General characteristics

SM1P... and SM1R... are modern circuit breakers with thermal and magnetic trip releases and high breaking capacity.

Motor control and protection of up to 22kW (400V) are possible by choosing the suitable adjustment range, 0.1 to 40A.

The dimensions of SM1P... breakers are compliant with the DIN43880 standard, allowing them to be mounted in all modular enclosures on the market.

A magnetic trip indicator integrated on the SM1R... breakers avoids dangerous closing operations during short-circuit conditions, previously disconnected by the breaker. SM1R... breakers are Type E-certified according to UL508 (certification obtained for range from 0.1 to 6.5A; pending for all the other ratings).

SM1P... and SM1R... motor protection circuit breakers are suitable for isolation in accordance with IEC/EN 60947 standards and can be padlocked in OFF position without using accessories.

Their high breaking capacity consents to exclude protection fuses on the majority of the installations.

General characteristics

SM2R... and SM3R... are modern circuit breakers with thermal and magnetic trip releases and high breaking capacity. Motor control and protection, up to 45kW (400V) are possible by choosing the suitable adjustment range, up to 100A. SM2R... and SM3R... breakers are Type E-certified according to UL508. The SM2R... and SM3R... types are suitable for isolation according to IEC/EN 60947 standards and can be padlocked in OFF position without using accessories. SM3... has a trip function which indicates thermal and magnetic tripping. Their high breaking capacity consents to exclude protection fuses on the majority of the installations.

① SM1PF00 20 has a single 0.2A thermal adjustment and magnetic tripping at $6 \times I_n$ (1.2A).

② When fitting more than one breaker side by side, without leaving space between each to consent free air circulation on the breaker sides, and have simultaneous operation, the thermal trip adjuster must be positioned at a value 15% higher than the rated motor current.

THERMAL TRIPPING CURVE (AVERAGE TIMES)

Three-phase balanced operation

Two-phase operation (phase failure/single phasing)

Tripping times can have a $\pm 20\%$ deviation with respect to the average tripping curve value above.
