section has an engraved numbering from 1 to 12 for an easy identification of the poles.
Push-on male connections, completely protected from the exterior and adequately insulated one from another with diaphragms, are made of copper-zinc alloy with high percentage of copper, and are provided with anti-oxidation nickel plating, or on request, silver coating (**CF.12/1+1/AG** Cat. No. CFA10).

CF.12/FW/CPT (Cat. No. CFW90)

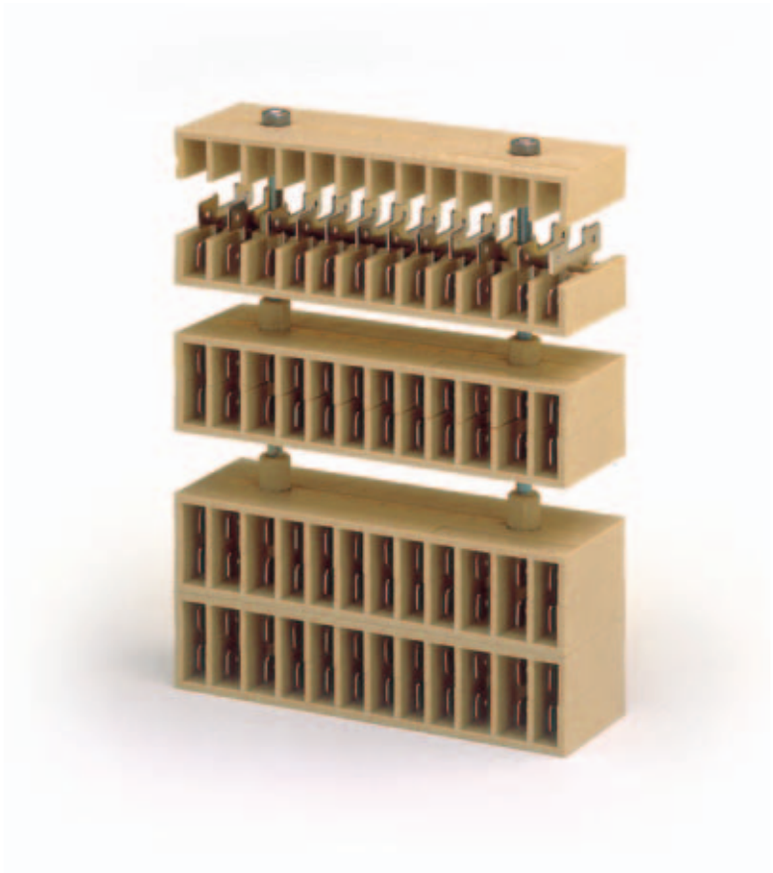
con connessioni (2 x polo) a spina piatta da 6,3 x 0,8 mm

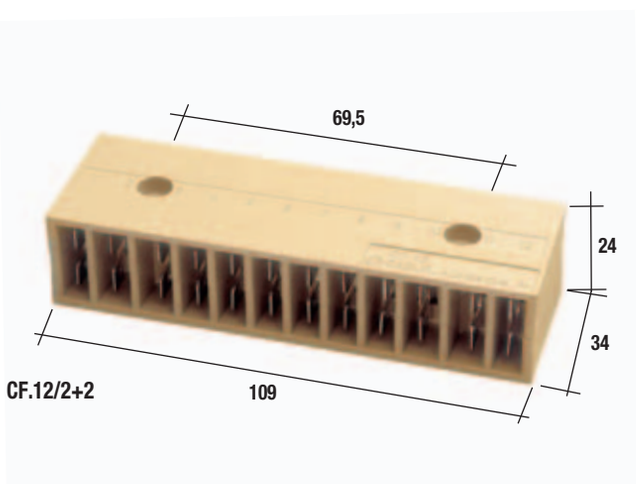
• with beige or blue UL94V-0 polyamide insulating body



CF.12/2+2	Cat. No.	CF200

TECHNICAL CHARACTERISTICS	
rated cross-section	2,5 mm²
rated current (conf. to IEC 60947-7-1)	20 A
rated voltage (conf. to IEC 60947-7-1)	500 V
rated impulse withstand voltage / pollution degree	6 KV / 3

ACCESSORIES	
Insulating bushing	of polyamide **CF/BI**
Reduced insulating bushing	of polyamide **CF/BI**
M4 threaded tension rods	of zinc-plated steel **CF/TR**
Nut (bolt)	of polyamide **CF/DD**



CF.12/2+2 terminal boards can be mounted independently or overlapped. The fixing to the panel can take place by means of:

- screws of adequate length **(distance between the holes 69.5 mm)**
- M4 **threaded tension rods**

To ensure maximum insulation from earth and a correct mounting of the overlapped terminal boards it is necessary to insert special **CF/BI bushings** in the relevant holes on the insulating bodies. To allow a better tightening of the small **CF/DD nuts**, when using threaded tension rods, it is necessary to introduce in the holes of the upper terminal board the reduced **CF.BI bushings**. **CF.12/2+2** terminal boards have engraved numbering from 1 to 12 for an easy identification of the poles.
Push-on male connections, completely protected from the exterior and adequately insulated one from another with diaphragms, are made of copper-zinc alloy with high percentage of copper, and are provided with anti-oxidation nickel, or on request, silver coating (CF.12/2+2/AG Cat. No. CFA20).

Note: a version provided with eight 6.3 x 0.8 mm flat push-on tab connectors is available. **CF.08/2+2** Cat. No. **CF400**

With special connections

Terminal block suitable for the connection of any type of conductor for thermocouple circuits. In fact, due to the excellent electrical contact which results, **thermocouple circuits of any type can be wired up without the intervention of any other compensation material.**

Such a solution allows, in addition to the running of one single item, the reduction of points of contact in the complete circuit.

In order to make the connection completely efficient and permanent the range of diameters of the connectable thermocouples must be within the 0.8 and 1.3 mm range.

The thermocouple circuits, even those with different diameters, stripped of their insulating protection for a length of 20 mm. are overlapped in the inside of the terminal block in such a way as to allow the direct flow of thermoelectrical e.m.f. without the intermediary of a metal body, as happens in normal circuits.

With the double clamping, assured by two screws and by the interposition of the pressure plate, the possibility of e.m.f. caused by lack of homogeneity of the contacts is reduced to more or less nothing.

With special connections

with UL94V-0 polyamide insulating body

- for 5.08 mm pitch female connectors
- double possibility of PTC – easy bridge multi-pole connection
- universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 Std., “G32” and “TH/35” types
- available in grey RAL 7042 and beige RAL 1001 colours

Female connectors, 90° - 5,08 mm pitch and with a number of poles from 2 to 16, are available. The connector can be easily inserted until it reaches its blocking position, guaranteeing optimum connection onto the male contact. In such a position the connector it is hooked onto the insulating body of the terminal block by means of a tooth, of which it is equipped.

VPC/PTF

flange for the securing of female connectors provided with locking screws onto the terminal board

DF/VPC

reduced pitch end section for the separation of different groups

For the fixing of the conductor in an even more secure way, it is possible to use connectors provided with locking screws, located on the sides of the connector itself. In this case it is necessary to insert on to both sides of the assembled VPC.2 terminal blocks a **VPC/PTF** (Cat. No. VP103) flange. In the case that an assembly composed in such a way has a flange with external connecting pins, it is necessary to add a **VPC/PT** (Cat. No. VP101) end section, or to remove the external pins with a cutter. For safety reasons, the connectors must not be handled under load. The use of **DF/VPC** (Cat. No. DU015) barrier, for the physical separation of the different groups of terminal blocks, does not avoid the possibility to perform cross-connections.

The terminal block is available also in the version equipped with signal circuit (VPC.2/L024). In this case a common bar (dimension 7 x 1 x 250 mm), for the common return of a LED (red colour - 24 V), must be inserted in the appropriate housing on the side of the group of adjoining terminal blocks and connected by means of a feeding terminal block - VPC.2(Ex)i/D (Cat. No. VPC200). The **VPC.2(Ex)i/D** feeding terminal block is a version of terminal block type VPC.2(Ex)i, equipped with a type 1N4007 diode.

A transparent cover in order to prevent accidental contacts on the pins is supplied as an accessory (**VPC/VT** - Cat. No. VP102) in 10-pole bars; it can be easily separated into the desired number of poles. The cover is inserted by clip fixing in the appropriate housing provided in the insulating body of the terminal block; the insertion point acts as a fulcrum for the rotation of the protection itself from the closed position (guaranteed by a clip) to the open position (for the insertion of the connector). It is manufactured in transparent material in order to ensure visibility of both the type of connection (in closed position) and the LED, in opened position, once the connector is inserted.

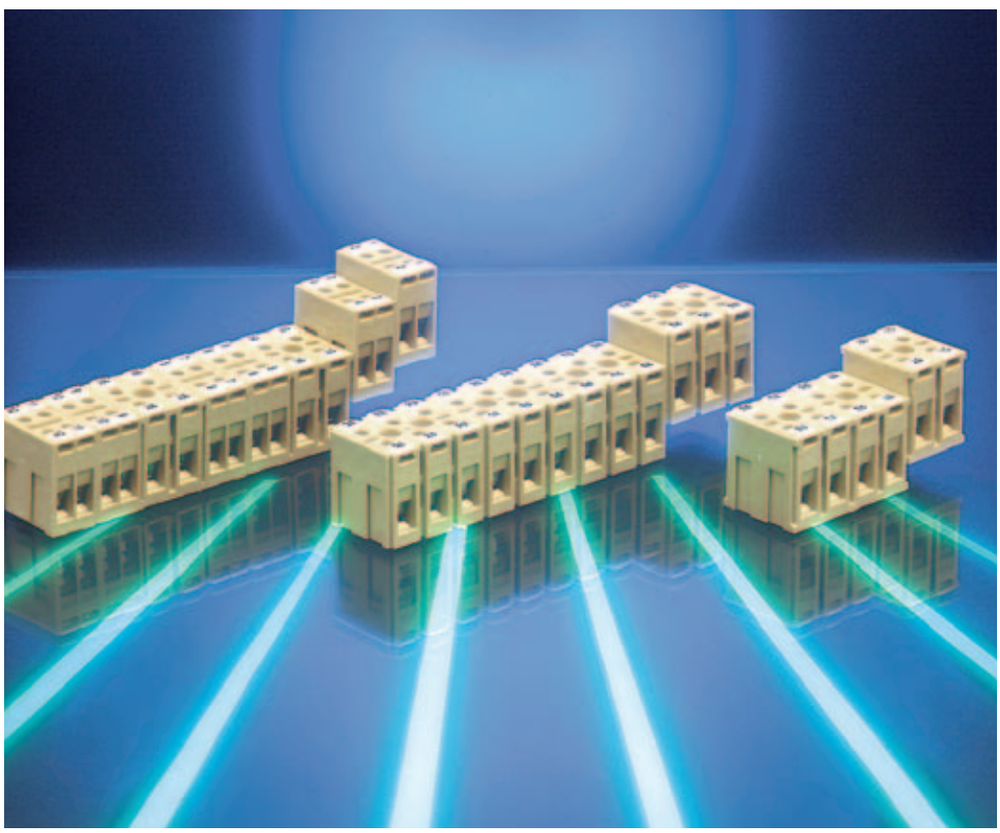
Modular multi-pole terminal blocks



The two way **BPL.4, BPL/R** and three way **TPL.4** terminal blocks can be mounted separately or used to compose terminal boards with unlimited number of poles and no mounting rails are required.

The special “dovetail” coupling system guarantees the maximum compactness of the assembly and only two screws, to be inserted at the ends of the terminal board, are required for the fixing onto the panel.

BPL.4, BPL/R and TPL.4 terminal blocks are suited for the marking using type NU0550 tags.

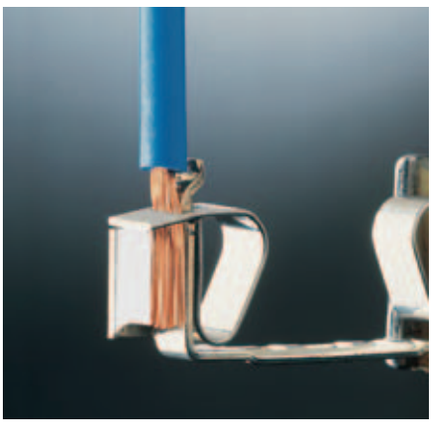
Spring clamp terminal blocks

• available in grey RAL 7042 colour only



For high harness volumes, CABUR offers its own range of spring-clamp terminal blocks suitable for cables from 0.2 to 10 mm^2 and reduced current intensity values.
In order to protect the clamping system, a special stop is provided in the insulating body; this has the function of ensuring the spring does not go over its elastic range, in case of handling carried out by unskilled workforce.
The appropriate sizing of the wire insertion hole, fully in compliance with the requirements given by IEC 60947-1 Standard concerning the gauge, guarantees the insertion of any type of conductor having the rated cross-section, also with a ferrule. The resulting connection, with respect to the technology adopted, is of the maximum reliability and safety under both the aspects of the quality of the materials and for the particular conformation of the components; in this way the damaging of unprepared flexible conductors is avoided.
The insertion of the wire is vertical; this means further time and costs savings, especially where space is limited, but where guaranteed high-density connections are required.
For the commoning of different elements, a practical and safe cross-connection system is available.
The terminals with rated cross sections between 1.5 mm and 4 mm^2 can be connected one with another in the most various ways thanks to our exclusive “Easy Bridge” (**PTC**) connection system, with quick coupling, which combines efficiency, rapidity and flexibility and ensures at the same time an extraordinary economic result; these characteristics, **together with an IPXXB intrinsic installation, without the need of further insulation protections** (for cables, terminals and cross-connections), guarantee a connectivity which is superior to that offered by competitors.

CNU/8

SHZ

Marking systems

Our particular marking system has to be highlighted. The same **SHZ** numbering strip, in fact, can be inserted on both sides of the terminal block or on the appropriate housings provided in the upper part of the terminal block. This means easy identification of every terminal block in the electrical panel.
It is possible also to perform the marking also using **CNU/8** tags.

- mounting onto PR/3 type rails according to IEC 60715 Std., "TH/35" type
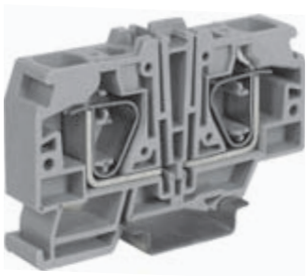
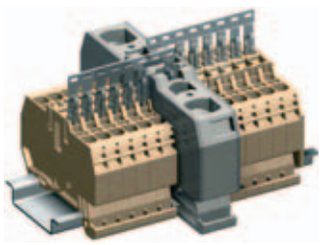
- available in grey RAL 7042 colour
- can be connected with HMM.2/GR, HMM.2/1+2/GR, HMM.2/2+2/GR, HMS.2/GR, HMFA.2/GR, HMM.4/GR, HMM.4/1+2/GR, HMM.4/2+2/GR, HMM.6/GR

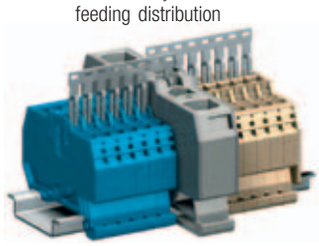
(*) value referred to the terminal and not to the potential distributor

*The **/GR** tag indicates the grey colour version.*

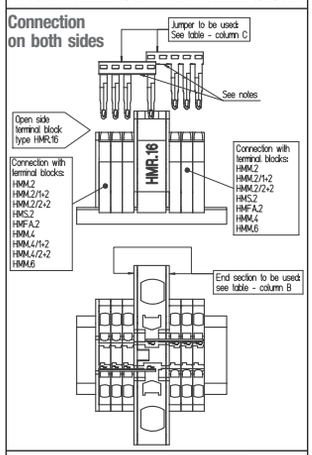


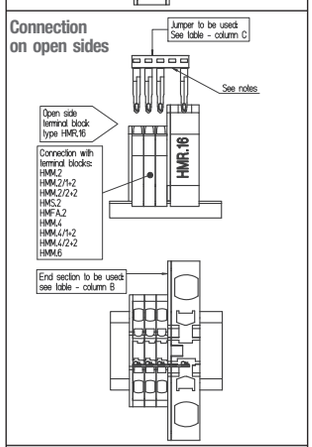


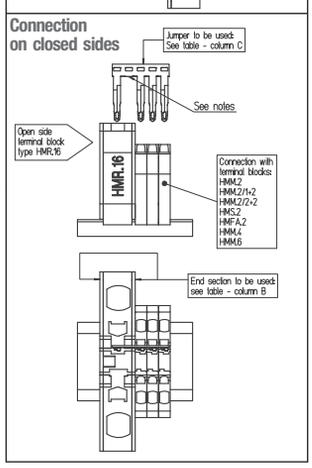
Terminal assembly with double feeding distribution



Connection scheme - distribution terminal blocks HMR.16/GR and HMR.16/D/GR







single power supply version	HMR.16/GR Cat. No. HM350GR
double supply version	**HMR.16/D/GR Cat. No. HM360GR**

TECHNICAL CHARACTERISTICS

function / type		potential distributor
rated cross-section	(mm²)	16
connecting capacity		
flexible	(mm²)	1,5 ÷ 25
rigid	(mm²)	1,5 ÷ 25
max. flexible with ferrule (mm²)-ferrule type		16 - WP160/22
rated voltage / rated current / gauge	conf. to IEC 60947-7-1	800 V / 76 A (*) / A7
rated voltage / rated current / AWG	UL	-
rated impulse withstand voltage / pollution degree		12 KV / 3
insulation stripping length	(mm)	18
height / width / thickness	TH/35 7,5 mm	50 / 80 / 12,8
height / width / thickness	TH/35 15 mm	57 / 80 / 12,8
height / width / thickness	G32	-

When the cartridge is mounted on HMFA 2 terminals, adjoining one another, a terminal strip must be envisaged between one terminal and the next, because of the pitch differential between terminal and cartridge.

Note:

(a) with fuse ø 5 x 20 mm, 250 V, Imax = 6,3 A – with brass pin Imax = 10 A
(b) total value, when the cartridge is mounted on terminals, including the mounting rail

H Series

with polyamide insulating body

- for blade fuse (acc. to DIN 72581/3F – ISO 8820) and Ø 5 x 20 mm fuses (fuses supplied separately)
- with possibility of cross connection
- mounting onto PR/3 type rails – according to IEC 60715 Std., "TH/35" type
- available in standard (grey RAL 7042 colour) or (Ex) i "intrinsic safety" circuits (blue RAL 5015 colour) versions, where indicated

for Ø 5 x 20 mm fuse

for Ø 5 x 20 mm fuse

(*) value referred to the insulation characteristics of the terminal block
(**) separate configuration conf. to IEC 60947-7-3

Possibility of the insertion of a LSH type indicator (for 12, 24, 48, 115 or 230 V), supplied also separately, equipped with a red coloured LED. The blow-out of the fuse determines the ignition of the LED, with a current flow of approximately 2 mA in a.c. or 5 mA in d.c.

detail of PTC jumper with DFM/500 barriers, SNZ/508 numbering strips and VPC/VT lug protection covers

detail with 5.08 mm female connectors inserted on the two levels and the lug protection covers raised

Female connectors, 90° - 5.08 mm pitch and with a number of poles from 2 to 16, are available. The connector can be easily inserted until it reaches its blocking position, guaranteeing optimum connection onto the male contact. In such a position the connector is hooked onto the insulating body of the terminal block by means of a tooth, of which it is equipped.

In electrical panels where the space is particularly limited but there is nevertheless the requirement of high cable connection density, Cabur offers, also in spring-clamp technology, a series of mini terminal blocks suited for the connection of conductors up to 4 mm2.
The range consists of three versions, for panel mount (by means of screw or clip) and for the IEC 60715, 15 mm PR/2 rail mount.
The particular configuration of the insulating body of the three types of terminal blocks allows the perfect matching between anyone of them, even of different versions, in order to guarantee maximum flexibility.

SUGGESTED COMPOSITION: for the mounting of terminal boards formed by terminal blocks type **HPP.2/GR** it is highly recommended to use together **HP.2/GR** and **HPP.2/GR** in a 4 to 1 ratio. Whenever there is the need to dismount the terminal board assembled in such a way, it is recommended to separate each group composed by a **HPP.2/GR** and dismount them one at a time, with the aid of an appropriate screwdriver (CCH/2.5-4) and acting in the appropriate slots of the insulating wall of the terminal blocks

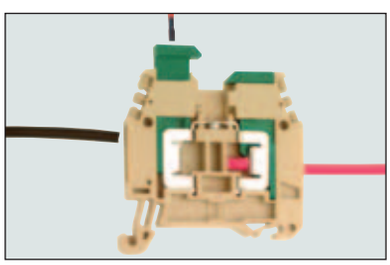
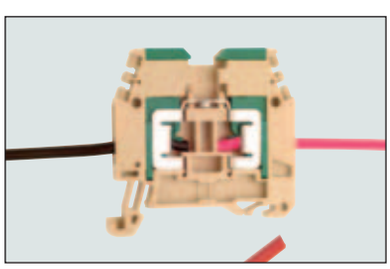
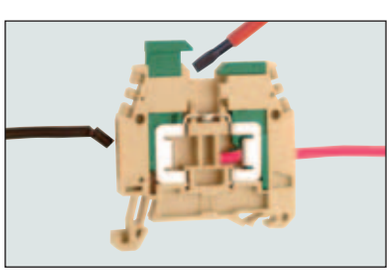
The range consists of three versions, for panel mount (by means of screw or clip) and for the IEC 60715, 15 mm PR/2 rail mount.
The particular configuration of the insulating body of the three types of terminal blocks allows the perfect matching between anyone of them, even of different versions, in order to guarantee maximum flexibility.

Insulation displacement terminal blocks

NCS terminal block is an excellent solution for the quick and safe connection of conductors having small cross-section. This system in fact minimises connection time as neither preparing the conductor nor tightening the screws is necessary. All that needs to be done is to trim the conductor and, unlike what happens in other types of connection that require an appropriate insulation stripping, introduce the end of the wire in the upper part of the conductor insertion hole. At this point the simple action, performed by the operator's fingers or with the aid of a screwdriver, of applying pressure on the tapper, guides the conductor through a fork in the conducting body, with a resulting cut in the insulation and thus creating electrical contact.
In operational position, the conductor is placed in the lower part of its introduction hole.
What needs to be pointed out is that the described connection can either be performed without any tool or simply with the aid of a normal screwdriver, always at hand for any operator.
The metallic part, which covers both the functions of conducting body and wire connections, is made in a special copper alloy; it ensures the best resistance to every aggressive agent and, thanks to its own elasticity, a high number of operations (more than 50), always guaranteeing reliable electrical contacts. The particular shape and angle of the fork, suited for the displacement of the insulation and to the contact, further avoids the conductor from accidentally slipping out of place. It is equally simple to remove the conductor from the terminal block: once again, with the use of a screwdriver (please refer to the image) it is
possible to lift the tapper which, in its lower part, is shaped in a way as to pull the conductor out of the contact area with the fork, freeing it for the extraction. Once extracted, if the conductor must be re-connected, it must be trimmed and the above described procedure must be repeated once again.







Note:
alongside the NCS terminal block, the NCV version is also available: this version offers on one side the I.D.C. (Insulation Displacement Connection), and on the other the traditional screw-clamp connection. Such solution can become particularly useful in case of "field" needs of larger conductors (up to a maximum of 6 mm^2) or where is nevertheless requested to guarantee to the end user the use of screw-clamp connection.

EDM terminal blocks represent the basic series in melamine produced by Cabur, having feed-through function. The whole series consists of eight types, with the following rated cross-sections in mm^2.

2,5 4 6 10 16 25 35 70

connection type: screw, on both sides, indirect and anti-loosening in response to pressure-plate action. The tightening screws are only accessible using a special screwdriver, and the special shape of the screw-heads make them impossible to lose. The screw tightening system offers the best guarantee of mechanical retention and efficiency under current, and is suitable for the connection of conductors of all cross-sections, with or without special preparation. The actions of tightening and loosening are extremely simple and can be carried out with tools such as screwdrivers, which are always at hand; it is important in any case to use screwdrivers of suitable dimensions and characteristics, in order to avoid damaging the screws or the insulating body.

conducting body: tube type, entirely in copper-zinc alloy with nickel-plating; the characteristics of the material used and the production method are such as to avoid the phenomenon of “seasoning cracking”.

tightening reliability: suitable orthogonal grooves on the bottom of the conducting body and on the lower surface of the pressure plates ensure perfect electrical contact with the conductors and an efficient mechanical clamp. The grip is made particularly efficient by the elastic function accomplished by the pressure plate, which, in actual fact, under the pressing action of the screw, tends to bend, thus exerting an applied reaction to the head of the screw itself, which resists loosening, even in cases of dynamic stress.

ease of insertion: the insertion of the conductor in the terminal block is eased by:
- sloping entrance planes
- the rounded edges of the pressure plate
- the ample size of the entrance hole relative to the diameter of the maximum allowed conductor.

other functions: as well as their main function as feed-through terminal blocks, EDM terminal blocks are designed and manufactured in such a way as to carry out other functions. Indeed, through a threaded hole in the upper part of the conducting body, it is possible to:

- create a cross connection, either permanent or switchable, between two adjoining terminal blocks (the partition in the insulating body can be easily removed)
- create a multiple commoning bar connection between different terminal blocks
- insert a test plug socket

marking: all EDM terminal blocks offer the possibility of marking, on either side, using different Cabur systems (see accessories section, numbers CNU/8, SNZ and CSC).

mounting: the melamine terminal blocks in the EDM series are designed to be mounted on PR/DIN mounting rails, which conform to IEC 60715, “G32” type.

EDM Series

Terna LV 27

Enel Distribuzione DV 27

SV series is formed by four feed-through terminal blocks in the following rated cross-sections, measured in mm^2:

2,5 4 6 10

type of connection: by means of screws, on both sides, indirect and anti-loosening, thanks to the action of the loading springs. The tightening screws are accessible only with an adequate screwdriver and the particular shape of the screws makes it impossible to lose them. The tightening process by screws ensures the best mechanical retention and efficiency of the flow of the current. It is suitable for connection, with or without special preparation, of conductors of all cross-sections. The tighening and loosening operations are extremely simple and they can be performed with tools, such as screwdrivers which are always at hand. It is however important to use an appropriatly sized screwdriver in order to avoid damaging either the screw itself or the insulating body.

conducting body and clamping system: it is constituted by wire clamping collars, with captive screws and conducting busbar, entirely made of a nickel plated zinc/copper alloy and with loading springs in passivated zinc plated steel.

tightening reliability: special orthogonal grooves on the inner surfaces of the wire clamping collars and on the surface of the conducting busbar, ensure a perfect electrical contact with the conductors and an efficient mechanical clamp. In presence of vibrations, even of high intensity, the two springs which are placed between the clamping collars and the insulating body, have the “shock absorbing” function. As a consequence, the two systems constituted by, respectively the conductors inwards an outwards from the terminal blocks, connected one to another by the busbar on one side, and by the insulating body of the terminal block fixed onto the rail, on the other side, are in this way completely independent. In addition the antiloosening connection of the conductor is guaranteed by the elasticity of the wire clamping collar, once the screw is under the tightening force of the conductor.

ease of insertion: insertion of the conductor into the terminal block is made easy by:
- sloping entrance planes on the insulating body
- the small tab on the wire clamping collar, which also avoids the insertion out from the collar itself
- a countersink on the lead-in of the collars
- an appropriately sized entrance hole, with reference to the diameter of the maximum permitted conductor. The depth into which the conductor can be inserted is limited by a partition in the insulating body.

other functions: besides their main functions as feed-through, SV terminal blocks are designed in such a way as to carry out other functions. These are:
- to create a cross connection (either permanent or switchable), between two adjoining terminal blocks (by simply eliminating the diaphragm existing in the insulating body)
- create a multiple commoning bar connection between several adjoining terminal blocks
- insert a socket for a test plug

marking: all SV terminal blocks can be marked on both sides by using CNU/8, SNZ or CSC marking tags (the latter system allows the composition of alphanumeric signs up to a maximum of 6 characters (but an ADR adapter is required).

mounting: melamine terminal blocks of SV series are designed to be mounted on PR/DIN mounting rails, according to IEC 60715 Std., “G32” type.

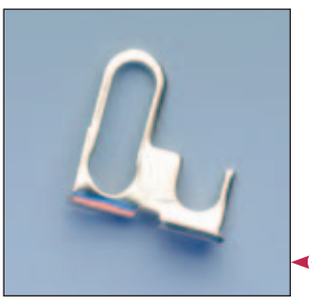
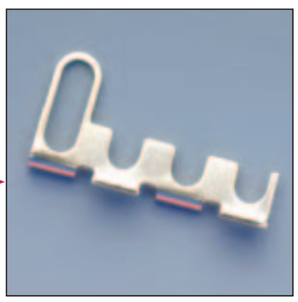
Terminal blocks for test and measurement circuits

All melamine terminals and the related accessories are available while stocks last. Contact the Sales Office to verify the product availability.



SCX/PO/2 Cat. No. SC103



SCX/PO/4 Cat. No. SC104

SCX/CPM Cat. No. SC105

All Cabur feed-through terminal blocks are suited to be employed in test and measurement circuits. Nevertheless, in order to realise in the optimum way the connections of the secondary circuits of measuring current transformers, the use of **SCX** series terminals is recommended; this in fact guarantees:

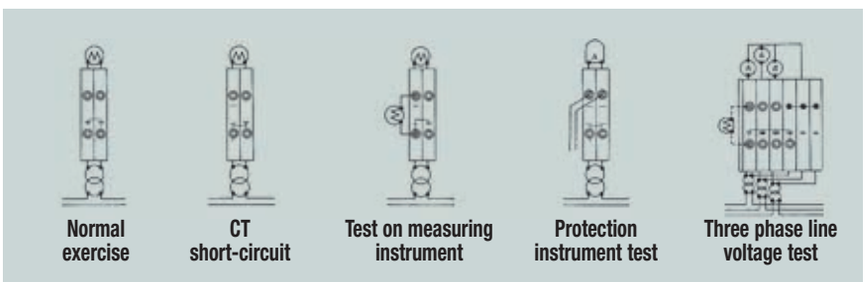
- high reliability and safety of both switchable and permanent electrical connections
- immediate identification of the function of the components and of the condition of the circuits
- the performing of separate blocks of disconnect and short circuit
- adequate dimensioning, in order to withstand the whole load of the connected conductors.

The use of **SCX/PO/2** (for two adjoining terminal blocks) and **SCX/PO/4** (for four adjoining terminal blocks) special cross connections and of **SCX/CPM**, screws and sleeves, enable to link to earth simultaneously the current transformers connected to the terminal blocks themselves, assuring the correct operational sequence. In fact such cross connections, in "open" position, prevent the manoeuvring of the slide links, avoiding the disconnection of the current carrying circuits.

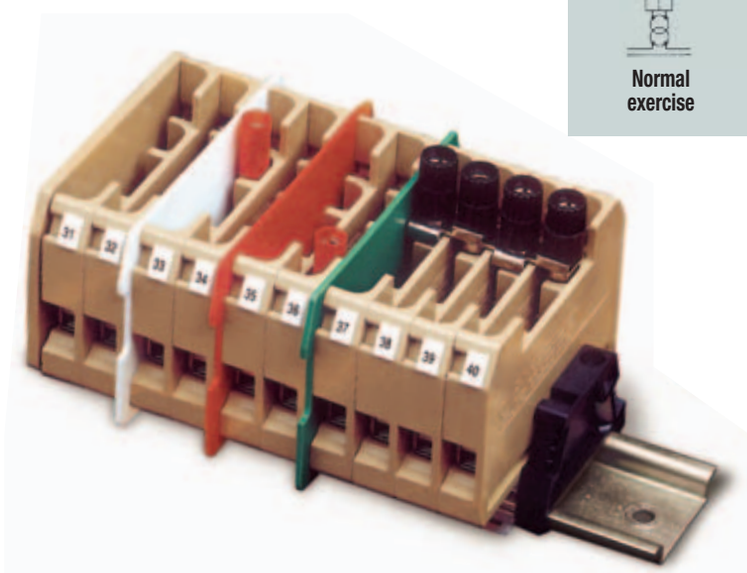
Switchable cross connections, already located outwards in an accident prevention position, must be adequately distanced from both adjoining cross connections and terminal blocks, by enclosing, within end barriers, the disconnect group. It is possible to perform shunts from the SCX.10 terminal block by means of silver plated brass SDD/2 test plugs, which can be inserted:

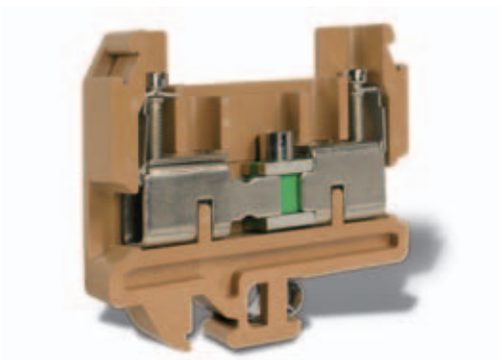
- in the SCX/CPM sleeves of the switchable cross connection
- in the PSD/L sockets, which can be screwed directly on to the conducting body, in order to perform solely the shunting function

The slide link is constituted by two wipers, locked by a screw inserted in a collar which enables the elastic anti-loosening clamping to the slide link and the easy positioning of the screw driver, during disconnect operations SCX.10 type disconnect terminal blocks enable the composition of various test or control circuits, some of which are shown below.



Connection schemes

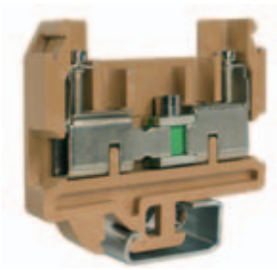


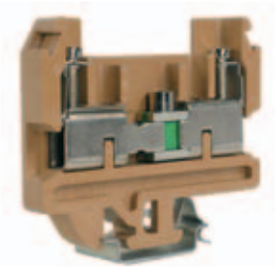


Disconnect

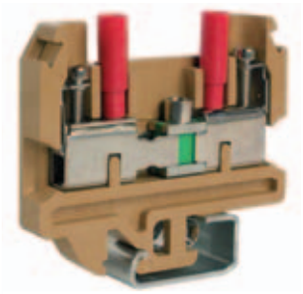
with melamine insulating body

- UL94V-0 (5V)
- mounting onto PR/DIN or PR/3 type rails - according to IEC 60715 Std., “G32” and TH/35 types





NOTE:
version to be mounted onto rails according to IEC 60715 Std. - type TH35



SCX.10/DD
Slide link disconnect test terminal block that allows longitudinal disconnection. Configuration provided with a test plug socket downstream and upstream the slide link, according to the ENEL LV27/3 specifications

SCX.10/O-DD Cod. **SC210**
version to be mounted onto rails according to IEC 60715 Std., “TH/35” type

Available while stocks last.
Contact the Sales Office to verify the product availability

Fuse-holders

with melamine insulating body

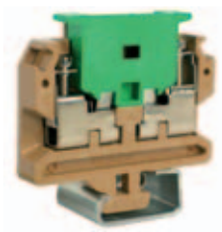
- UL94V-0 (5V)
- mounting onto PR/DIN type rails - according to IEC 60715 Std., "G32" type

Available while stocks last.
Contact the Sales Office to verify the product availability

The terminal block is equipped with a lever suited to house:
a) SFC/CO, conducting element in order to perform the simple disconnect operation, with shunting possibility.
b) Ø 6.3 x 32 mm - 500 V - 25 A max. fuse

NOTE:
the Ø 6.3 x 32 mm fuse is not of our normal supply.

The terminal block is equipped with a lever suited to house a Ø 6.3 x 32 mm - 500 V - 25 A max. fuse and a LED signal circuit. The interruption of the fuse determines the ignition of the LED.



With cartridges suited to house a **F5** - Ø 5 x 20 mm type **fuse** or **CO/5** type - Ø 5 x 20 mm **connecting element** in order to perform the simple disconnection.

CF5
Cat. No. **FL404**

NOTE:
F5/... type fuse and CO/5 type conducting element are supplied separately.

(*) values referred to the insulating characteristics of the terminal block

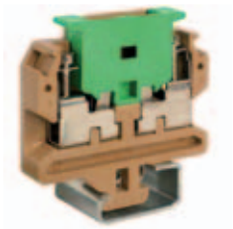
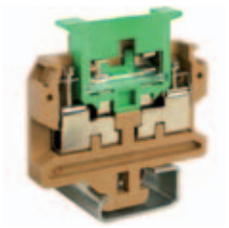
Component holders

with melamine insulating body

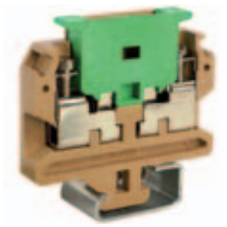
- UL94V-0 (5V)
- mounting onto PR/DIN type rails - according to IEC 60715 Std., "G32" type



With Ø 6 x 25 mm or Ø 6,3 x 23 mm **fuse**-holder cartridge - suited to hold our **LSN** Ø 6 x 26 mm **lamp** for voltages exceeding 70 V.



Fuse-holder terminal block for our Ø 5 x 20 mm **F5** type fuse and **LSN** (Ø 6 x 26 mm) **lamp** for voltages exceeding 70 V. The fuse blow-out determines the ignition of the lamp.



Terminal block type **FLD.10/D** allows the insertion of a 1 A diode (i.e. types 1N 4001 ÷ 4007 or BY 127) or 3 A diode (i.e. types BY 251 ÷ 255 or 1N 5401 ÷ 5407).

NOTE:
- Ø 6 x 25 mm or Ø 6,3 x 23 mm are not of normal supply
- F5 fuse and LSN lamp are supplied separately

Available while stocks last.
Contact the Sales Office to verify the product availability

(TC/DIN) - Special version of feed-through EDM.2, terminal block suitable for the connection of any type of conductor for thermocouple circuits. In fact, due to the excellent electrical contact which results, thermocouple circuits of any type can be tightened up without the intervention of any other compensation material.
Such a solution allows, in addition to the running of one single item, the reduction of points of contact in the complete circuit.
In order to make the connection completely efficient and permanent the range of diameters of the connectable thermocouples must be within the 0.8 and 1.3 mm range.
The thermocouple circuits, even those having different diameters, stripped of their insulating protection for a length of 20 mm, are overlapped in the inside of the terminal block in such a way as to allow the direct flow of thermoelectrical e.m.f. without the intermediary of a metal body, as it happens in normal circuits.
With the double clamping, assured by two screws and by the interposition of the pressure plate, the possibility of e.m.f. caused by lack of homogeneity of the contacts is reduced to more or less nothing.

CDA Series high current terminal blocks

with melamine insulating body

- UL94V-0 (5V)
- mounting onto PR/DIN type rails - according to IEC 60715 Std., "G32" type

All melamine terminals and the related accessories are available while stocks last.
Contact the Sales Office to verify the product availability.

Within the range of melamine insulated feed-through terminal blocks, **CDA** series terminals represent the so-called "power terminal blocks", with relatively large rated cross sections and consequently high current carrying capacity. The series is formed by homotetic terminal blocks, in the following rated cross-sections in mm^2, referred to flexible conductors:

70 120 185

For each of the three sizes, three different versions are available, depending on the **type of connection:**

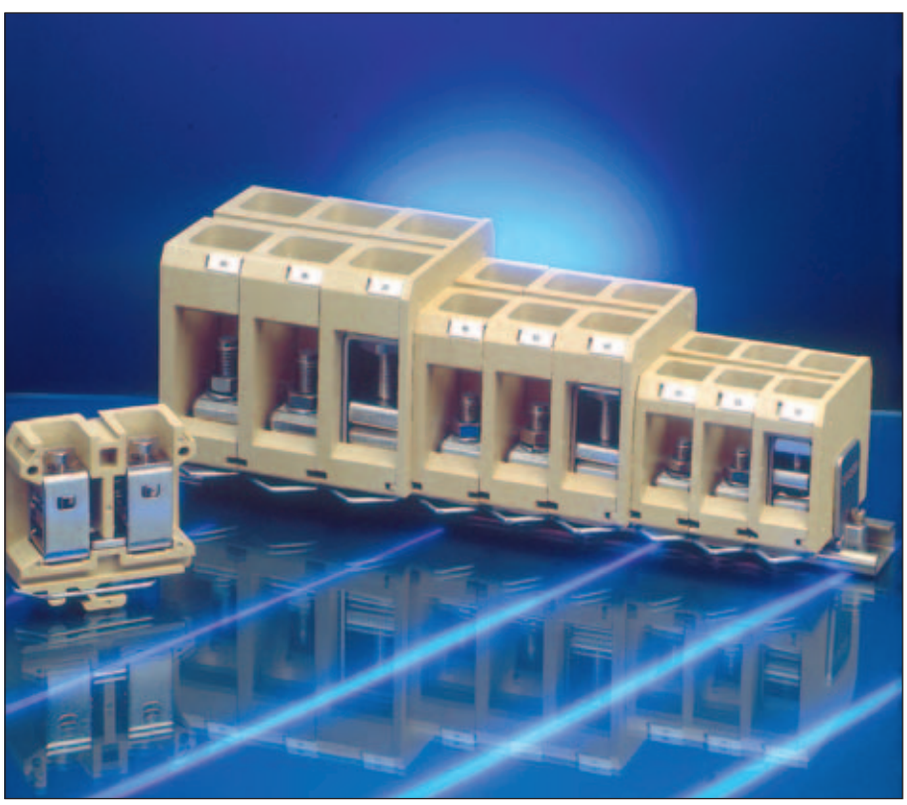
- bar/bar (/BB):
which allows the connection, on both sides, of conductors provided with lugs or two bars

- bar/cable (/BC):
which allows the connection of two cables, of which one is provided with a lug and the other is without special preparation

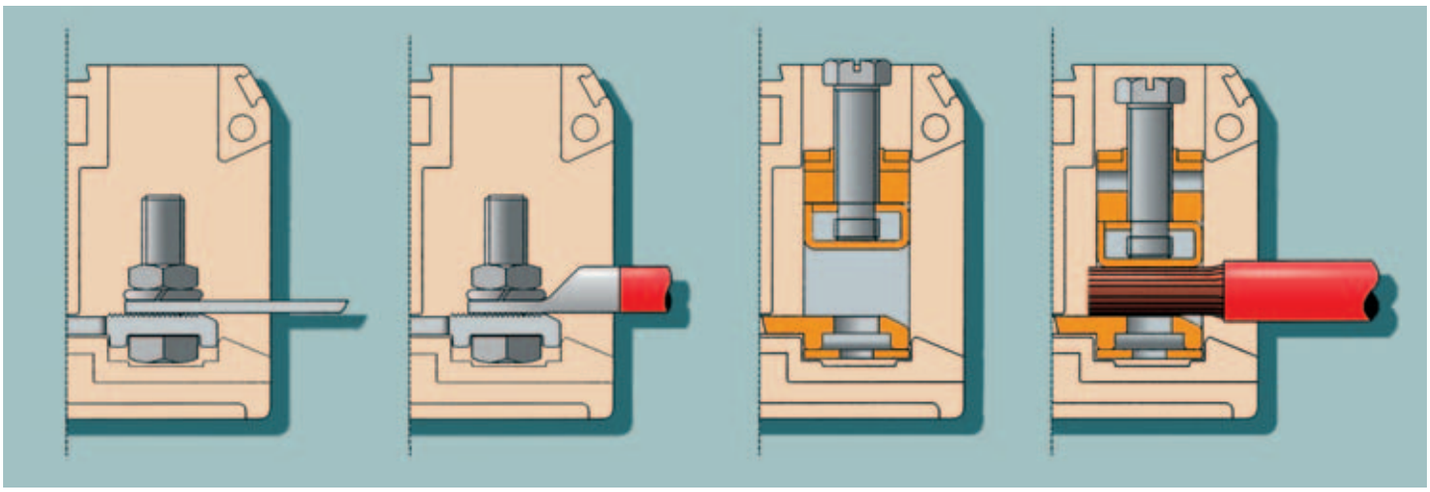
- cable/cable (/CC):
which allows, on both sides, the connection of conductors without special preparation.

CDA series terminal blocks have the possibility to be modified according to the specific needs; in fact from the bar/bar version it is possible to obtain the bar/cable or the cable/cable version, by simply removing the screw, the washer and the nut from either one or both the sides of the conducting busbar and inserting one or two CDA/CO wire clamping collars, which can be supplied apart as normal accessories.

tightening reliability:
the clamping of the cable lug or the bar onto the conducting busbar is secured by means of a screw and a nut and with the interposition of a grower washer.
In the collar clamping versions, the reliability is guaranteed by the particular shape of the pressure block, manufactured in such a way as to exploit the reaction to the pressure force on the conductors as a lock for the screw, even in presence of vibrations and other dynamic stress.
Furthermore, both the conducting busbar and the pressure lock are provided with transversal grooving which ensure a perfect electrical contact an efficient mechanical retention.



NOTE:
in the wire clamping collar versions, the tightening screw is provided with both the slot for the screwdriver (of adequate dimension) for the preliminary tightening of the conductor, and with hexagon head for the definitive tightening, up to the requested values of tightening torque.



easy cable insertion:
in the wire clamping collar versions, the insertion of the conductor is eased by:

- sloping entrance planes on the insulating body
- the rounded shape of the pressure block
- chamfering on the conducting busbar
- adequate dimensioning of the conductor insertion hole.

To this regard, CDA terminal blocks offer a capacity greatly exceeding the indicated rated reference values, in fact the maximum conductors which can be effectively connected are:

- flexible:

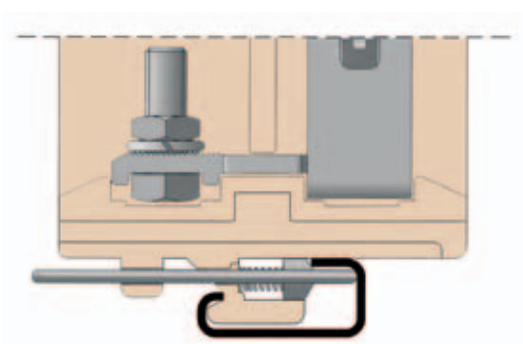
70 150 240 mm²

- rigid:

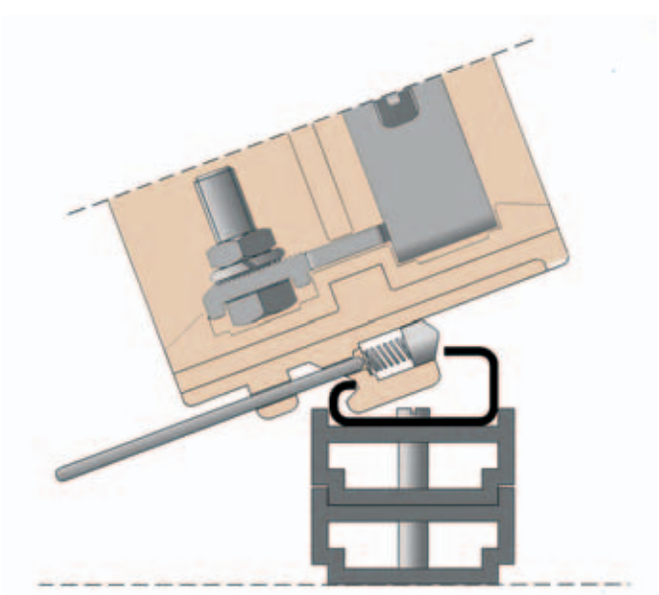
95 185 240 mm²

marking:
CDA series terminal blocks are suited to be marked with CNU/8 or CSC (the latter system requires an ADR adapter).
The slots on the upper front side of each terminal block allow the insertion of further indication related to the entire terminal board.

mounting:
as these terminal blocks are suitable for the connection of very heavy and poorly ductile conductors, a fork-type locking pin has been inserted in the foot of the insulating body in order to grant major stability on the mounting rail. During mounting it is necessary to the consider proper spacing for the fully unlocked pin.



In case the mounting rail is placed on a flat surface, CDA terminal block dimensions require the use of a supporting bracket (ACI121213 type), in order to distance adequately the terminal board from the panel itself. For CDA.70, only one bracket is required, whilst two are requested for CDA.120 and CDA.185.



CDA Series high current terminal blocks

with melamine insulating body

- UL94V-0 (5V)
- mounting onto PR/DIN type rails - according to IEC 60715 Std., “G32” type

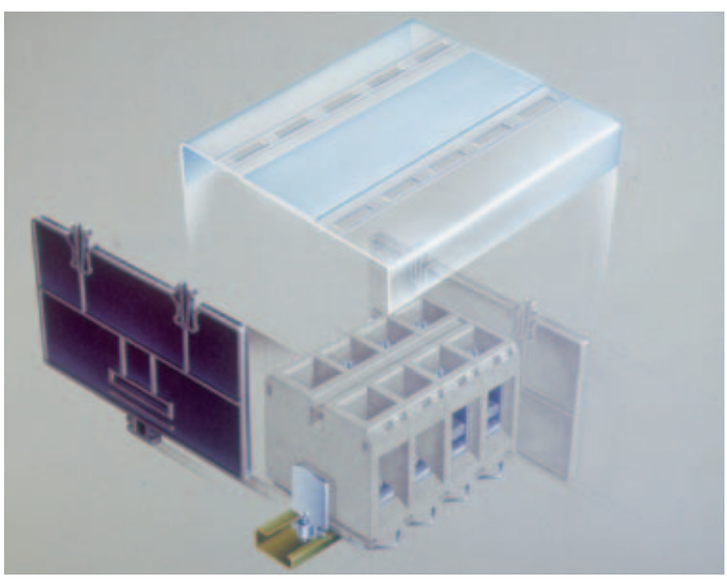
All melamine terminals and the related accessories are available while stocks last.
Contact the Sales Office to verify the product availability.

protection:
CDA terminal blocks can be further protected against direct and/or accidental contact by means of proper PRT type covers (of different sizes: medium or big) of self-extinguishing transparent material. These covers are supplied in standard length of 200 mm (corresponding to the total width of 4 adjoining blocks) and must be inserted on SPS supports, also of self-extinguishing material. PRT covers allow the protection of one side of the terminal block; the complete protection of the terminal board is obtained by two covers, which overlap once mounted.

- for terminal blocks type CDA.70 and 120 **PRT/M+SPS/5**

- for terminal blocks type CDA.185 **PRT/M+SPS/7**

PRT/G size must be used when the conductors come from the back of the board or, otherwise, when one or more connection points, not used, must be nevertheless protected.



CDA Series high current terminal blocks

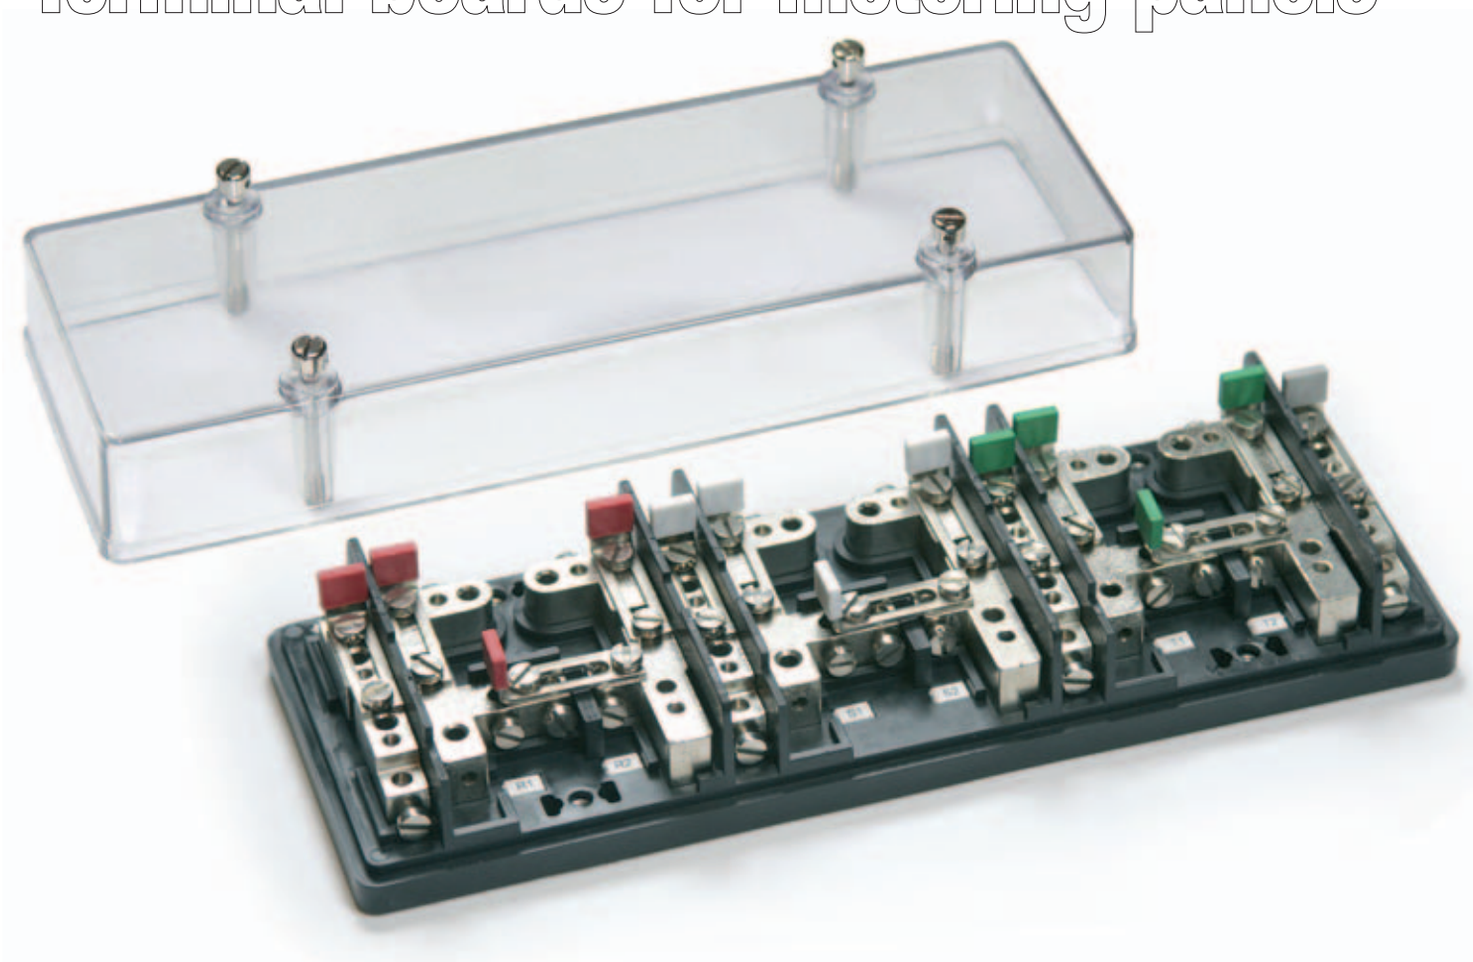
Terminal boards for metering panels



Cabur control terminal boards have been developed in order to enable electric power suppliers and users to easily check measuring instruments, without interrupting the current carrying circuits during the verification itself or during the replacement of the instruments.

Each terminal board is composed by an insulating body, carrying the copper zinc alloy terminals to which the ammeter, voltmeter circuits and the devices for disconnect and short circuit operations are connected. Each terminal board is supplied with a transparent cover (of cellulose acetate), provided with appropriate captive screws for the sealing of the assembly.

In two-phase and three-phase terminal boards, the insulating base is built from Kelon (an abbreviation of Keramic + Nylon): this is a nylon 6 based, self-extinguishing UL94V-0 polymer with the addition of special ceramic spheres and subsequent thermal stability. The inclusion of the microspheres and the thermal procedure make the item extremely hardwearing (rigid, but also able to withstand impacts and wear and tear)

The current phases are marked in different colours, to be defined when ordering.

TECHNICAL CHARACTERISTICS	
rated cross-section	6 mm^2
connecting capacity	
flexible conductors	0,5 ÷ 6 mm^2
rigid conductors	0,5 ÷ 6 mm^2
conductors insertion hole	Ø 4,1 (mm)
tightening torque	1,2 (Nm)
rated current (conf. to IEC 60947-7-1)	57 A
rated voltage (conf. to IEC 60947-7-1)	500 V
rated impulse withstand voltage / pollution degree	6 KV / 3

MCM Series

The use of **MCM** series control terminal boards allows:

1) disconnection, upstream and downstream the measuring instruments
2) the insertion of a test instrument, downstream or upstream the measuring instruments
3) shunting, by means of common plugs, from the four connection terminals
4) voltage transmission from the beginning of the ammeter circuit to the disconnect slide-link by means of a simple cross connections.

In normal service, voltmeter leads are connected to the R-S-T terminals, whilst the ammeter leads, are to be inserted in the terminals identified R1-R2, S1-S2, T1-T2. The instruments are connected to terminals 1 and 2. The vertical slide-link cross connections are closed, the horizontal slide-link cross connections are open.

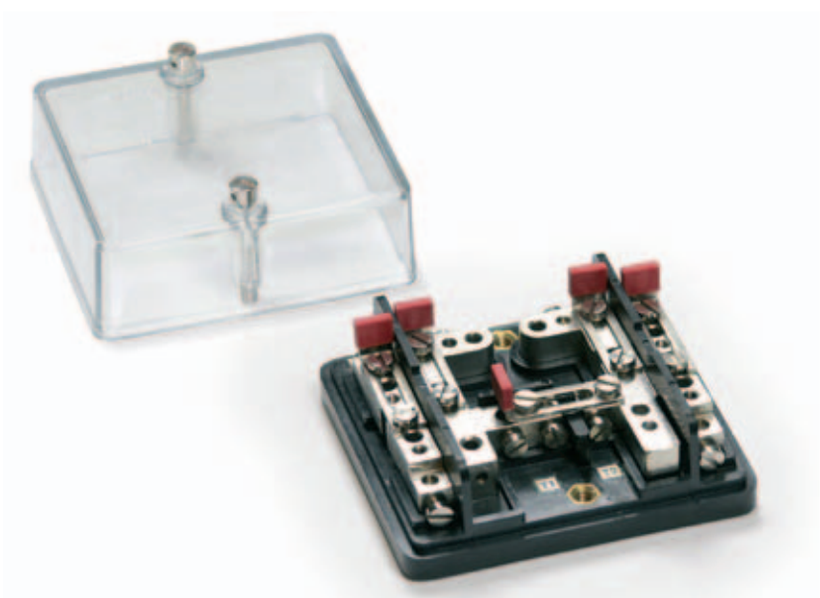
When inserting control instruments, the following instructions are to be followed:

- by means of normal plugs, the voltmeter leads must be shunted from the test instrument on to the voltage sockets of the disconnect slide-link or to the insertion blocks of the fuse-holders;
- the ammeter leads of the test instruments must be inserted in sockets 1 ad R1 or 2 ad R2; same procedure is to be followed for the other phases;
- therefore, the corresponding vertical slide-link must be disconnected.

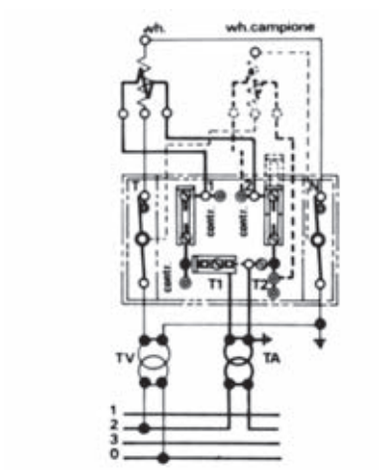
If there is a need to replace a measuring instrument, it is necessary to previously close the horizontal slide-links, disconnect the vertical slide-links and open the slide-link.
Feeding conductors (incoming and outcoming) are inserted from the rear of the terminal board, with conductors passing through slots on the insulating base of the terminal board.

for single-phase connected electric power meters

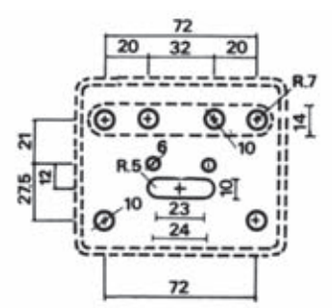
MCM.1



Overall dimension (with cover)
MCM.1: 95 x 85 x 48 mm



Application scheme



Fixing template

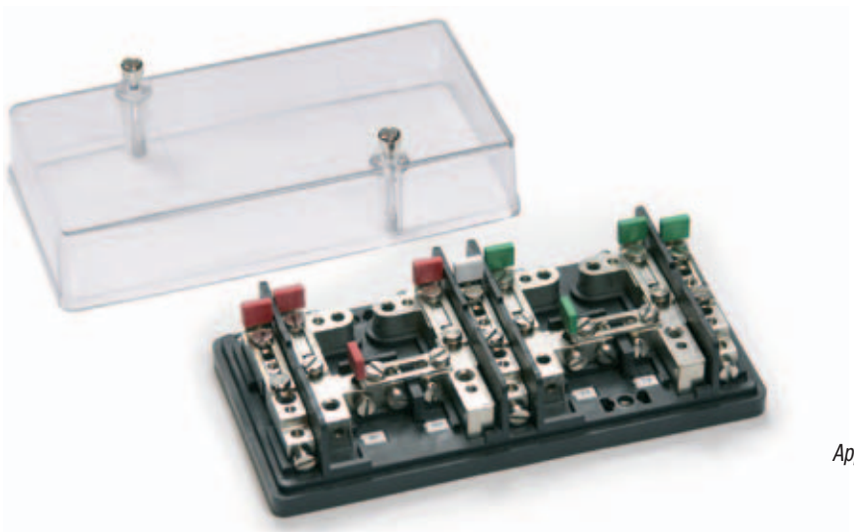
ENEL in order to identify phases, has adopted a particular colour convention, based on the sections where terminal blocks are installed.
From the left, phases are identified as follows:

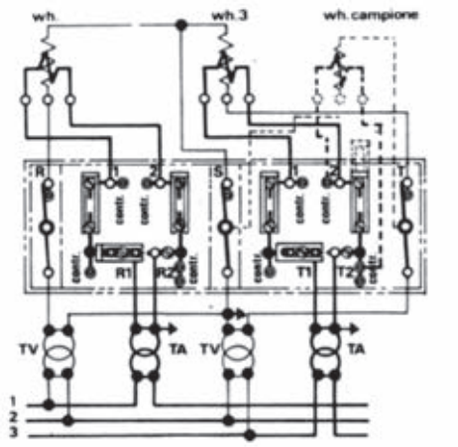
Type	Cat. No.
MCM.1/B (white)	**MC201B** (adopted in Campania and Lombardy)
MCM.1/G (yellow)	**MC201G** (adopted in Veneto and Trentino Alto Adige)
MCM.1/R (red)	**MC201R** (adopted in the rest of Italy)

MCM Series

for ARON connected
electric power meters

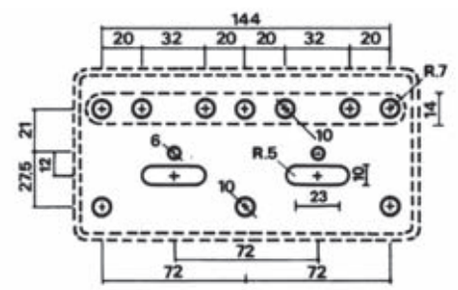
MCM.2





Application scheme

Overall dimension (with cover)
MCM.2: 170 x 85 x 48 mm



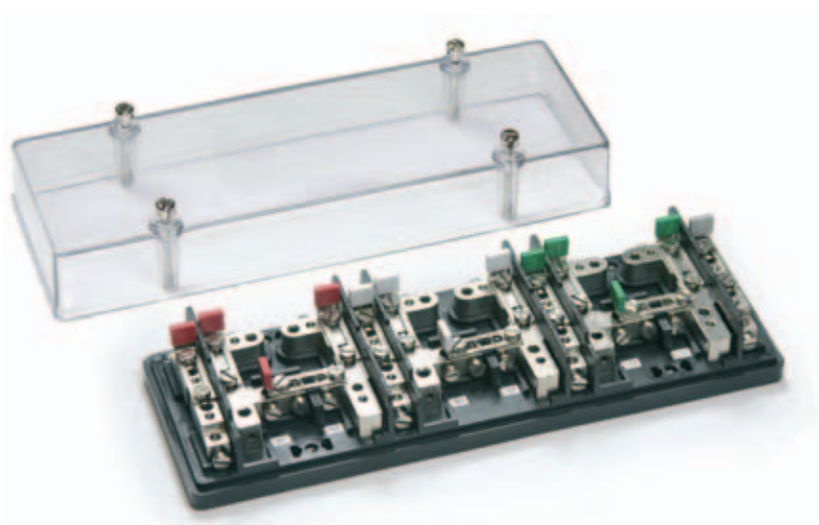
Fixing template

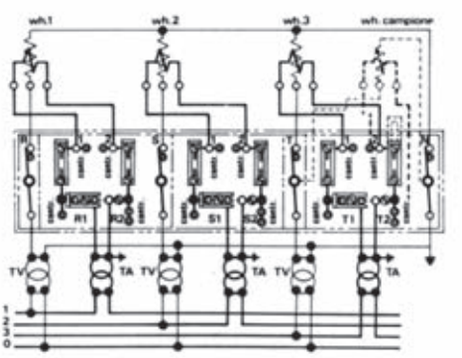
ENELin order to identify phases, has adopted a particular colour convention, based on the sections where terminal blocks are installed.
From the left, phases are identified as follows::

Type	Cat. No.
MCM.2/B (white)	**MC202B** (adopted in Campania and Lombardy)
MCM.2/G (yellow)	**MC202G** (adopted in Veneto and Trentino Alto Adige)
MCM.2/R (red)	**MC202R** (adopted in the rest of Italy)

for three-phase + neutral
connected electric power meters

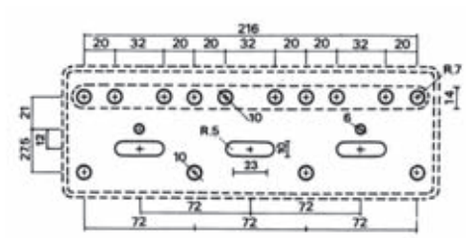
MCM.3





Application scheme

Overall dimension (with cover)
MCM.3: 245 x 85 x 48 mm



Fixing template

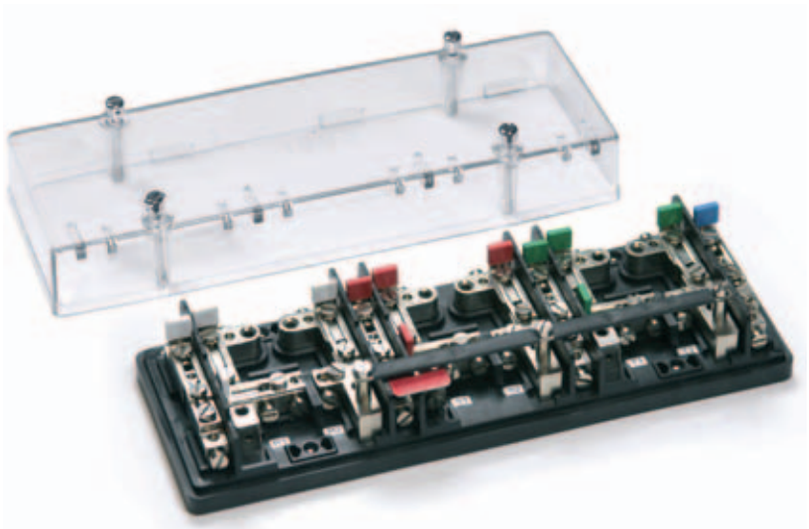
ENELin order to identify phases, has adopted a particular colour convention, based on the sections where terminal blocks are installed.
From the left, phases are identified as follows:

Type	Cat. No.
MCM.3/B (white)	**MC203B** (adopted in Campania and Lombardy)
MCM.3/G (yellow)	**MC203G** (adopted in Veneto and Trentino Alto Adige)
MCM.3/R (red)	**MC203R** (adopted in the rest of Italy)

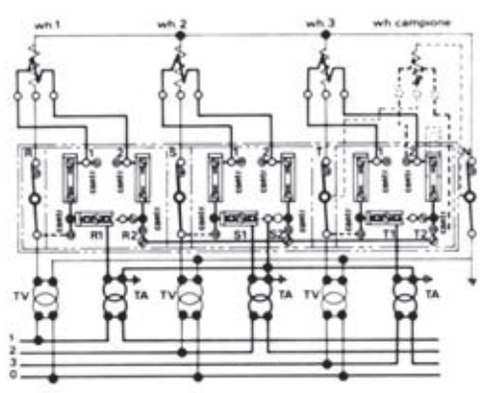
MCM Series

for three-phase + neutral
connected electric power meters

MCM.3/VE



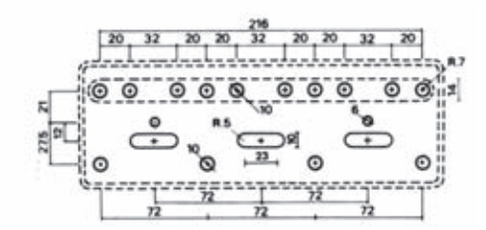
Overall dimension (with cover)
MCM.3/VE: 245 x 85 x 48 mm



Application scheme

ENELin order to identify phases, has adopted a particular colour convention, based on the sections where terminal blocks are installed.
From the left, phases are identified as follows:

Type	Cat. No.
MCM.3/VE/B (white)	**MC233B** (adopted in Campania and Lombardy)
MCM.3/VE/G (yellow)	**MC233G** (adopted in Veneto and Trentino Alto Adige)
MCM.3/VE/R (red)	**MC233R** (adopted in the rest of Italy)



Fixing template

MCT/SA Series

MCT/SA series differs from MCM series in that:

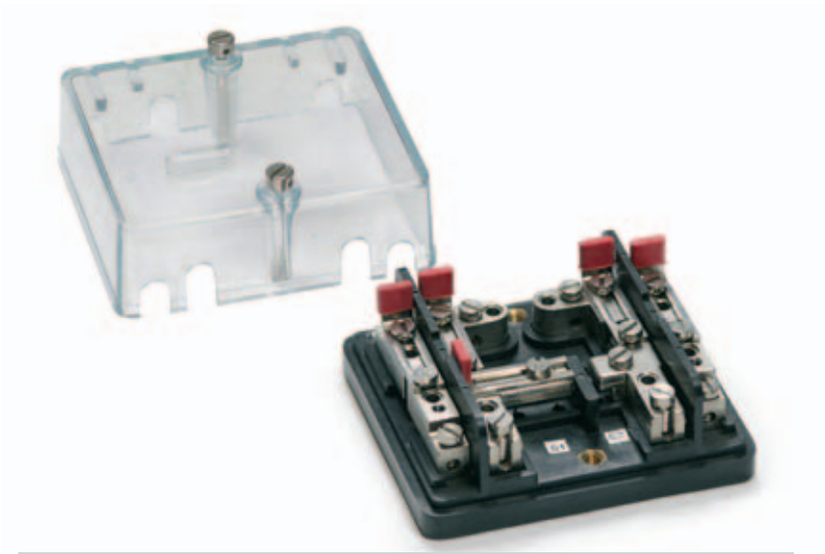
1) feeding conductors (incoming and outcoming) are inserted frontally instead from the rear of the terminal board, withconductors passing through slots on the upper and lower sides of the cover

2) the cover is provided with safety locks that prevent the closing if the slide-links are not in the correct position. The employment specifications of MCT/SA terminal boards are identical to those given for MCM series.

MCT/SA Series

for single-phase connected electric power meters

MCT.1/SA



Overall dimension (with cover)
MCT.1/SA: 95 x 85 x 48 mm

ENELin order to identify phases, has adopted a particular colour convention, based on the sections where terminal blocks are installed.

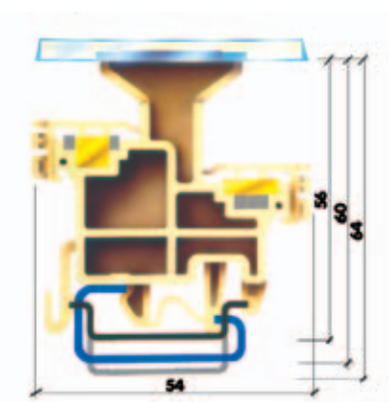
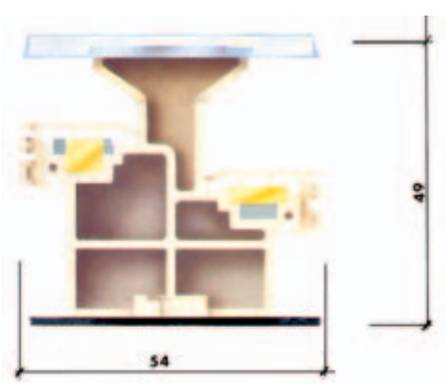
SDN neutral busbar supports



SDN/D

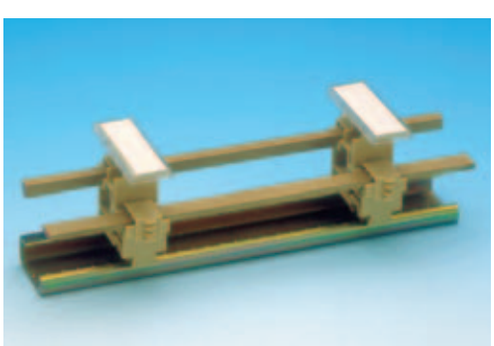


SDN/H

SDN/D (Cat. No. SD200)
to be mounted on rails according to IEC 60715 Std.

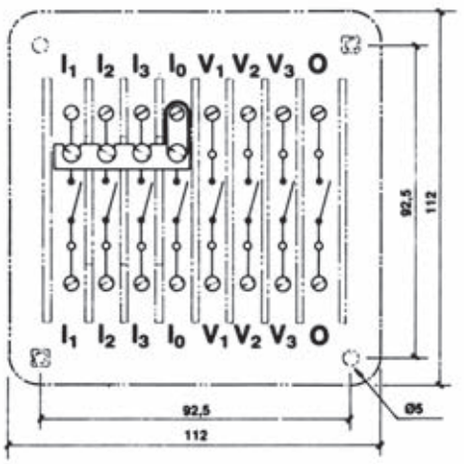
SDN/H (Cat. No. SD300)
to be screwed directly on panel

- **support pitch: 20 mm**
- **both types are suited for 6 x 6 mm or 10 x 3 mm busbars**
- **insulating body:** of beige polyamide (RAL 1001); KC 600 degree tracking resistance, UL94V-0 self-extinguishing degree. Temperature range: between - 30°C and +110°C. Provided with two housing for the marking compositions of letters or numbers (up to 3 figures), by means of CSC tags, and card holders with transparent protection for identification inscription.



MS.8x10 disconnect terminal board

8-poles, 4 ammetric and 4 voltmetric



MS/8x10/N

Cat. No. **MZ300N**

TECHNICAL CHARACTERISTICS

rated cross-section	10 mm²
connecting capacity	
flexible conductors	0,5 ÷ 16 mm²
conductors insertion hole	5 x 10 (mm)
test tightening torque	120 (Ncm)
rated current (conf. to IEC 60947-7-1)	57 A
rated voltage (conf. to IEC 60947-7-1)	500 V
rated impulse withstand voltage / pollution degree	6 KV / 3
thickness (with cover, including screws)	52 / 65 mm

Insulating body: of green polycarbonate, filled with fibreglass.
Conductor body: components of copper-zinc alloy with high percentage of copper and provided with nickel plating.
Cover: of black polyamide.

On request, the terminal board can be supplied according to different electrical schemes.

A version with cover in transparent cellulose acetate is available.

QBLOK series

Applications

Distribution terminal boards are used as supplementary terminal boards for phase or neutral expansion inside electrical panels. They are also called equipotential terminal boards since they are used as equipotential nodes in distribution control units to house the earthing system.

General characteristics

- Configuration, with 7 and 12 holes
- Mounting onto PR/3, type “TH/35 “ rails according to IEC 60715 Std.
- Intrinsically IPXXB protected according to IEC 60529 Std.
- Marking possibility with CNU/8 or CNU/10 tags on each busbar
- Available in green and blue
- Insulating in polyamide 6.6 UL94V-0

POLM series

Applications

Distribution terminal boards are used as supplementary terminal boards for phase or neutral expansion inside electrical panels. They are also called equipotential terminal boards since they are used as equipotential nodes in distribution control units to house the earthing system.

General characteristics

- Protected terminal boards with 7,11, and 15 holes
- Fixing: DIN rail or panel-mount with screws
- Rated voltage 500V according to IEC 60947-7-1 Std.
- Conforming to EU Low voltage Directive 2006/95/EC

Materials

- CW 614N Brass
- Zinc-plated steel screws with combinated single-slot and Phillips heads

CONTC series

Applications

The terminals of the CONTC Series are mainly used inside junction boxes and, from a physical standpoint, can be considered as simple Kirchhoff's nodes.

General characteristics

- Maximum withstand temperature: 130 °C
- Degree of protection: IPXXB according to IEC 60529 Std.
- High dielectric strength
- Resistance to tracking currents
- Screw-clamp

Materials

- These products comply with the essential requirements of the EU 2006/95/EC Low Voltage Directive
- CW 614N Brass
- Zinc-plated screws and dowels
- Transparent polycarbonate

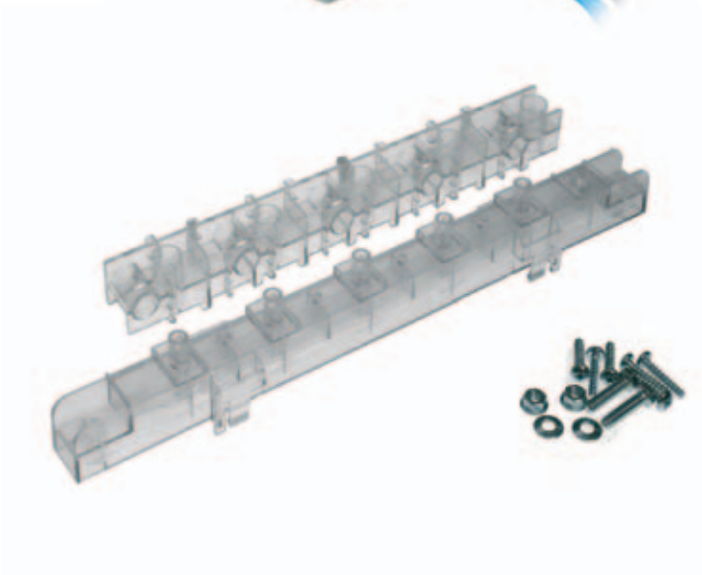
Copper bar supports

Applications

The SUPP/5400 support allows rapid and secure fixing of copper busbars for power distribution. The different dimensions of the busbars perfectly adapt to the SUPP/5400 support, by simply rotating the closing cover which has different sized grooves for the immediate fixing of any of the four different busbars indicated in the table. The last columns of the table indicate the support c-to-c (distance between centers) distances necessary in function of the maximum rated current and the maximum allowable short circuit current.



General characteristics

- Loads from 160A to 400A
- Equipped for insertion of the earthing bar, if necessary, in the 5 x 15 mm² and 5 x 20 mm² cross-sections
- Moulded in self-extinguishing plastic in compliance with UL94
- Can be mounted on rail or on panel

CAT. NO.	TYPE	CORRENT	DIMENSIONS	SHORT CIRCUIT CURRENT	
				5000V	10000V
CSBR5400	SUPP/5400	160A	5,0 x 15,0	500,0 mm	450,0 mm
		250A	5,0 x 20,0	750,0 mm	450,0 mm
		320A	5,0 x 25,0	750,0 mm	450,0 mm
		400A	5,0 x 32,0	750,0 mm	450,0 mm

H Series terminal block and relevant accessories.

PT end sections

For each type and cross section of terminal block, there is a specific insulating and closing end section to be placed on the open element of each terminal board. This end section may also be used to separate different phases of adjoining terminal blocks linked by cross connections or to increase insulation distances where specific circumstances may require it. The end sections have the ***same overall dimension as the related terminal block***, thicknesses are given in the table below.

Terminal block		End section

End brackets

BTU

Cat. No. **BT005**

Universal end bracket, suitable for rails according to either IEC 60715 type “G32” or IEC 60715/TH35 (types PR/DIN and PR/3); can be mounted directly in the desired position and does not require screw fixing.

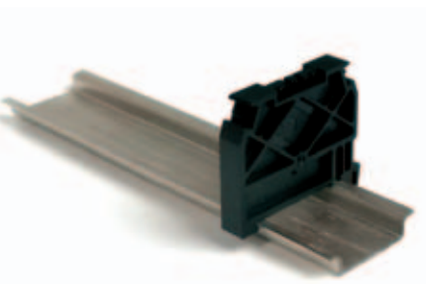
- of black polyamide
- thickness: 8 mm

BTO

Cat. No. **BT007**

End bracket, suitable for rails according to IEC 60715/TH 35 (types PR/3); can be mounted directly in the desired position and does not require screw fixing. Especially suitable for fixing screw, high type.

- of black polyamide
- thickness: 8 mm



BT/3

Cat. No. **BT003**

To be mounted on rails according to IEC 60715/TH35 Std. (type PR/3)

- of black polyamide
- thickness: 8 mm

BT/2

Cat. No. **BT006**

To be mounted on rails according to IEC 60715/TH35 Std. (type PR/2)

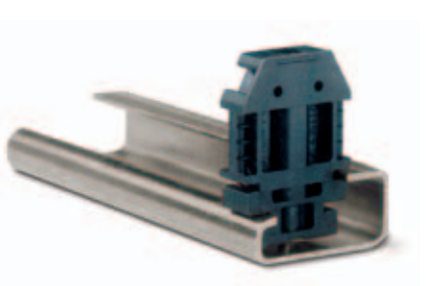
- of black polyamide
- thickness: 8 mm

BT/DIN/PO

Cat. No. **BT001**

To be mounted on rails according to IEC 60715 Std. type “G32” (type PR/DIN)

- of black polyamide
- thickness: 8 mm



CDA/BT

Cat. No. **CD003**

To be mounted on rails according to IEC 60715 Std. type “G32” (type PR/DIN)

- in brass (particularly suitable for rail assemblies formed by terminal blocks of larger dimensions, such as GPM, GPA, CDA and ACB)
- thickness: 11 mm

Mounting rails

- according to IEC 60715/TH35 - 7,5
- according to IEC 60715/TH35 - 15
- supports for TH/35 type rail

Accessories for mounting rails

DESCRIPTION	TYPE / CAT. NO.	IMAGES
6 x 6 mm copper busbar L = 2 m suited for the the mounting of terminals for the grounding of electrical cables	**ACI121123** Cat. No. Z121123	6 x 6 mm copper busbar blocking terminal with 6 MA x 12 mm screw	**ACI121118** Cat. No. Z121118	 5MA x 16
Terminal with saddle for 6 x 6 mm copper busbar cable cross-section from 0.5 to 16 mm²	**ACI121119** Cat. No. Z121119	Terminal with saddle for 6 x 6 mm copper busbar cable cross-section from 4 to 35 mm²	**ACI121121** Cat. No. Z121121	  with saddle
Special hexagon slot 6 MA x 12 mm screw	**ACI121026** Cat. No. Z121026	 6 MA special screw  exagonal slot
Special hexagon slot 5 MA x 10 mm screw	**ACI121421** Cat. No. Z121421	 5 MA special screw  exagonal slot
4 MA nut for rapid mounting onto 32 x 9 x 15 mm steel rails	**ACI121211** Cat. No. Z121211	
5 MA nut for rapid mounting onto 32 x 9 x 15 mm steel rails	**ACI121212** Cat. No. Z121212	6 x 6 mm copper busbar blocking terminal with 6 MA x 25 mm screw	**ACI121221** Cat. No. Z121221	Inclined copper busbar support with 6 MA x 10 mm screw and 6 MA nut	**ACI121307** Cat. No. Z121307	
Pre-assembled cross sections

They are supplied in 2, 3, 5 or 10-pole pre-assembled configuration.

They allow the cross connection between two or more adjacent terminal blocks; their position once mounted is such as to **prevent injuries**.

All the components are made of nickel-plated brass.

Screw-clamp terminal blocks

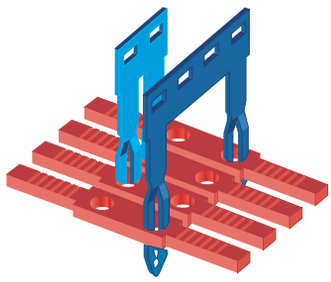
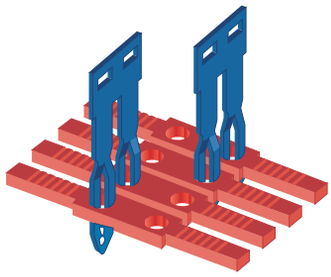
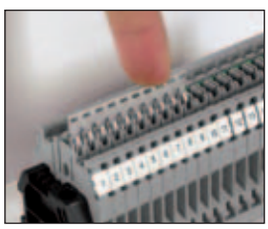
Cross connections

Easy Bridge System

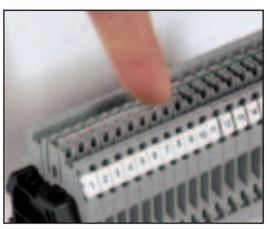
- screwless, snap-in insertion
- transversal and staggered mode connection possibility
- once inserted, **intrinsically IPXXB protected** resulting installation, without the need for further insulating covers
- patented system



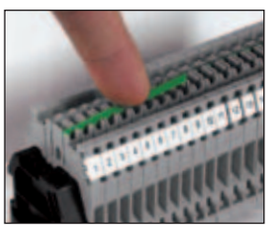




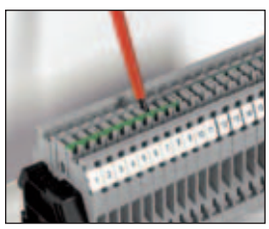
1



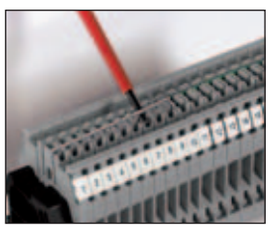
2



3



4



5

1-2 After having cut the bar according to the number of poles, insert the cross-connection, in the appropriate groove of the terminal block. At this point, by using the blade of a screwdriver, push down the cross-connection until it reaches its blocking point. The cross connection will be fully insulated and intrinsically IPXXB protected.

3-4 After having mounted the cross-connection, the connected poles can be outlined and detected by the PTC/SP green strip. This strip is supplied in the 100 mm standard length and it can be easy cut to the appropriate length with the aid of a cutter.

5 To remove the cross-connection, it is sufficient to remove the PTC/SP strip: insert the blade of the screwdriver in the jumper slot, then lift it up and finally extract it.

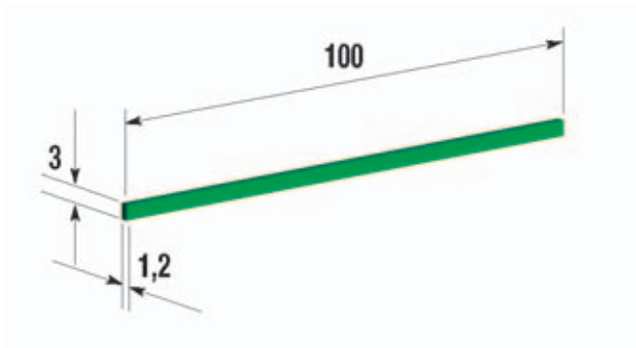
(**) Including versions /1+2, /2+2, and the corresponding earth terminal blocks

Cross connections

Easy Bridge System

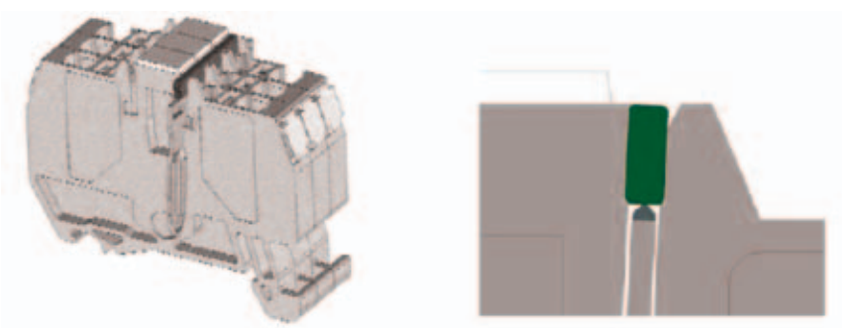


In addition to the traditional system Easy Bridge, the new high visibility bridge “Bridge Plus Easy” is now available.

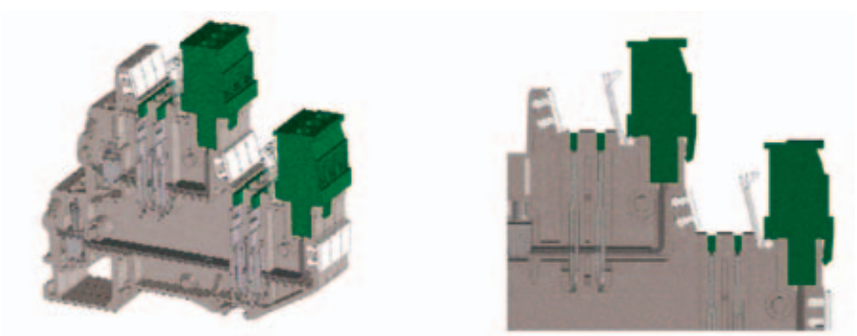
In badly lit panels it is not always immediate and easy to see where jumpers are inserted, except by paying great attention; and this can cause connection errors.
In order to solve this problem that Cabur has developed a marking strip to be used on its terminal blocks, where PTC jumpers are employed, this simplifies their localization, once inserted.

Ony one model (PTC/SP – Cat. No. PTC0990) for all the terminal blocks has been developed, independently of the pitch or model of the PTC jumper being employed.
The marking strip must be fit in the jumper housing; its steadiness on the terminal block is guaranteed by the friction on the sides of the slots where the jumper is being inserted.

HMM.2 terminal block application examples
The marking strip dimensions are studied so that it cannot exceed the profile of any terminal block on which it can be applied, in order to avoid problems with numbers, cables or other accessories.
The marking strip can be applied in case of double jumpers.
It should be noted that it is possible to apply the marking strip where other accessories are present, without having to extract it in advance.



Examples of application on the VPD.2 terminal block
The marker is produced in strips 100 mm long, and supplied in green. The user can customise the strips length freely, depending on his needs.
The strips, made of polyamide, can be easely cut by using common pliers, as they are only 1.20 mm thick.



NOTE. The PTC/SP marking strip can be applied on any terminal block where PTC jumpers are used (see the list), except for HCD.1 and HMD.2N terminal blocks: here the shape of the jumper housing is such as to prevent the frictioning, which is necessary to guarantee a steady positioning and avoid the marking strip loss. Moreover, the jumpers on these two terminal blocks have a less deep insertion than all the others and therefore the presence of the jumper can be recognized without the need of a signaler.

Cross connections

Easy Bridge System

In order to guarantee proper safety conditions, once the insertion is performed and depending on the various connection schemes, which can be obtained using PTC jumpers, the following table is supplied:

PTC jumpers configurations

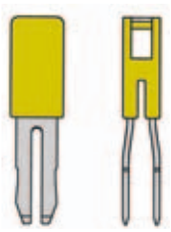
Cross connections

For HMD.2, HMF.4 ed FDP.2 terminal blocks

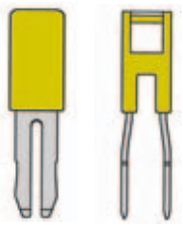
PH jumper



Terminal block	Jumper type	Cat. No.
HMD.2	**PH/2,5-4**	PH100
HMF.4	**PH/2,5-4**	PH100
FDP.2	**PH/2,5-4**	PH100

When there is the need to perform the cross connection between adjoining terminal blocks of different types (size and function), and an end section is interposed between them, a special PHM/2.5-4 increased pitch type jumper is available.

PHM jumper



Terminal block	Jumper type	Cat. No.
HMD.2	**PHM/2,5/4**	PHM01
HMF.4	**PHM/2,5/4**	PHM01
HMD.2	**PHD/2**	PHD02

NOTE:
To complete the insertion of the jumpers, the use of screwdriver is necessary.

POF permanent cross connections

Allowing the cross connection of two adjacent terminal blocks. Mounted in a suitable position in order to prevent injuries

Each **POF** jumper is composed by:
- 2 screws
- 2 sleeves
- 1 plate with 2 holes

All the components are in brass, with nickel plating.

NOTE:
*For terminal blocks that normally require POF connections, where they are to be inserted in "increased safety" installations (Ex e), the use of **PFX** cross connections is required; they include an anti-loosening washer.*

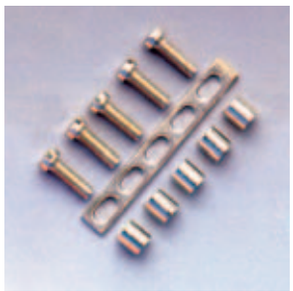
PMP commoning bars CPM shunting screws and sleeves



The **PMP** commoning bar, suitable for the multiple cross connection of several terminal blocks, whether adjacent or not, is supplied in lengths of 250 mm, with holes adequately speced according to the pitch of all terminal blocks.
The bar is supported and held in place by a special **CPM** screw and sleeve at the correct level of each element.
In the case the terminal boards are to be installed in (Ex e) “at increased safety” circuits, CPM screws and sleeves are equipped with unloosening washers and their part number becomes **CPX**.

POS switchable cross connections

If the linking of adjacent terminal blocks is occasional, a **POS** switchable cross connection may be used; it consists of:

- 2 screws
- 2 sleeves
- 1 linking plate with open slot, allowing easy opening and closing of the cross connection.

Terminal block	Cross connection		Screw M x l (mm)	Sleeve Ø x l (mm)

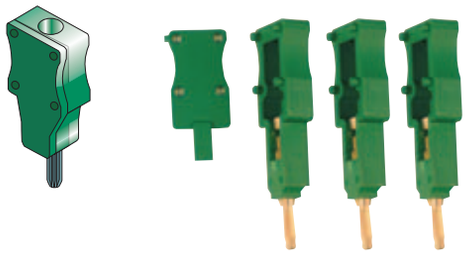
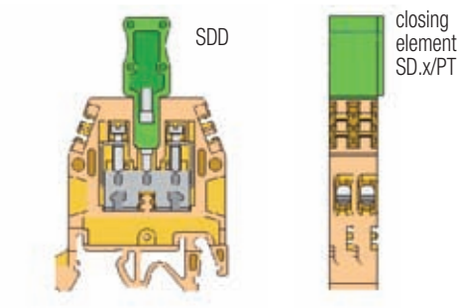
Modular test plugs



Modular test plugs allow to perform final control or multiple shunting on rail assemblies.
The modular test plug can be placed directly in the housing provided in the terminal block.
The extreme ease of use, allow to assemble such test plugs in whatsoever number of poles, according to the needs.

Modular test plugs for screw clamp terminal blocks



• with solder lug

SDD/5 Cat. No. **DD005**

pitch 5.5 mm.
for terminal blocks type CBD.2

version to be used with PTC jumper

SH7/PT Cat. No. **DH701**

closing element for SDH/7

SDH/5 and SDH/6 can be mutually combined.

PSD sockets - SDD plugs

For measuring and testing circuits which are linked up to terminal boards, special accessories are provided; such as:

- (**PSD**) insulated sockets which can be screwed onto the conducting body of the terminal blocks
- (**SDD**) bundle-type plugs in silvered brass.

LSN torpedo pilot bulbs

Cat. No.	Characteristics
FL201	Ø 6x26 mm torpedo bulb, provided with built-in stabilising resistor, for voltages from 12 to 48 Vac, to be used on terminal blocks type FLD.10/ F5L, FLD.10/F6, FPL.10.
FL202	Ø 6x26 mm torpedo bulb, provided with built-in stabilising resistor, for voltages from 70 to 380 Vac, to be used on terminal blocks type FLD.10/ F5L, FLD.10/F6, FPL.10.
KIT1224	For terminal blocks type SFR.6 and SFR.6/M.
KIT70380	For terminal blocks type SFR.6 and SFR.6/M.

LSH signal elements

For the blow-out status signal on fuse-holder terminal block type HMF4.
Suited to be used in both d.c. and a.c. circuits.

Type	Cat. No.	Rated voltage [Vdc - Vac]	Current I r.m.s. [A] (*)
LSH/12	LS001	12	2,1 mA
LSH/24	LS002	24	2,0 mA
LSH/48	LS003	48	2,2 mA
LSH/115	LS004	115	2,1 mA
LSH/230	LS005	230	2,0 mA

CIL signal circuit

For the blow-out status signal of fuse-holder terminal blocks type SFR.4 - SFO.4 - MAC.6 - SFL.10 and FPL.10.
Suited to be used in both d.c. and a.c. circuits.
Each package is supplied with:
- two contact blades
- a non polarised LED microcircuit
- a transparent protection

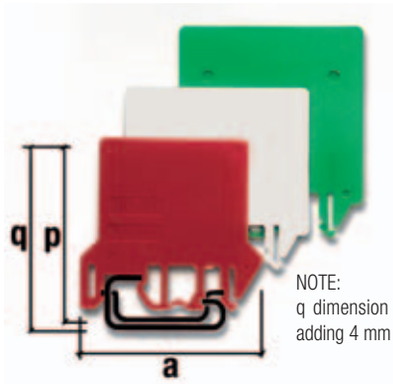
Components must be mounted in such a sequence.

Type	Cat. No.	Rated voltage [Vdc - Vac]	Current I r.m.s. [A] (*)
CIL/12	SF512	12	3,0 mA
CIL/24	SF524	24	3,2 mA
CIL/48	SF548	48	2,9 mA
CIL/115	SF515	115	2,3 mA
CIL/230	SF523	230	2,3 mA

(*) values are to be considered with a tolerance ±10%

DFU-DFH-DFP partitions

In polyamide available in **green**, **red** and **white**, colour, 1.5 mm thick, for the separation of elements on the terminal board, in order to make certain circuits easy to locate or to increase the insulation distances between terminal blocks.
The partitions can also be used to increase the insulation distances between adjacent parallel multiple commoning bars.



NOTE:
q dimension can be obtained by adding 4 mm to dimension **p**

Protection covers

PRT covers / SPS supports

(*) vertical dimensions including rail

For protection against accidental contacts or tampering of CDA, ACB series terminal blocks. Of self-estinguishing and transparent material, 2.3 mm pitch and 200 mm standard length (corresponding to a total width of four adjacent terminal blocks).
Covers are available in three sizes:

PRT/P 22 x 125 mm (Cat.No. PRT01)
- for the protection of ACB/BB terminal blocks

PRT/M 50 x 125 mm (Cat.No. PRT02)
- for the protection of ACB/CC terminal blocks
- for the protection of CDA terminal blocks.

PRT/G 85 x 125 mm (Cat.No. PRT03)
- to be used when conductors are arriving from the rear of the panel or when not connected clamping units must be protected.

PRT covers should be inserted on **SPS** supports, manufactured of self-extinguishing UL94V-0 classed ABS, 5 mm pitch, interposed between adjacent terminal blocks. Protection of the four adjacent terminal blocks is performed by means of **two** overlapped PRT covers.
Note: The ID Cat. No. (i.e. PRT01) is **referred** to a single item.

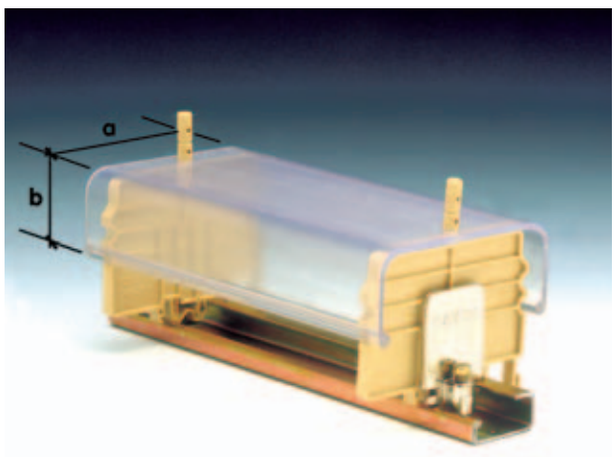
PZM protection covers and PZD supports

Terminal blocks having a cross-section up to 70 mm^2 can be protected against accidental contacts or tampering, by means of a **PVC** transparent cover, **supplied in a standard lenght of 2 m,** to be mounted on appropriate polyamide supports and to be inserted on PR/DIN, PR/3, "G32" type and TH/35.mounting rails.
They can be fixed by sealing the support ends.

PZM.4 cover (a = 64+2 mm / b = 32 mm)
Cat. No. **PZ330**

Suitable for terminal blocks with **overall dimension up to approximately 58 mm** (mounting rail included).
To be mounted with **PZD.4/SO** supports (Cat. No. PZ331)
Maximum dimension PZM.4 + PZD.4/SO
- on IEC 60715/G32 mounting rail = 70 or 82 mm (*)
- on IEC 60715/TH35 mounting rail = 65 or 77 mm (*)

(*) depending on the notches used, upper or lower.

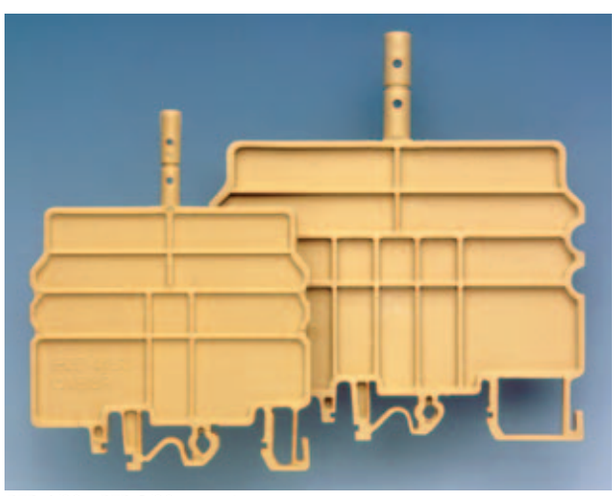


PZM.4 - PZM.6 covers

PZM.6 cover (a = 85+2 mm / b = 36 mm)
Cat. No. **PZ110**

Suitable for terminal blocks with **overall dimension over 58 mm,** (mounting rail included).
To be mounted with **PZD.6/SO** supports (Cat. No.PZ112)
Maximum dimension PZM.6 + PZD.6/SO
- on IEC 60715/G32 mounting rail = 82 o 94 mm (*)
- on IEC 60715/TH35 mounting rail = 78 o 90 mm (*)

(*) depending on the notches used, upper or lower.



PZD.4/SO - PZD.6/SO supports

PRP protections

The cross connection, consisting of a PMP multiple commoning bar and CPM screws and sleeves, already placed in a recessed position with respect to the terminal board, can be further protected from accidental contact using a nylon U-shaped cover having a standard length of 10 cm. This white-coloured cover, can also be written upon, to serve as a label or reference point on the terminal board.
On the cover suitable slits are arranged to facilitate its removal by using a screwdriver.

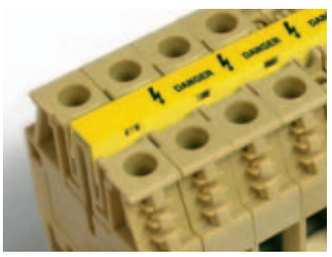
PRP protections

Warning plates

TQM-TTM-TUM-PRP/7/G



Made of self-extinguishing material, they are suitable to ensure operating safety on terminal blocks connected to live circuits.
Cabur warning plates bear signals and warning writings that can be fitted on top of the blocks by means of nylon screws. They are available in several models with various sizes depending on the types of terminal blocks.
Warning plates can cover three or four poles; in some cases the three pole plate is obtained from the four pole version by removing a pre-cut part.
For CBC.2-4-6-10/GR terminal blocks screwless PRP/7/G is supplied, to be inserted in the cross connection groove.

TAI

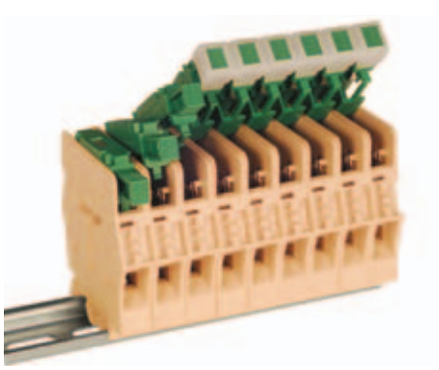
Possible danger status may be marked using **special triangular self-adhesive labels**

TAI/6 (Cat. No. TA001)
TAI/12 (Cat. No. TA002)

to be applied on safety and protection covers.

MSM handle

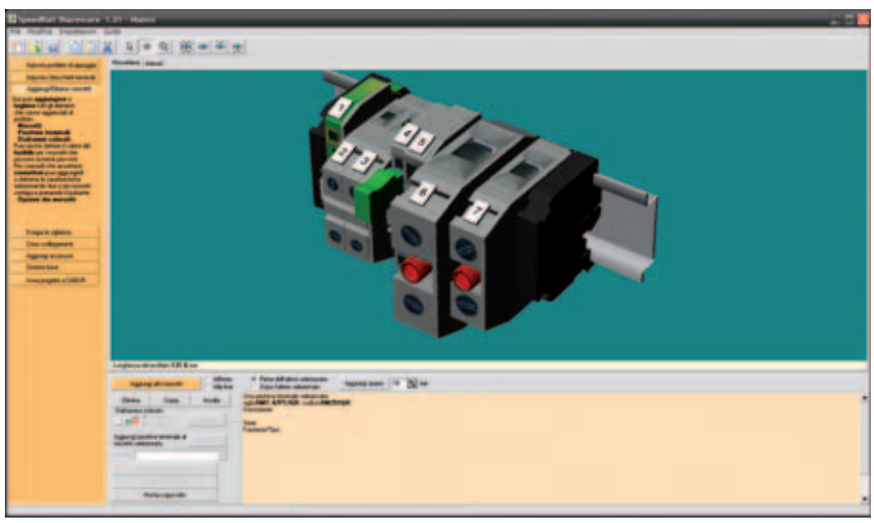
For the simultaneous disconnection of adjoining FPL.10 and SFL.10 terminal blocks.
Supplied in strips of 6 elements.
MSM (Cat. No. FC103)



Speed Rail

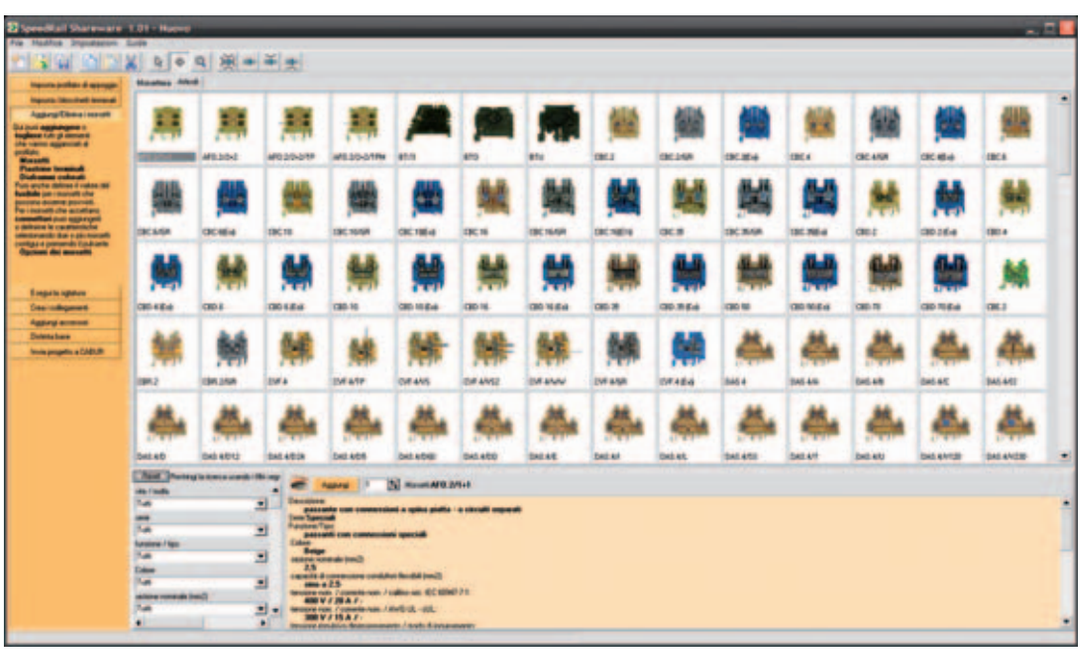
Windows™ application for terminal blocks for rails and panels type SWSR1.0 - Cat. No. SWSR1

- intuitive interface
- computer-assisted design
- 3D display
- no CAD platform required
- automatic creation of the Bill of Materials in table format and Adobe® Acrobat® PDF
- option to request an estimate with a single click
- trial version can be downloaded from the website
- licensed for installation on 5 PCs



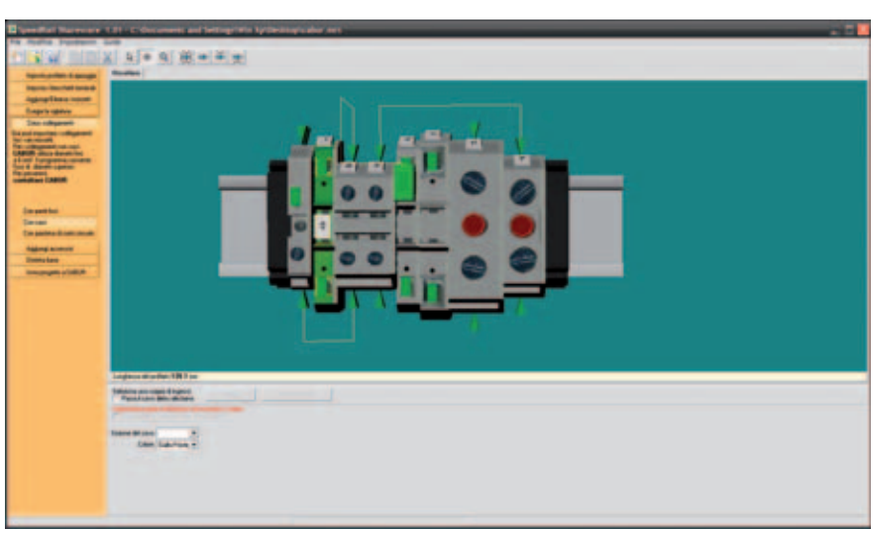
Speed Rail is a software application designed to simplify and speed up the construction of a terminal board using Cabur terminal blocks.

Thanks to the **intuitive interface** and the **graphic elements**, Speed Rail is easy to use and does not require specialist computer skills; furthermore, the software guides and assists you throughout every stage of the terminal board's design:

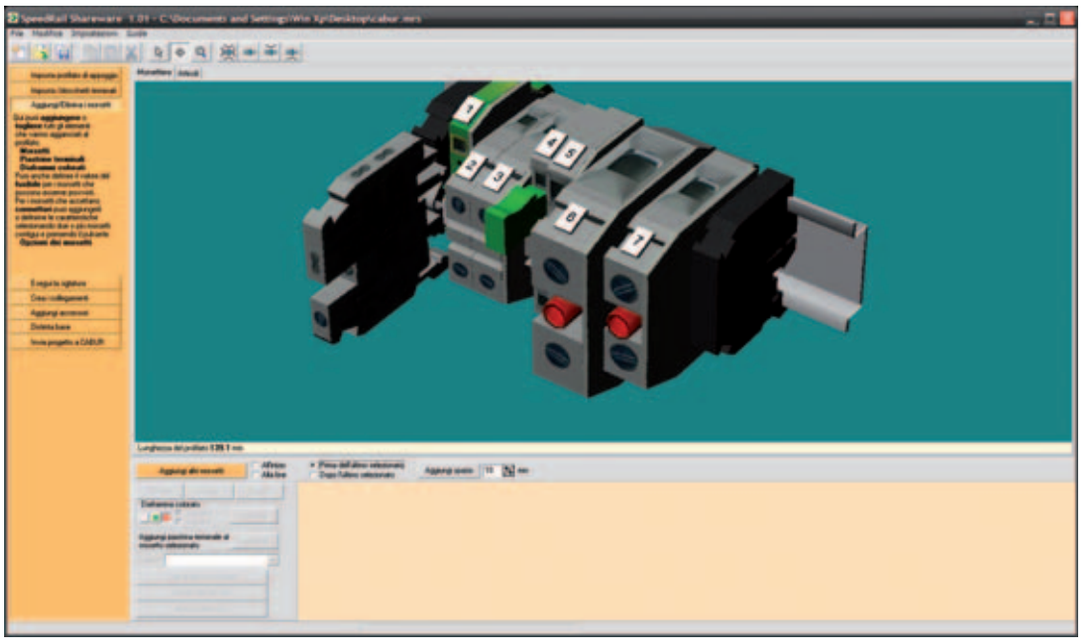


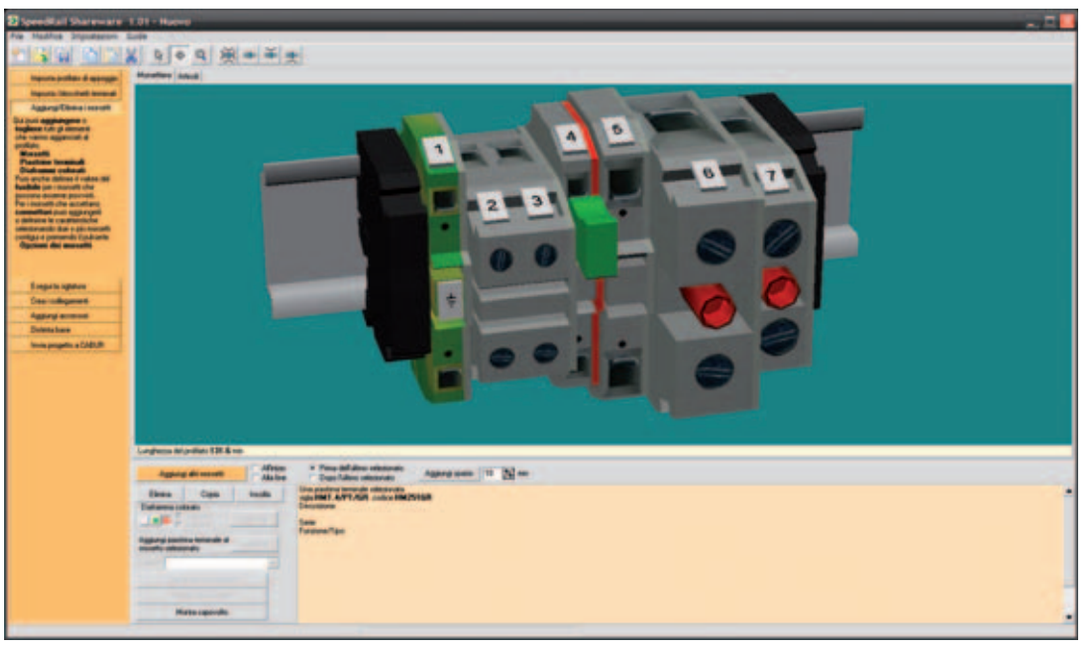
- automatically removes and adds end sections as needed to protect uncovered contacts or places them where insulation needs to be maintained;
- automatically includes cross-connection barriers between adjacent connections;
- reports the danger of short-circuit and suggests positioning an end section or cross-connection barrier;
- arranges connections in the best possible way to ensure maximum insulation.

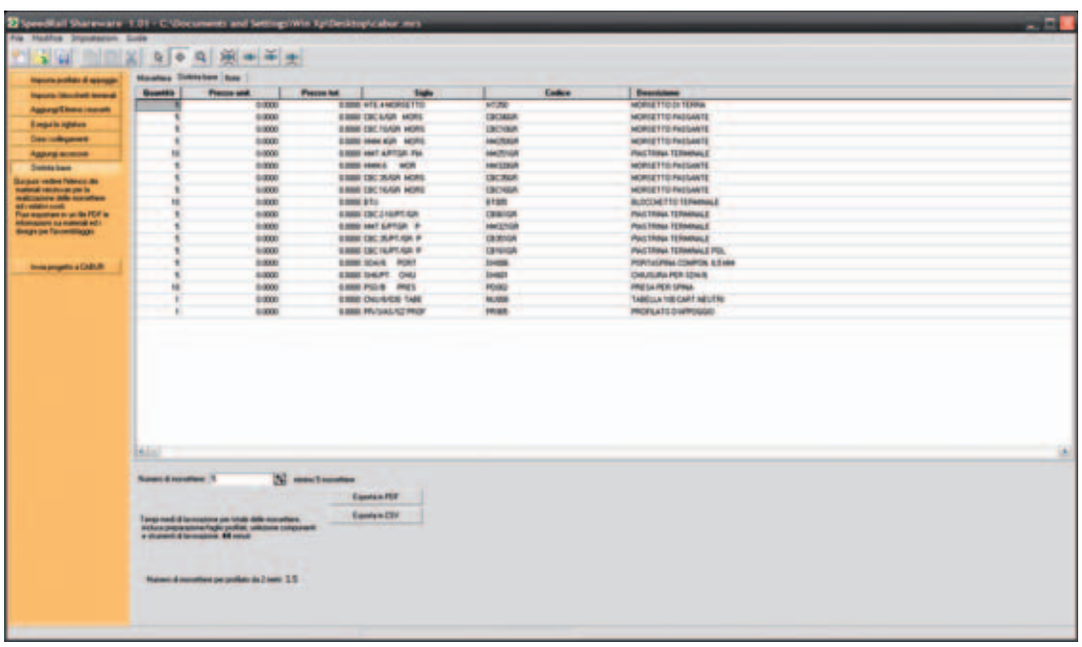
Speed Rail helps you **plan** your terminal board **quickly and efficiently**, starting from the holes in the mounting rail and the arrangement of supports, through to inserting terminal blocks, marking, creating connections between terminal blocks, adding the protection cover, covering each and every detail even up to inserting modular test plugs and derivation socket plugs.



Thanks to the **3D visualization**, you can see you terminal board from every angle, as if it were in your hands, and watch every phase of its development.







You can easily choose the terminal blocks best suited to your requirements, thanks to the technical data integrated into the software. Once you have identified the terminal blocks, Speed Rail will guide you through the choice of accessories, saving you time from searching for codes and verifying compatibility in catalogues.
Once all the details have been defined, Speed Rail will **automatically produce a bill of materials** in PDF format – even specifying the details and characteristics of the accessories, the marking, the terminal blocks used and the support mounting rail arrangements. You will be able to r**equest an estimate immediately** for the products needed and/or the terminal board assembly service.

A **trial version**, valid for 30 days, for complete, effective use of the software can be downloaded free of charge from the website **www.cabur.eu**
Please note the following limitations:
- trial period limited to 30 days of effective use for a maximum of 90 days as from the date of installation
- on-line updates are disabled

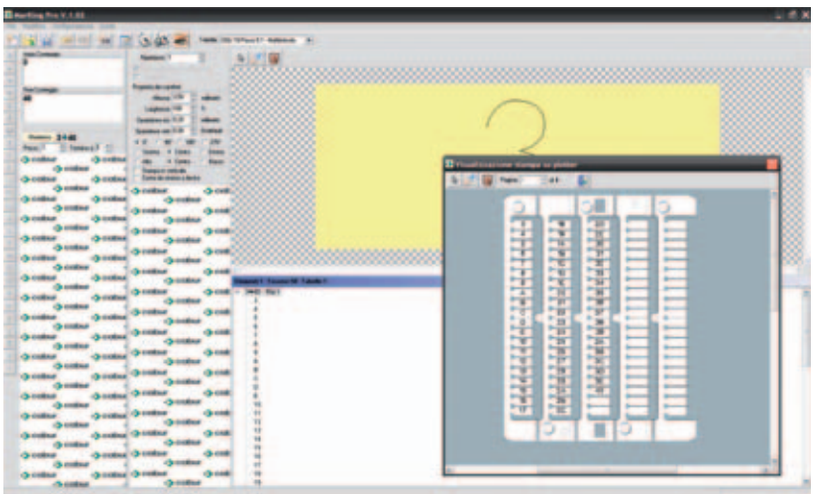
Technical requirements for installation:

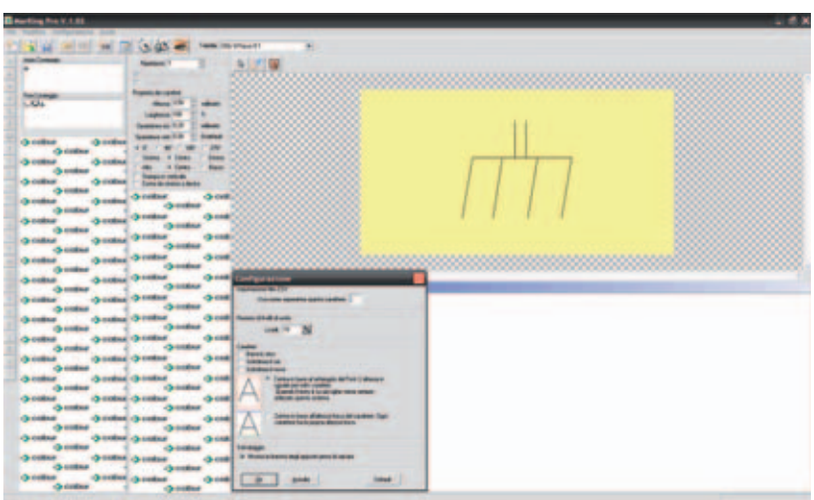
Platform: PC with Microsoft® Windows™ XP or later operating system.
Min. 512 MB RAM.
Hard disk space: 50 MB for basic installation, 155 MB for full installation (inc. video tutorials for software use).
Video viewer: Microsoft® Windows™ Media Player or compatible.

MarKing Pro

Marking system for Cabur's terminal blocks
Type SWMP1.0 - Cat. No. SWMP1

- user-friendly interface
- rapid marking realization
- software versatility
- it can work on plotters/already installed systems (it does not require new printers)
- possibility to ask for the marking service in a rapid and efficient way
- license for installation on 5 workstations/PC





MarKing Pro is an applicative software conceived for the marking of terminal blocks produced by Cabur.

The software, **easy to use and extremely versatile**, allows to set the parameters for the marking, by using sequences of characters and symbols which can be varied according to the specific user's needs, and to print on Cabur's cards (type **CNU/8**, **CNU/10** and **SHZ/1**) which can be selected from a database inside the software.

MarKing Pro system is **conceived to fit to the most common plotters on sale**, thanks to **plates** that allow to fit to Cabur's marking formats.

To ensure an instant usability of MarKing Pro solution, **the software is provided with the related adaptation plate**, selected on the basis of end Customer's specific needs.

Thanks to the **user-friendly interface** and to the graphic elements, MarKing Pro is easy to use and allows to see the final result before the printing and it does not require particular computer skills. Furthermore, Cabur offers a **service of marking realization** which can be provided on the basis of the files created by the Customer by using MarKing Pro. If you send your MarKing Pro files to Cabur, you will get an offer and a service as efficient as possible and with a sure result.

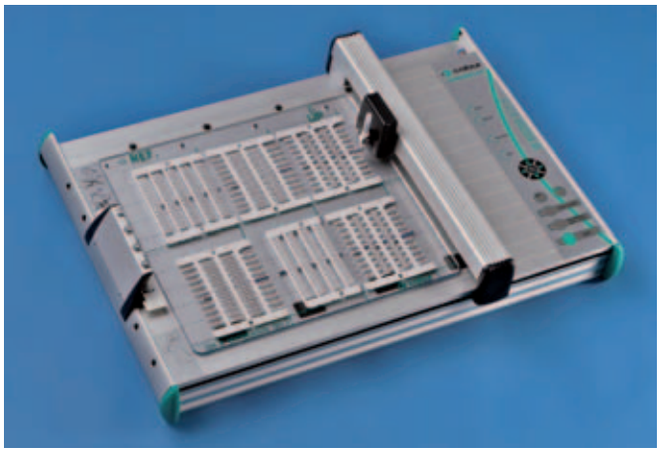
Technical requirements for installation:
Platform:
PC with operating system MS Windows XP or later.
Min. 512 MB RAM
Hard disk space:
7,5 MB for basic installation, 4 MB for help installation in any language.

Cabur Plotter System
Cat. No. KSPLOTTER

The CABURPLOT system consists of a flatbed A3 plotter which, **on a single plate**, lets you print on:

- sleeve tags to identify cables
- tags for terminal blocks
- tags for push-buttons
- tags for contactors
- modular strips for electrical distribution panels
- panel identification tags

The aluminium frame and innovative design, as opposed to other solutions available on the market, make CABURPLOT a leading, state-of-the-art system. Compared to similar products, CABURPLOT pens last longer. In addition to the classic, anti-dry pen, we've added an extra feature built into the system: a **special airtight pen holder**, which prevents accidental tampering and laborious manual operations outside the system.



TECHNICAL DATA

- Type: flat base plotter
- Printing area: 440 x 305 mm
- Pen holder: 4
- Power supply: separate power supply unit
- Input voltage: 100 – 240 V A.C. 50 – 60 Hz
- Output Voltage: 24 V D.C.
- PC interface: parallel and USB 1.1
- Dimensions: 660 x 440 x 125 mm
- Weight: 8 Kg

The package includes:
1 KSPLOTTER plotter + power supply unit + parallel cable + USB cable
1 code adaptation plate PADCABUR
1 anti-dry pen, diameter 0.35 mm
1 pack of 5 indelible black ink cartridges
1 MarKing Pro Software on CD, including a licence for 5 installations and complete user manual in electronic format

Accessories

Cat. No.	Description
PADCABUR	Adaptation plate for KSPLOTTER plotter
PADGRAPH	Adaptation plate for Graphtec plotter
PADMUTHO	Adaptation plate for MUTOH plotter
PEN025CAB	Anti-dry pen for plotter – diameter 0.25 mm
PEN035CAB	Anti-dry pen for plotter – diameter 0.35 mm
PEN035GRA	Anti-dry pen for Graphtec plotter – diameter 0.25 mm
INKCART5	Indelible ink (5 cartridges per pack)
INKBOTT1	30 ml bottle of ink
KITPULIZIA	Pen cleaning kit
POMPASP	Pen reactivator

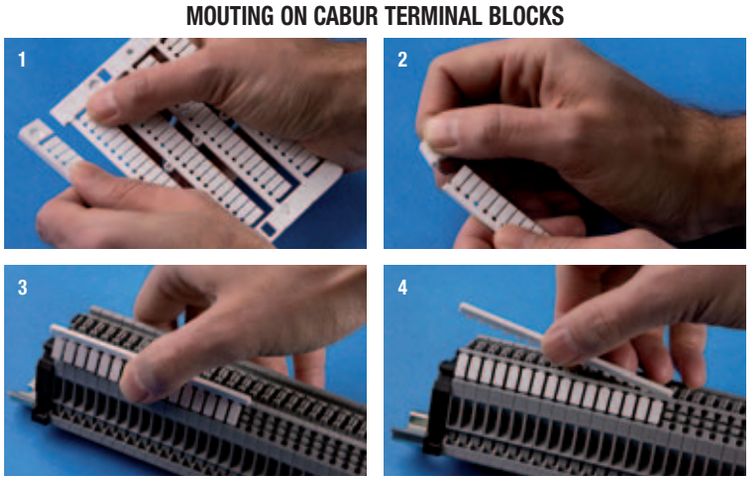
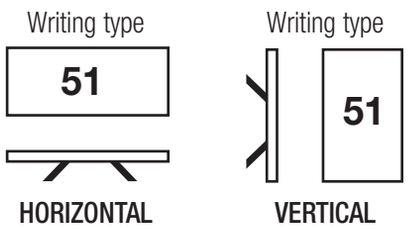
MOUTING ON CABUR TERMINAL BLOCKS



CNU/8/51 Writing type HORIZONTAL / VERTICAL

- Marking tags suitable for **marking all types of terminal blocks (screw-clamp and spring-clamp)** in tables of 100 elements in packs of 500 tags
- In white polycarbonate with black printing, to be applied directly into position either before or after preparing the terminal board
- **Tag dimensions: 8 x 5.1 mm. Pitch on CBC.2/GR and HMM.2/GR**
- **Mounting of single tag on all Cabur terminal blocks**



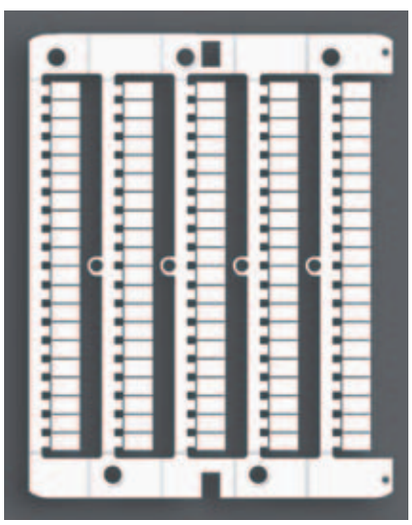


Table **CNU/8/51** Cat. No. NU0851

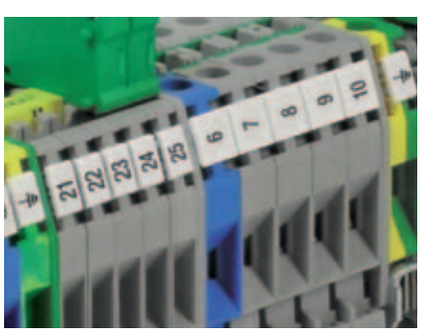

Note: those shown in the tables are the standard types of markers that are normally available; on request, we can supply tags of all types with: numbers, letters, symbols and customised logos. Please see page 167 for more details.

CNU/5

Marking tags suited for **marking BPL.4 and TPL.4 modular terminal blocks. Tables of 100 elements.**
In white polyamide with black printing, to be applied directly into position either before or after the composition of the terminal assembly.
5 mm standardised pitch and 5 mm high.

SNZ.4 for screw-clamp terminal blocks RN.1

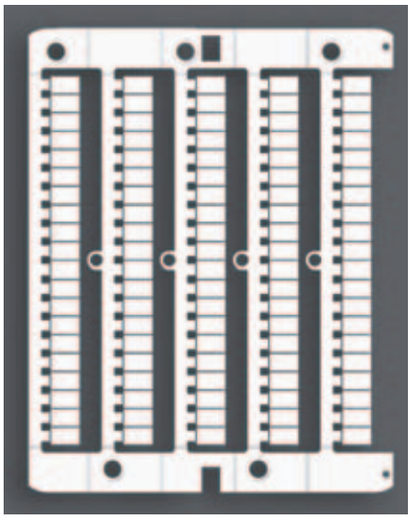
Marking	SNZ/4	
	Type	Cat. No.
Blank	**SNZ/4/00**	SN008
From da 1 to 9	**SNZ/4/19**	SN819

SHZ numbering strips can be mounted on the sides of the terminal block or in the appropriate housings provided in the upper part of the terminal block itself.

(*) for availability, please contact our Sales department

tags SHZ/1

Special marking

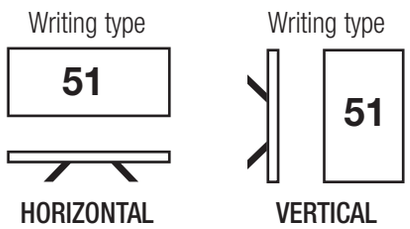


Cabur can supply, on request, special marking tags with numbers, letters, symbols and customised logos in packs of 500 tags.

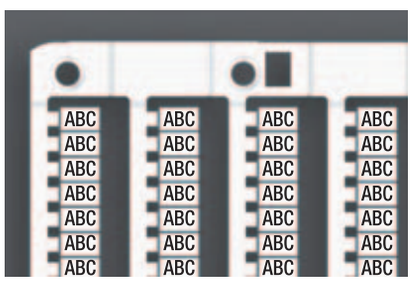
Special marking	
Cat. No.	**Description**
NU0851SP	CNU/8/51 - special marking
NU0861SP	CNU/8/61 - special marking
NU1051SP	CNU/10/51 - special marking
NU1061SP	CNU/10/61 - special marking
SH004SP	SHZ.1 - special marking

Request special marking by specifying the following on the order:

a. Article cat. no. chosen from those specified on the table (e.g. NU0851SP)
b. Quantity of tags needed (min. 500 pcs. / 1 pk.)
c. Writing type (horizontal or vertical)
d. Content (text, numbers, symbols) to be printed on the tags (e.g. A1B)



To optimise the service, as an alternative or in addition to that required at points c) and d), we recommend sending Cabur a MarKing Pro file created with the specific requirements of the order.



For example, by ordering:
Cat. No.: **NU0851SP**
Quantity: **1000**
Writing type: **horizontal**
Content: **ABC**
An order will be placed for 2 packs of 500 tabs each of CNU/8/51, customised as requested.

Cross-reference table of tags for marking terminal blocks

Following an update of the product line, some markings of Cabur terminal blocks have been replaced with new tags.
To ensure maximum compatibility in use, the hook on the Cabur terminal block has not been changed in any way.
That means, **earlier batches of tags, which are no longer produced, and new tags can both be used on our terminal blocks.**

Specific accessories

Short circuit plates

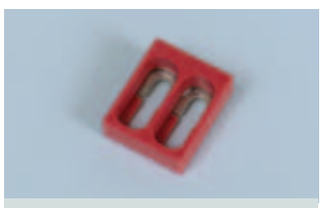
SCB/6/PO/2 Cat. No. **SB203**

Short circuit plate for two adjacent SCB.6 terminal blocks

SCB/6/PO/4 Cat. No. **SB204**

Short circuit plate for four adjacent SCB.6 terminal blocks

Allow the simultaneous earth connection of current transformers already connected to SCB.4, SCB.6 or SCX.10 terminal blocks.
They are made up of special plates and sleeves guaranteeing the correct operational sequence.
The plates, in the open position, avoid the translation movement of slide-links, preventing the disconnection of current circuits.



HSCB/6/PO/2 Cat. No. **HB203**

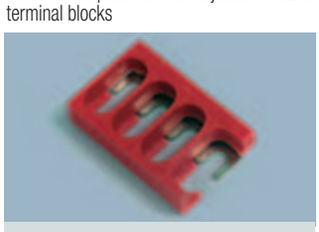
Short circuit plate for two adjacent HSCB.6 terminal blocks

HSCB/6/PO/4 Cat. No. **HB204**

Short circuit plate for four adjacent HSCB.6 terminal blocks

SCB/4/PO/2 Cat. No. **SB303**

Short circuit plate for two adjacent SCB.4 terminal blocks

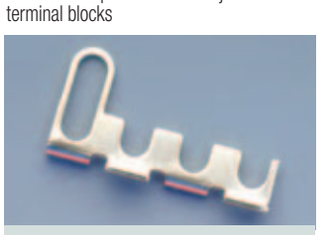


SCB/4/PO/4 Cat. No. **SB304**

Short circuit plate for four adjacent SCB.4 terminal blocks

SCX/PO/2 Cat. No. **SC103**

Short circuit plate for two adjacent SCX.10 terminal blocks



SCX/PO/4 Cat. No. **SC104**

Short circuit plate for four adjacent SCX.10 terminal blocks

(*) supplied assembled as in position A. In order to be inserted into the slot of the plate, it must be dismounted as in position B, then reassembled and screwed into the body of the terminal block.

Short circuit screws and sleeves

SCB/6/CPM Cat. No. **SB205**

Sleeve to be used with SCB/6/PO link

HSCB.6/CPM Cat. No. **HB205**

Sleeve to be used with HSCB/6/PO link

SCB/4/CPM Cat. No. **SB305**

Sleeve to be used with SCB/4/PO link

SCX/CPM Cat. No. **SC105**

Sleeve to be used with SCX/PO link (*)

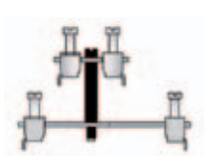
Internal/external cross-connection devices

FVS/VCI Cat. No. **FV107**

Screw and sleeve to perform the internal link between the front and back conducting bodies of FVS.4 terminal block.

FVS/VCE Cat. No. **FV108**

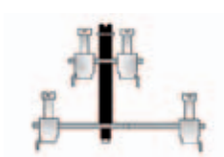
Screw and sleeve to perform the internal and external link between the front and back conducting bodies of FVS.4 terminal blocks.



DAS/VCI
internal cross-connection

DAS/VCI Cat. No. **DS107**

Screw and sleeve to perform the internal link between the front and back conducting bodies of DAS.4 terminal blocks.

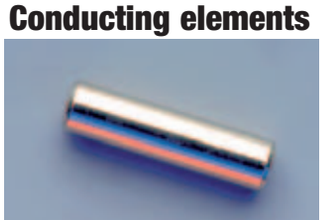


DAS/VCE
internal + adjoining front-cross connection

DAS/VCE Cat. No. **DS108**

Screw and sleeve to perform the internal link between front and back conducting bodies or to externally link the conducting bodies of adjacent terminal blocks, of DAS.4 terminal blocks.

Conducting elements



CO/5 Cat. No. **VL103**

Ø 5 x 20 mm - in brass for terminal block types:
SFO.4 - SFR.4 - SFR.6/M - FLD.10/F5 - HMF.4 - VLM.10

SFC/CO Cat. No. **FC102**

Ø 6,3 x 32 mm - in brass for terminal block types:
FPC.10 - SFC.10 - SFR.6 - with the option of inserting an SDD/2 test plug

Terminal blocks suited for Ø 5 x 20 mm or Ø 6 x 32 mm fuses can be used as simple disconnection blocks by inserting special **conducting elements**.

Screening lug

CBD/SH Cat. No. **CB009**

For the connection of the cable shielding - to be used on terminal blocks type CBD.2, 4, 6, 10.

Screwdrivers and pliers

Screwdrivers for the activation of the spring on **H** series terminal blocks

CCH/2,5-4

Cat. No. **CCH02**

blade	0,5 x 3 x 80 mm
length	160 mm

CCH/6

Cat. No. **CCH06**

blade	1 x 5,5 x 125 mm
length	220 mm

Screwdrivers insulated for voltages up to 1000 V

CCV/2,5

Cat. No. **CCV03**

blade	0,4 x 2,5 x 75 mm
length	160 mm

CCV/4

Cat. No. **CCV04**

blade	0,8 x 4 x 100 mm
length	195 mm

CCV/5

Cat. No. **CCV05**

blade	1 x 5,5 x 125 mm
length	220 mm

1000 V

The ergonomic shape of the handle guarantees comfort during all types of use. Furthermore, each handle has slip-proof rubber inserts, in light colour, to ensure a good grip on the tool.

Crimping pliers

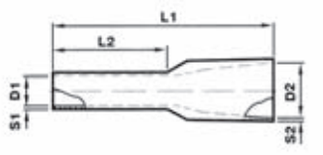
This tool has been designed for plant engineering. The parallel movement of the matrices generates a 10000 N force. The entire tool is coated with plastic, which makes it ergonomic and comfortable to use.

Type	Cat. No.	Description
UMCT	UMCT3149	Crimping tool
UMPU02510	UMCT3127	Matrix for ferrules from 0.25 to 10 mm²
UMPU1625	UMCT3153	Matrix for ferrules from 16 to 25 mm²
UMPU3550	UMCT3154	Matrix for ferrules from 35 to 50 mm²
UMPI1525	UMCT3129	Matrix for eyelets and spade lugs from 1,5 to 2,5 mm²
UMPI4060	UMCT3128	Matrix for eyelets and spade lugs from 4 to 6 mm²

Ferrules

WP ferrules with insulated collar

Reference drawing



For cable termination, a complete range of single entry bootlace ferrules is available. In electrolytic tinned copper, with polypropylene insulation.

WPD ferrules with insulated collar – double entry

Double entry ferrules are made of electrolytic tinned copper and insulation in special polyamide for high temperatures (+ 110 °C).
These ferrules are designed to be used in connections requiring safe and rapid shunting; indeed, current tendencies towards the miniaturisation of electrical circuits provide a valid and economic use for these terminals.
The unique and large entry space comfortably takes the width of two wires.

Rail assembly composition guide

To order, terminal boards can be supplied pre-assembled in standard configurations with continuous demand. For the composition, please use Speed Rail (see page 160). Alternatively, use the diagram given below. Both instruments are also valid for simply requesting an estimate.

GENERAL INFORMATION

Company .....

Address .....

Telephone ..... Fax .....

E-mail .....

Contact person .....

LIST OF MATERIALS

Type of mounting rail ..... Cat. No. .....

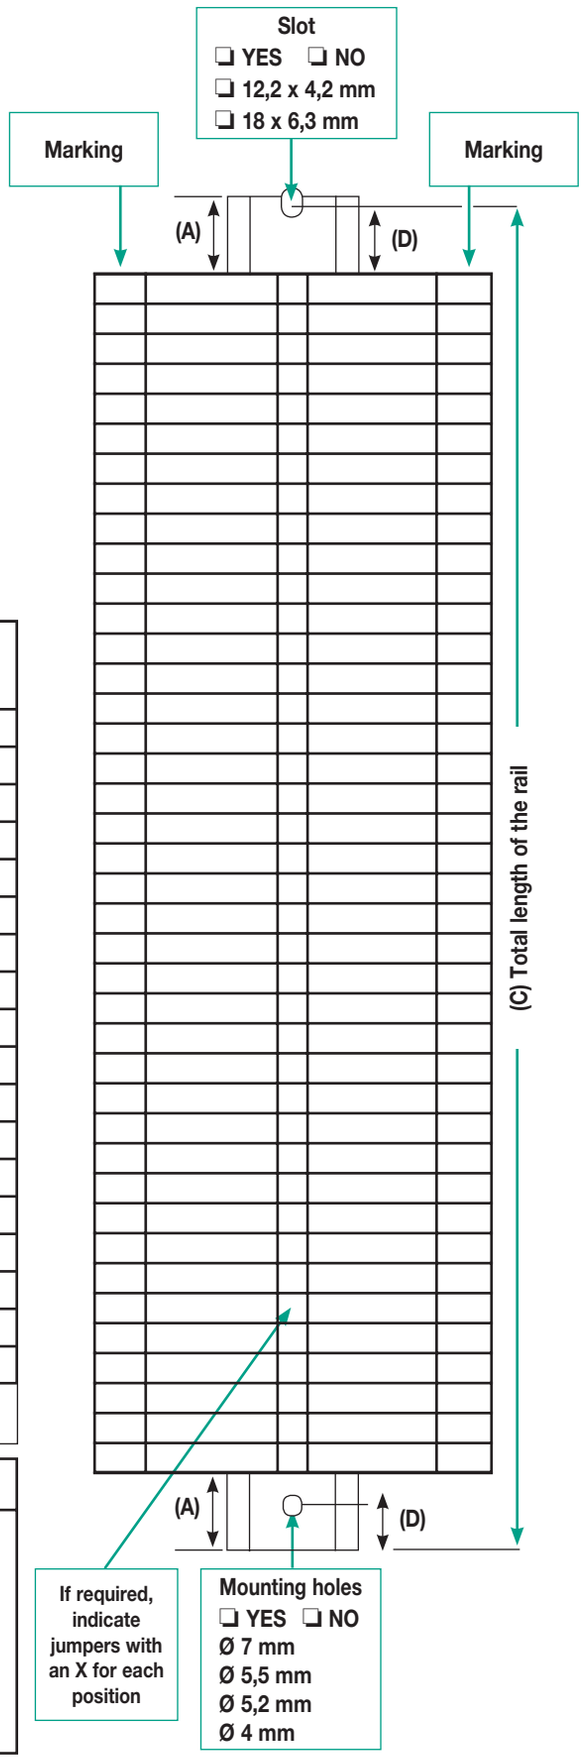
Components	Position	Qty.	Total thickness (mm)	Total length (mm)

(B) Total length (mm) .....

Computing the total length of the rail (c)

(A) Distance from the rail edge (mm) .....
(B) Total length of components (mm) .....
(C) Total length of mounting rail (mm) .....
(D) Slot or hole centring (mm) .....

No. of rail assemblies required .....
Date of request .....



Please highlight all exact positions for each terminal board and accessory selected, including terminal blocks, partitions, cross connections, assembly tolerances etc. For assistance, please contact Cabur.
