FOR ALSACE

Guarantee

Our clients can trust in the fact that all our production is done in our region: Alsace. This commitment to the area has lasted for almost a century.

We see in SES-STERLING's territorial anchorage a symbol of stability and trust. These are the core values that we develop in the relations with all of our partners. That is why our company decided to associate with «la Marque Alsace».

Assets and Ambition

SES-STERLING and «la Marque Alsace» have the ambition to create a virtuous circle over the long term in order to promote the values of our regional identity that we consider as an asset. We can see that the «A Heart» logo refers to a heart, a pretzel or even to the traditional headdress of Alsace. But behind the pretzel, we want to highlight our territorial values as defined by «la Marque Alsace» on their website.

«Excellence & pioneer»: Almost one century ago, a family of pioneers seeking excellence founded SES-STERLING. Throughout the decades, this pursuit of excellence has become part of the DNA of our company. Nowadays our laboratory and our research and development department are working everyday in order to retain the pioneer outlook set by our founders.

«Harmony & creation of bonds»: SES-STERLING has always worked to create and maintain strong links with countries in its tri-national area (France, Germany and Switzerland). These links then extended to England and Belgium. Nowadays all the experience that we have gathered gives us a legitimate and strong presence on the international market.

All these characteristics are an inherently part of our regional culture, both on individual and company level. That's why we want to commit to these values and promote them together with «la Marque Alsace» both nationally and internationally.

Production workshops

Material mixing

This is the heart of the preparation of all the materials used for rubber processing and some of the materials used for flexible extrusion. Equipped with mixers, preformers and an extruder, the workshop also recovers 90% of the plastic materials used in production for recycling.

Rubber

The rubber mouldings (grommets, protectors, caps, feet and washers) are manufactured on several presses. SES-STERLING designs and maintains the moulds. Extruders are used to produce HELAVIA® and SILAVIA sleeves.

Flexible extrusion

The machines, which are automatically fed with various materials from the plant, generate 8 million extruded metres of sleeves, profiles and other cable fixing accessories.

Injection

With several presses all fed automatically by a latest generation material centre, a wide range of thermoplastic materials is injected to produce standard or specific parts (cable ties, grommets, caps, etc.) from small to large series.

Rigid extrusion - LAUPLAST

The LAUPLAST site is equipped with numerous extruders and punching machines for the manufacture of cable and installation cable trunking, PLIOLINE protective sleeves and profiles for distribution boxes. The entire production chain is controlled here, from the receipt of plastic materials, production, packaging and storage to the dispatch of the finished products.

Braided sleeving

A large number of assembly and braiding machines ensure the production of PLIOSIL expandable braided sleeves. In order to meet all requirements, they are available in small or large dispenser boxes, in long industrial reels and in lengths cut to customer specifications.

Production workshops

Tools

In this workshop, we assemble the sleeve expanders used with the sleeves produced by SES-STERLING as well as automatic stripping pliers adapted to the needs of the aeronautical, railway and photovoltaic industries. Specific pliers developed according to the requirements of our customers are also offered.

Printing

Equipped with letterpress and inkjet machines, the print shop produces standard or customised marker cards to provide personalised identification of your facilities.

It also has offset equipment for printing all our catalogues.

Marking

Various marking techniques are mastered: inkjet, hot printing, thermal transfer, laser engraving and embossing on different types of products, mainly marker rings, heat-shrinkable marker sleeves and marker bars.

Packaging

The packaging activity consists of quantifying, packaging and labelling all the articles produced in bulk in the company. With a large fleet of packaging machines, including a high-tech multihead weigher, the workshop packages all the articles produced by SES-STERLING.

Warehouse / Shipment

A department that stores and manages raw materials, semi-finished products and finished products. Equipped with a racking system with its three-directional machines and an automated storage system, it is here that all orders are prepared, checked and then dispatched.

Insulating sleeving and sleeves

Insulating sleeving and sleeves

Insulating sleeving is used for the protection and the insulation of electric cables.

It is available in different colours and 3 materials:

- **PVC**: this material is available in different colours, has a good resistance to light and is used for the marking of cables. Resistant to ozone, ageing and acids, the PVC sleeving is specially used for the isolation of electric cables, mechanical protection, the transport of fluids with low pressure at room temperature (except special aggressive products).
- **TPE**: this material looks like rubber and is used for applications that need a good resistance to high and low temperatures. Furthermore. It offers more elasticity and flexibility than PVC.
- **Silicone**: specially used for electrical insulation, this halogen free material has a good resistance to high temperatures.

All the sleeving are available in sleeves upon request.

The shrinkage of our PLIO and PLIOFINE heat shrinkable sleeves and sleeving needs to use a source of heat such as hot air, infra-red lights, hot water or steam. The temperature that is higher than 100°C, must be regulated so that the heat does not damage the articles to protect.

You will find our **heat guns** on pages D7.

Heat shrinkable insulating sleeving in flexible PVC

PLIO-R

PLIO-R

Shrink ratio: 2:1

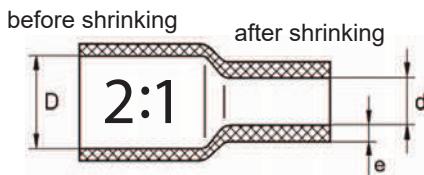

Material: flexible PVC
Operating temperatures: -20 to +90°C
Shrink temperature: 120°C
Longitudinal shrinking: 20 to 30 %
Dielectric strength: 20 kV/mm
Flame resistance: V0 UL94

Specification: PLIO-R heat shrinkable insulating sleeving is an entry-level product for everyday use. It is characterised by its thin wall, its wide range of colours and its glossy appearance. It has the advantage of covering diameters from 2.5 to 80 mm before shrinking.

To prevent shrinkage due to temperature during transport and storage, this tubing is supplied inflated with low pressure air and sealed at both ends.

Store below 18°C.

PLIOFINE SAM

Shrink ratio: 2:1

Material:	cross-linked Polyolefin
Operating temperatures:	-55 to +125°C
Min. shrink temperature:	120°C
Longitudinal change:	±10 % ASTM D2671
Dielectric strength:	20 kV/mm IEC 243
Flame resistance:	self-extinguishing ASTM D2671
Fluid resistance:	good to excellent ISO 1817, ISO 37 MIL-1-23053
Application:	general purpose

Heat shrinkable tubing PLIOFINE is composed of cross-linked Polyolefin (derived from polyethylene), unlike heat shrinkable sleeving PLIO "R" it cannot be melted or welded and has excellent chemical properties. It is cost effective. Dielectric properties, ageing and weather resistance are excellent, and the sleeving needs no special storing conditions as it remains inert up to +50°C.

Pull-in aid and portable hot wire cutting machines

for PLIOSIL expandable braided sleeving

SES

Pull-in aid PLIOSIL

Applications: PLIOSIL pull-in aids enable a bundle of cables to be routed and channelled without snagging. They make it easier to use the expandable braided sleeves in the PLIOSIL range, particularly for long sleeves. It's a good alternative to the wire puller.

Benefits:

- requires only one operator, whatever the length of the sleeving.
- prevents the bundle head from getting caught in the mesh of the braid.
- allows instant unhooking of the bundle head without the need for tools, loss of wires or removal of any adhesive.
- saves time and consumables.

Operating instruction in video

How to use : Insert the wires into the braided sheath sleeve over a distance of only 20 to 30 cm, to enable them to be locked in tension (1st push-pull effect). This sleeve is already connected to a pull-in aid.

Push the pull-in aid into the final sleeving, even over long lengths, using the push-pull effect.

Once the pull-in aid has been pulled out, remove the wires from the sleeve and repeat the process, without destroying them or dismantling them in a long and tedious process.

ELECTROFLEX flexible conduit with spiral reinforcement

The ELECTROFLEX tubing is produced with a spiral reinforcement in rigid PVC and is therefore non-metallic. It can be easily cut with a knife or scissors. Very flexible it withstands a very low bending radius. The inside is smooth and allows cable to pass through easily and it can coil around its own diameter without flattening or deforming.

A7/4 - PLIOWELL conduit

Insert conduit - mounting is complete

The extremely quick and easy one hand assembly and dismantling is very economical. Insert PLIOWELL corrugated flexible conduit into the gland for connection.

In order to disconnect a special opener has to be put on the conduit, inserted into the gland until the stops of the corrugated conduit deepening are pushed outside. Then pull off the conduit.

These steps can be done with only one hand.

Advantages:

- Quick and easy one-hand assembly/dismantling - also in difficult to reach positions,
- The small glands body allows close bunched mounting,
- Front side dismantling,
- High security,
- Vibration cannot disconnect the glands,
- The conduit can only be disconnected with the special opener,
- Humidity protection and splash guard,
- Conduit rotating at the threaded joint. No torsion at the conduit,
- Ecologically priced - halogen free polyamide - glands can be 100% recycled,

Fields of application:

- Mechanical engineering
- Industrial facilities
- Robotics - Handling
- Car
- Shipbuilding

SES-STERLING specialises mainly in Polychloroprene (Neoprene / Baypren). For special needs, other qualities can be produced (e.g. EPDM, NBR or Silicone).

SES-STERLING always seeks to extend its programme of mouldings for the electrical industry. Many new designs are added each year where we have the customer's cooperation and where a small contribution is made by the original customer towards the tool costs. All sales and manufacturing rights remain the property of the SES-STERLING.

SES-STERLING executes all the orders it receives for new items, without research property rights filed. The manufacture and sale of new items are therefore the unique responsibility of the Company who places the order.

Injected mouldings in PLIOPRENE TPE

SES-STERLING markets injected mouldings made of TPE material under the name PLIOPRENE.

TPE is a thermoplastic elastomer with exceptional properties.

PLIOPRENE TPE looks like rubber and is used instead of PVC for applications requiring better resistance to high and low temperatures and offers greater flexibility and elasticity.

Grommet strip and PLIO® tapes

PLIOBORD is recommended for cable protection and reinforcement against mechanical strain. Grommet strip obviates the use of moulded grommets or special parts.

Self-weld tape SI-303 in silicone elastomer can be used for difficult insulations within a wide temperature range. Its trapezoidal shape enables insulation of regular thickness that starts to vulcanize at room temperature creating a homogeneous, welded and durable sleeving.

PLIOFINE A 720 is an ultra-thin tape that shrinks when heated in the same way as our heat shrinkable sleeves in polyolefin and is self welding.

SI-303

Material:	SI
Colours:	black - red
Operating temperatures:	-70 to +250°C
Ultimate elongation:	>400 %
Dielectric strength:	16 kV/mm
Volume resistivity:	10 ¹⁵ Ω.cm

Specification:

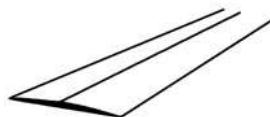

After rolling up on the object, the ribbon is welded onto itself by vulcanization and creates a compact and homogeneous insulation.

**Example for order:**

The use is simple. The rolling up of the layers must be done by overlapping the preceding one of half. The triangular shape of the ribbon makes it possible to obtain a regular thickness thus.

Important! SI-303 is available in small quantities. It must be stored in a fresh place. Ribbon SI-303 is welded onto itself at ambient temperature. It is possible to accelerate the process by means of a gas-fired warm air heater, at a temperature of +150 with 200°C during 5 to 10 minutes.

Code marker cards

The standard quality of the TEV material used in SES code marker strips results from several years of research in collaboration with domestic and foreign users. It consists of cotton protected by a special transparent film yielding excellent properties with regard to ageing, marking and legibility. Quality is permanently controlled and adapted to latest technical requirements.

The printed reference marks are protected by a varnish which gives them a good friction resistance, with various dust or deposits, like with certain chemical substances. Special cards EV are provided with a self-protection thanks to the covering of their impression by the transparent part of the ribbon.

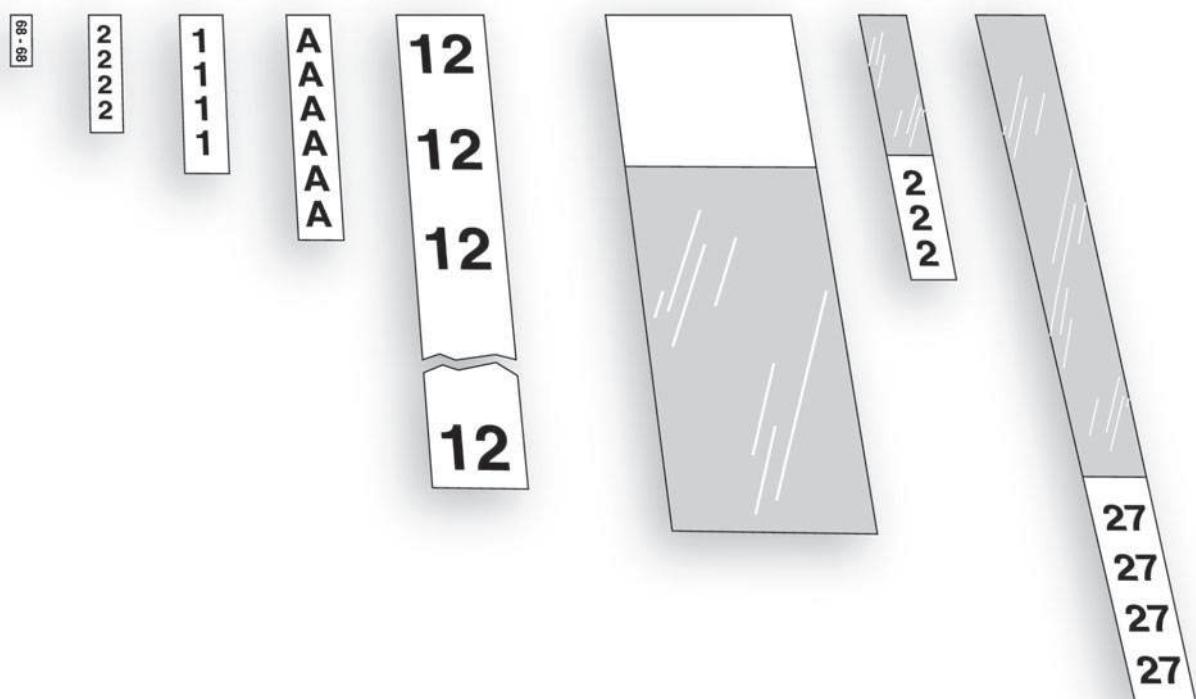

With more than 5000 types of standard reference marks, SES-MARKERS® cards allow a location before or after wiring or connection.

Ideal for work of maintenance and the repair of electric wiring. SES-MARKERS® code markers are a European product manufactured by SES-STERLING.

Protecting varnish can be applied with a spray gun or a brush. Use the very soft brush in the lid to avoid mechanical damage of SES-MARKERS® printing.

It is not to be used in the proximity of fire or an incandescent source, and working premises must be well ventilated.

All safety regulations relative to solvent containing lacquers or flammable liquids are to be respected when using protective varnish.

• Protective varnish SES-LACK

**Especially conceived in respect of the safety requirements of the users
(directive 67/548/CE and decree CMR 2001-37)**

This varnish, the formulation of which was especially established using solvents "not poisons", brings to SES-MARKERS® marker cards a completely transparent over-protection. It leaves a film, not yellowing, which is not scaled and does not crack.

It prevents corrosion, and provides an additional protection with respect to the harmful atmospheric agents (moisture, salt spray).

Especially formulated in respect of the directives on the dangerous products, the SES-LACK varnish can be used safely, in accordance with the requirements of safety standard relating to the use of lacquers or flammable liquids (refer to safety data card).

Code marker cards with strips

Building on our great experience with SES-MARKERS®-code marker cards as wire markers, we have developed Vinyl covered cotton labels in the "SPOT-IT" series with the following properties:

Label protection with semi-rigid support cards on which markers are attached.

Labels can usually be removed without contamination of the adhesive due to a break-off tab or a pre-cut support.

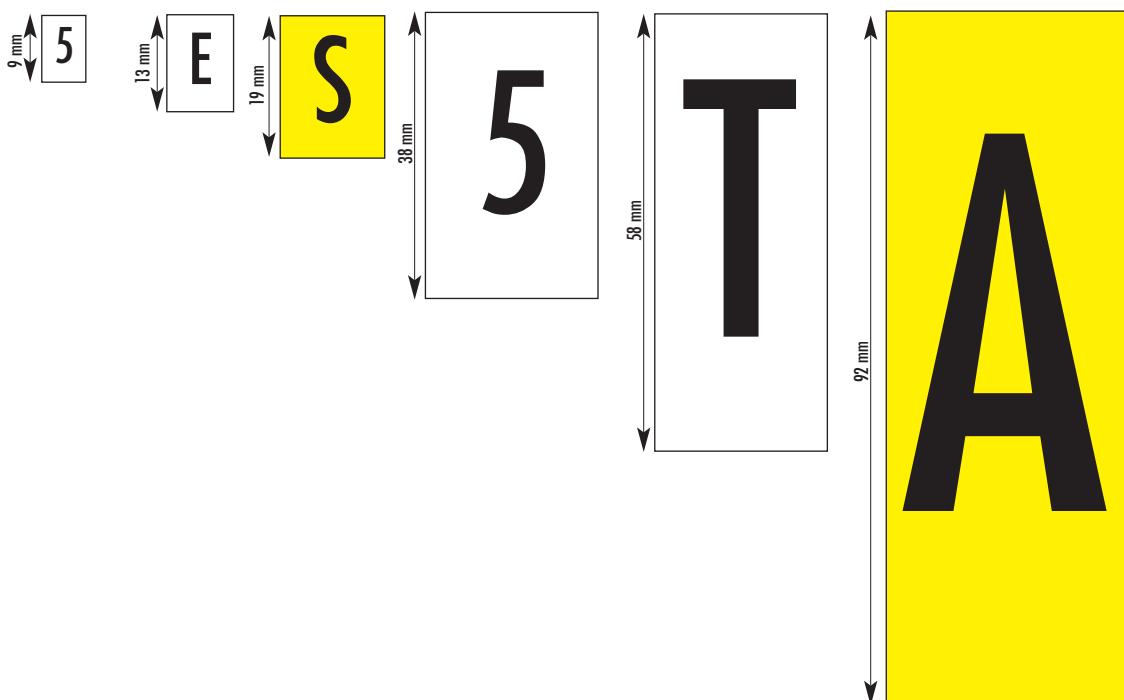

The support card is processed so that small and large labels can be easily removed.

"SPOT-IT" markers are available in many different standard sizes (detail in the following pages).

"SPOT-IT" markers can also be supplied in special sizes for a minimum order quantity of 10 per size and print.

Code marker cards for fluid pipes

Properties and advantages of cards for fluid circuits on aircraft

Self-adhesive strips on TEV (vinyl covered cotton) cards. To identify fluids with colours and conventional symbols to NF L 40-200 standard.

They are available in width of 25 mm (7 mm for the symbol) and in lengths of 58 - 140 and 280 mm.

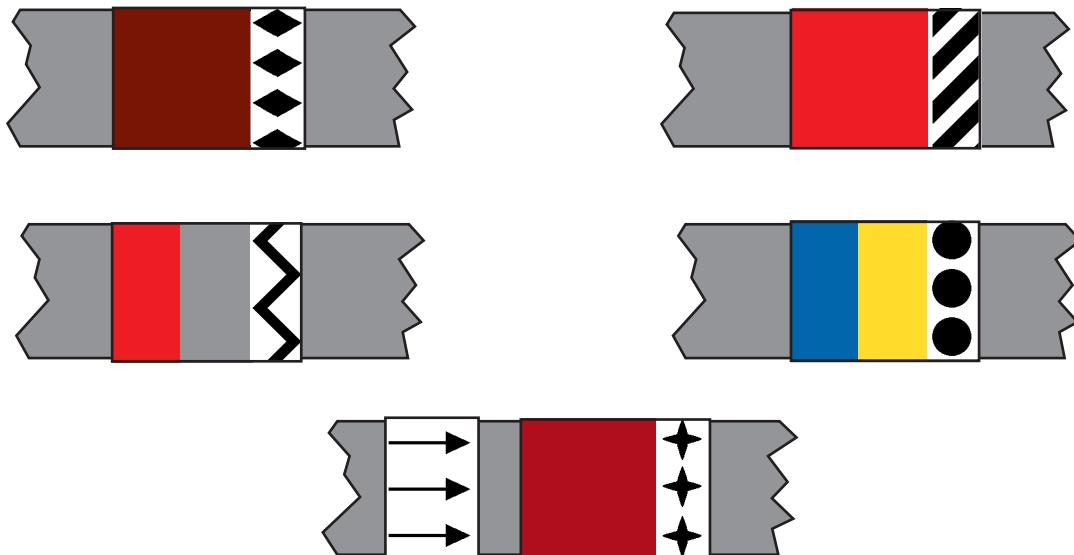

For ease of reading, alternate texts are inverted. Additional legends are available to indicate flow direction or danger (width 13 and 10,5 mm for the 3 lengths).

Every strip is fitted with a snap-off tab to avoid adhesive contamination when used .

Strips per card:	2- 4 and 11 strips*
Strip width:	25 mm
Strip lengths:	58- 140 and 280 mm
Strip thickness:	0,3 mm
Material:	TEV (vinyl covered cotton)
Adhesive:	special, thermo setting latex
Adhesion:	2,5 N/cm

* according to legend.

Tensile strength:	80 N/cm
Operating temperatures:	-30 to +105°C (class A)
	-40 to +150°C (short duration)
Temperatures of application:	+10 to +40°C
Minimum per type, fluid group and double exposure:	10 cards

LOCATION OF MARKERS:

"Markers shall be located at both ends of a pipeline component and at intervals along the pipeline. Identification points shall be selected so that when the pipeline is installed at least one marker is located adjacent to each servicing point and inspection door. Where a length of pipeline is less than 600mm and the installed pipeline may be readily traced, only one marker need be used."

(Extract from BS 5M 23 : 1987)

Identification systems PLIOGRAPH^{PLUS}

Designed for marking electrical conductors, wires and cables, the PLIOGRAPH^{PLUS} process includes different types of markers to be mounted in our tubes and marker holders.

Advantages of the PLIOGRAPH^{PLUS} identification system:

- Preparation of the marking in the **workshop or on site**.
- Identification **before or after connection**, without dismantling the cable, provided that the empty marker holders are fixed to the cable beforehand.
- Marker holders are **integral with the conductor** and fit perfectly on it.
- Completely **transparent** marker holders ensure excellent readability.

• Wands for PLIO SNAP +® markers

Particularly recommended for the location of cables on connector block, the PLIO SNAP +® markers can easily be placed on cables very close to another thanks to their assembly into the axis of the cable. PLIO SNAP +® markers can be put in position easily by placing the conductor in the flared end of the wand and the marker can then be pushed with the thumb on to the conductor.

The mounting wands have a base support so that they can be placed and will stay in a horizontal position and markings can therefore be easily identified.

PLIOCLIP

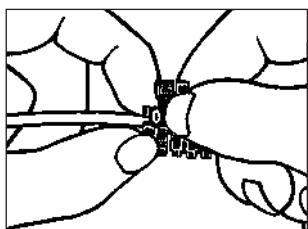

Material:	PA 6.6
Operating temperatures:	-30 to +100°C
Tensile strength:	65 MPa
Elongation at break:	300 %
Elasticity:	1300 MPa
Dielectric strength:	26 kV/mm
Flame resistance:	V2 UL94
Applications:	marking of wires and cables of Ø 2,2 to 6 mm (sections 0,5 to 6 mm ²) before or after connection. This marking system is equipped with a security locking equivalent to that of a closed ring.

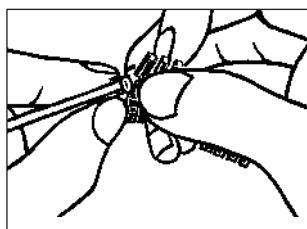

For PLIOCLIP marking, proceed as follows:

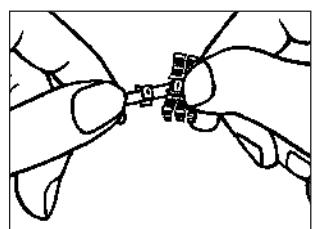

Take the whole strip to the cable.

Hold the strip with one hand. Turn the clip down with the thumb and the forefinger of the other hand to close it.

Pull the clip off the strip.

The PLIOCLIP is then in position - and the next marker can be applied.

Transparent lids for GN, GF-DIN and GF cable trunkings

GN - GF-DIN - GF

Lids

Material:	hard PVC
Colour:	transparent
Operating temperatures:	-20 to +60°C
Dielectric strength:	15kV/mm
Specifications:	V0 UL94
Standard length:	1 meter

Application: The transparent lids are designed for use with our GN-A6/4, GF-DIN-A7/5, GF-DIN-C-A12/8, GF-A12/8, GF-DIN-PPDA and GN-S cable trunking.

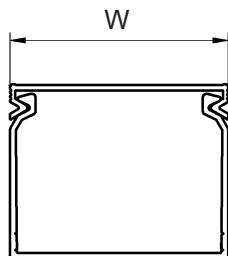

The transparency of the lids allows visibility and control of the integrity of the cables, particularly in the event of risk of intrusion by pests (rodents, etc.) without removing the lids.

Abbindegeräte

SES-STERLING hat auf dem Gebiet der HELAVIA® und SILAVIA Tüllen wie auch bei den Abisolierwerkzeugen eine grosse und langjährige Erfahrung. Die Abbindewerkzeuge und Abbindetüllen sind daher in Bezug auf Qualität und Anwendungsmöglichkeiten von hohem Niveau und werden den verschiedensten Ansprüchen gerecht. Die Sterling war in den dreissiger Jahren eine der ersten Firmen, die das damals bahnbrechende Verfahren entwickelt hat.

Das SES-Abbindeverfahren wurde oft kopiert, seine Qualität jedoch nie erreicht. Wir sind führend auf diesem Gebiet und bieten den Kunden das grösste Know-how.

Beim Herstellen der Werkzeuge der neuen Generation wurde besonders auf eine leichte Bedienung geachtet, um so den Ansprüchen gerecht zu werden. Spezielle Materialien und Oberflächenbehandlungen wurden dabei gewählt.

Wir haben viel Zeit darauf verwendet, bequeme, bedienungsfreundliche und möglichst universell einsetzbare Werkzeuge mit langer Lebensdauer zu entwickeln. Dies gelang uns dank unserer langjährigen Erfahrung auf diesem Gebiet.

Unser Produkt gewährleistet Ihnen eine Qualität, die Sie ganz zufriedenstellen wird.

Die Qualität und Präzision der Abisolierung von PTFE oder Kapton-Isolierungen ist sehr stark von den Abmessungen (Durchmesser, Stärke, Toleranzen) der Leitungen abhängig. Jedes Messer muss entsprechend der Norm, einschließlich aller Normversionen und Lieferantenspezifikationen angepasst werden. Ab sofort benötigen wir von Ihnen ein Muster der Leitung oder des Kabels, das sie abisolieren möchten, um das Messer anzupassen. Zukünftig liefern wir nur noch Messer passend zum gelieferten Musterkabel aus. Wir geben keine Garantie zur Verwendung der Messer mit anderen Leitungen oder Kabeln, die nicht dem Muster entsprechen.

Die stabil gebaute Abisoliermaschine FA-407 eignet sich zum schnellen und präzisen Abisolieren und Abmanteln von weichen oder harten, einadrigen oder mehradrigen Leitern.

Technische Eigenschaften:

- Motor 110/220 V 50Hz einphasig
- TÜV geprüft und CE konform
- In Frankreich hergestellt
- Gewicht: 9,3 Kg
- Maße der Maschine:
Länge 410 mm
Breite 220 mm
Höhe 220 mm (ohne Auslauftrichter)

Neu

Maschinenleistung:

- Rundkabel von Außen-Ø 1 bis 10 mm
- Alle Arten von Isolationen (mit entsprechenden Messern)
- Abisolier-/Verdrillungslänge von 4 bis 36 mm.
(Abisolieren auf einer Länge von 2 mm möglich, mit der optionalen Führungshülse)

Funktionsweise:

Der mit 3 Messern ausgestattete Kopf wird durch die Motordrehung angetrieben. Der Anwender schiebt das abzisolierende Kabel ein und betätigt dann den Griff. Die 3 Messer schließen sich dann um das Kabel. Sie schneiden die Kabelisolation ein und halten den geschnittenen Teil zurück, während der Draht zurückgezogen wird.

Die Maschine kann ebenfalls auf einer Werkbank befestigt werden.

Die Abisolierung ist schnell, leicht und präzise. Sie wird in zwei Punkten vollzogen:

- Zuerst stellt man den Isolierungsdurchmesser ein mittels eines graduierten Nonius, der die Schließung der Messer begrenzt.
- Dann stellt man die Abisolierlänge am zentralen Schub ein.

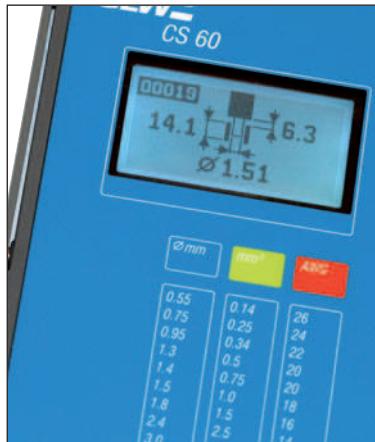

Das Betätigen der Messer kann entweder manuell oder mittels eines mechanischen oder pneumatischen Fußpedals durchgeführt werden.

Für weitere Auskünfte wenden Sie sich bitte an unsere technische Abteilung.

Wird nur in Frankreich und Deutschland verkauft.

Mit Komfort Abisolieren

Die elektrische Abisoliermaschine CS 60 ist sehr einfach zu bedienen.

Die Werte werden auf einem grossen Bildschirm angezeigt und das Diagramm ermöglicht eine intuitive Bedienung.

Die Steuertasten sind auf der Vorderseite der Maschine.

Die kurzen Abisolierlängen und der gut definierte Arbeitsbereich ermöglichen eine schnelle und mühelose Arbeit.

Die Spannkraft der Backen passt sich automatisch an die notwendige Abisolierleistung an, um zu viel Druck auf empfindliche Isolierungen zu verhindern.

Die Abisoliermesser sind so gebaut, dass sie eine zuverlässige Abisolierung garantieren.

Ein Zähler speichert die Anzahl der Arbeiten.

Dank Ihrem Gewicht und der Ausstattung mit einem Tragegriff, ist die CS 60 eine leicht zu bewegende, tragbare Maschine.

Das LC 100 Gerät erlaubt das Ablängen von starken Kabeln bis 2,5 mm², von weichen Kabeln bis 10 mm² und Tüllen und ähnliche Profilen bis maximal 8 mm Durchmesser.

Das LC 100 Gerät ist durch seine einfache Handhabung bestens geeignet für Muster und Serienfertigung.

Die sehr helle sensitive Tastatur ermöglicht eine schnelle Eingabe der gewünschten Länge und Menge.

Zwei angetriebene Transportrollen und zwei mitlaufende Messrollen garantieren eine präzise Schnittlänge und einwandfreien Schub.

Ein Materialwechsel ist denkbar einfach. Durch Abschwenken der Frontklappe werden Antriebs- und Messrollen automatisch auseinander bewegt. Das zu schneidende Material wird eingelegt und mit dem Schließen der Frontklappe positionieren sich Antriebs- und Messrolle automatisch.

Über die mitgelieferte Software können wiederkehrende Schneidaufträge am PC bearbeitet, dokumentiert und auf das LC 100 Gerät überspielt werden.

EC65

Länge: 320 mm
Breite: 140 mm
Höhe: 220 mm

Gewicht der Maschine EC65: 10 kg
Gewicht Fußschalter: 1,2 kg
Max. Crimpkraft: 10 kN
Crimpzeit: 1 s
Stückzähler: 6-stellige LCD-Anzeige
Netzanschluss: 230 V/50 Hz (120 V/60 Hz)
Leistung: 160 VA

Anwendung: Der EC65 ist die ideale Maschine, um Hülsen ohne Risiko zu vercrimpen:

- Quetschkabelschuhe oder Hülsen isoliert oder nicht isoliert bis zu 6 mm²/10 AWG
- Rohr und Quetschkabelschuhe
- Flachsteckhülsen bis 6 mm²/10 AWG
- Aderendhülsen
- ...

Die leichte und leistungsstarke EC65 Crimpmaschine ist ideal zum Gebrauch in der Werkstatt geeignet.

Die EC65 kann in zwei verschiedenen Betriebsarten benutzt werden:

- Betriebsart 1: Der Crimpkontakt wird durch Auslösen des Fußschalters verpresst.
- Betriebsart 2: Erlaubt dem Benutzer durch Auslösen des Fußschalters den Kontakt im Gesenk zu fixieren und den Leiter einzulegen. Erst durch erneutes Betätigen des Fußschalters wird der Crimpkontakt verpresst. Betriebsart 2 wird im Allgemeinen für die heikelsten Anwendungen benutzt.

Das Einsetzen der vollen Presskraft kann eingestellt werden. Dadurch werden Beschädigungen der Werkzeuge und Fehlcrimpungen durch falsch eingelegte Kontakte verhindert.

Es stehen zahlreiche Standardcrimpgesenke zur Verfügung. Sondergesenke nach Kundenwunsch sind ebenfalls möglich.

Für weitere Auskünfte wenden Sie sich bitte an unseren technischen Dienst.

Wird nur in Frankreich verkauft.

Kombizange zum Abisolieren und Crimpen von isolierten Aderendhülsen

**SES-JOKARI
QUADRO Plus**

SES-JOKARI QUADRO Plus ist eine Kombizange mit den Funktionen Schneiden, Abisolieren, Verdrillen und Crimpen in einem Gerät. Die verschiedenen Funktionen sind auf dem Zangenkörper von 1 bis 4 nummeriert, um die Bedienung zu erleichtern.

Schneiden: Ermöglicht das Schneiden von Drähten und Leitern mit Querschnitten zwischen 0,5 und 2,5 mm².

Abisolieren: Ermöglicht das Abisolieren von Drähten und Leitern mit Querschnitten zwischen 0,5 und 2,5 mm² mit automatischer Einstellung des Querschnitts.

Verdrillen: Nach dem Abisolieren können die Litzen verdrillt werden um ein Aufspleißen zu verhindern, so dass ein einfaches Einführen in die Aderendhülsen gewährleistet ist.

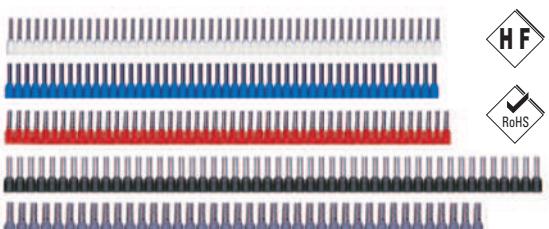

Crimpen : Das Crimpen von Aderendhülsen für Kabelquerschnitte von 0.5 bis 2.5 mm² wird durch leicht auswechselbare Magazine gewährleistet. Ein integrierter Verriegelungsmechanismus löst erst, wenn der Crimpstempel die Endposition erreicht hat und garantiert eine hohe Qualität.

Löt-Schrumpfverbinder

TTN

TTN

Material: vernetztes Polyolefin
innere Schicht, heißschmelzend

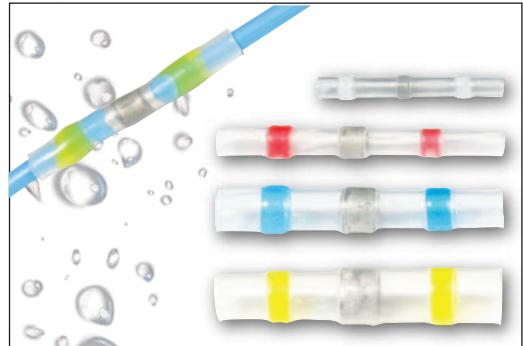

Temperaturbereich: -55 bis +125°C.

Schrumpftemperatur: +140°C

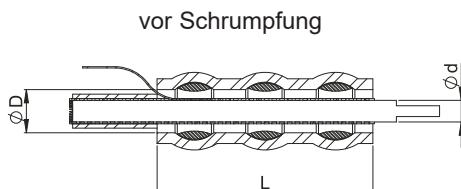

Anwendungen: Die Hauptfunktion der Löt-Schrumpfverbinder der TTN-Reihe besteht darin, Litzen und Abschirmungen miteinander durch Löten zu verbinden. Sie ermöglichen es, Metallgeflechte oder -bänder (z. B. von Koaxialkabeln) zu isolieren und nach dem Einführen eines Verbindungsdrähtes durch eine der beiden Seiten des Verbinder einen Masse- (oder Erdungs-) angeschluss sicher zu verbinden.

Nach vollständiger Schrumpfung, ohne Crimpen, ist die Lötverbindung sicher und gleichzeitig wasserfest durch den Innenkleber.

Einsatzbereiche: Masseübertragung (CEM - EMV) an abgeschirmten Kabeln, alle elektrischen und elektronischen Bereiche, Messungen, Kontrollen, Autoelektrik ...

Material: vernetztes Polyolefin
innere Schicht, heißschmelzend
Buchse aus verzинntem Kupfer

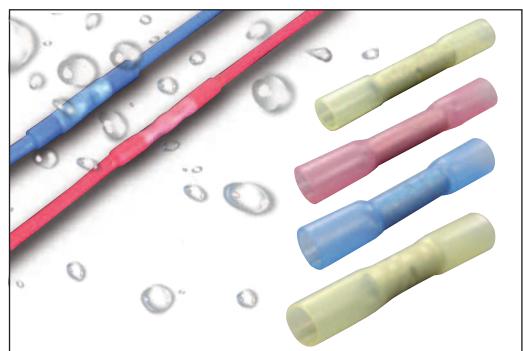

Temperaturbereich: +105°C maxi.

Schrumpftemperatur: +120°C

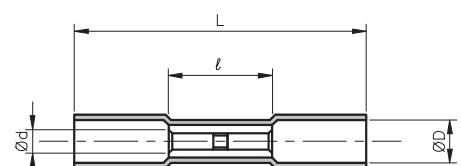

Anwendungen: Die Verbinder ermöglichen eine zuverlässige und wasserdichte elektrische Verbindung. Nach dem Crimpen wird die Isolierung mittels eines Heißluftgebläse geschrumpft.

Die Verbinder können mit den meisten Leitern verwendet werden, außer mit Glasfaser und solchen, die mit Silikon, Elastomer oder fluorierten Thermoplasten isoliert sind.

Einsatzbereiche: Schiff- und Automobilindustrie, Wasserpumpen, Haushaltsgeräte, Anti-Vibrations- und Anti-Staub-Anwendungen...

Lötzinn**Material:** 60% Zinnlegierung**Schmelzpunkt:** +183 bis +190°C**Spezifikation:** entspricht der Norm NFC 90550

Anwendung: Der Lötdraht hat vier innere Kanäle, die das Flussmittel enthalten. Rückstände müssen nach dem Löten nicht entfernt werden, im Gegenteil, sie bieten durch eine isolierende Harzablagerung einen zusätzlichen Schutz gegen Luftfeuchtigkeit.

Sollte diese Entfernung jedoch aus ästhetischen Gründen oder zur Erleichterung der Nachbearbeitung erforderlich sein, lässt sie sich sehr leicht mit einem in Industriekohol getränkten Tuch entfernen.

Das Vorhandensein der vier Kanäle ist der sicherste Garant für eine perfekte Kontinuität bei der Verteilung des Flussmittels.
